HARRIS RURAL ANNUAL

Seeds from the fower to the Sower

MORETON FARM COLDWATER, N.Y.

Hout Ourselves and Our Business.

HERE are some who will get this Catalogue who do not know us. To these the following information may be of interest: The business of seed growing was founded by the late Joseph Harris about thirty years ago. The first complete catalogue was issued in 1879, and one has been issued each year since that date. The business is now managed by his son, S. M. Harris, and is carried on at MORETON FARM, six miles west of Rochester, N. Y., near COLDWATER,

a station on the main line of the New York Central R. R. Shipments by freight and express are made from Rochester. The farm consists of 250 acres of highly improved land, containing miles of under-drains. It is devoted to the raising of Vegetable Seeds, Seed Potatoes, and Farm Seeds. We also have a flock of very fine pure bred COTSWOLD SHEEP, and raise pure bred White Wyandotte Chickens, and other Poultry.

Our Postoffice Address is

MORETON FARM, Coldwater, N. Y.

Postal Money Orders must be made payable to JOSEPH HARRIS CO., at ROCHESTER, N. Y. Our TELEGRAPH and EXPRESS Station (American) is COLDWATER, N. Y.

Books at Reduced Prices.

We can furnish the following Books, postpaid, at the Reduced Prices:

We can furnish the following Books, postpaid, at the Reduced Prices:

Talks on Manures. By Joseph Harris, M. S. New Edition. A practical and complete work on Manures and Fertilizers, contaning 40 chapters, 366 pages.

Gardening for Young and Old. By Joseph Harris. A work on the cultivation of vegetables and flowers. Illustrated.

"Harris on the Pig." By Joseph Harris. New Edition.

100 Nitrate of Soda as a Manure. By Joseph Harris, 90 pages.

100 Mushrooms—How to Crow Them. By Wm. Falconer.

100 Celery for Profit. By T. Griener. An excellent work on the subject.

New Onion Culture. By T. Griener. An excellent work on the subject.

80 Onions. How to Raise Them Profitably.

20 Spraying Crops. How and When to do it. By Prof. Clarence M. Weed.

25 Duck Culture. By James Rankin.

45 Spraying Crops, How and When to do it. By Froi, Dialence Lt. 1100 Duck Culture. By James Rankin Duck Culture. By J. Profits in Poultry Profits in Poultry.
Chemistry on The Farm. A book all farmers should read. It presents the relations of chemistry to agriculture in a plain and useful way.

Cardening for Profit. By Peter Henderson.
How to Make the Carden Pay. By T. Greiner. A complete book on gardening, from making a hot-bed to harvesting the crops—written by a practical man.

Terry's A B C of Potato Culture. This book thoroughly treats the subject of successful and profitable potato growing, and is well worth studying.

Kalamazoo Celery. Its cultivation and secret of success.

Cauliflowers, and Mow to Crow Them.

Mow Crops Crow. By Prof. Samuel W. Johnson. No one can properly understand fertilizing and cultivation of plants unless he knows the facts contained in this book.

Truck Farming in the South. An excellent work on market gardening in the South for the Northern markets.

SULPHO-TOBACCO SOAP—Kills Insects on Plants.

For killing aphides or lice on Roses and other plants we have found nothing so effective and con-For killing apindes of lice on Roses and other plants we have found nothing so effective and convenient as Sulpho-Tobacco Soap. The sulphur also prevents milder and keeps the plants healthy. It is very easily applied by dissolving in water and sprinkling on the plants. It is sure death to insects of all kinds and never injures the plants. The soap comes in cakes, which, when dissolved, make three gallons of wash each. This soap is also very effective for killing fleas on dogs. The animal should be washed, using this soap instead of ordinary soap. Full directions for use are printed on the cover of each cake. Price, postpaid, 20c. per cake, 3 cakes 50c. ORDER SHEET.

NOTE—The Postoffice at Coldwater does not pay Money Orders, so all Postal Money Orders should be made payable at Rochester, N. Y.

FROM THE GROWER TO THE SOWER.

It is not often that the man who sows seeds gets them from the man who raised them. Ninety out of every hundred pounds of seed used in this country are sold by dealers who are not growers. We are one of the very few seedsmen who raise any considerable portion of the seeds they sell. Of course, we do not raise all the seeds we sell-that would be an impossibility on one farm and in one locality. The more varieties sold, the smaller would be the proportion we could raise. That is one reason why we do not offer a long list of varieties. We aim to raise a few of the best varieties of each kind of vegetables rather than to sell all varieties that might be wanted. The longer we are in the seed business the more we are impressed with the necessity of raising a large portion of the seeds we sell. The seeds offered us by other growers and dealers are sometimes good and often very much cheaper than we can raise them ourselves, but on the other hand they are sometimes poor, mixed, and not true to name. The prices at which seeds are now grown makes it impossible to take the pains with them that is necessary to produce seeds of the highest quality and purity.

Raising the seeds as we do ourselves and selling them direct to the users, we are able to sell seeds raised with the greatest care at prices as low as other dealers charge for contract grown seeds, which are raised with as little expense as possible and without much regard to quality or purity.

THE SEED CROP OF 1899.

The season of 1899 was a most remarkable one in this locality. The winter was the coldest in many years and with very little snow, which caused the loss of much of our stock of roots, celery and cabbage, upon which we were depending for our crop of seeds. The spring was cold and backward and the summer was the driest on record. We planted our seed potatoes from the 9th to 15th of June. From that date until the middle of September no rain fell that moistened the ground more than an inch down. What few showers there were amounted to nothing at all. In consequence of this remarkable drought many crops were very poor. Beans produced a very small yield and will be even more scarce and higher in price than last year. Sweet corn here was a very small crop. New York State corn will be scarce this year. Beet and carrot seed nearly a failure. Cabbage seed not more than half an average yield, owing largely to the cold winter, which froze more than half the stock we had stored for seed. American grown seed will be scarce and high, but imported seed can be had at low prices. Cucumber, squash and tomato seed yielded poor crops. Peas are also not a full crop and will be considerably higher in price than last year. Onion seed was a fair crop. Early varieties of potatoes yielded very small crops—the smallest in a good many years. Late varieties yielded better but in this locality were not more than half an average crop. While the yields of many seeds were small the quality was most excellent.

SEEDS IN LIMITED SUPPLY.

Last year many of our customers were disappointed because when they ordered some varieties of seeds from us late in the spring we were obliged to return the money sent as our supply of the kind ordered was exhausted. We fear it will be the same this year. We regret to have to disappoint our customers, but we cannot make seeds, and when the crop is short there is no way of getting any more unless we buy from jobbers, which we do not want to do. We would advise our customers to order what they want as early as possible so as to be sure to get the seed. Our business has increased so much in the last few years that we have not been able to raise enough seeds to equal the demand.

NEW VARIETIES.

While we are not so anxious as some of our competitors to offer a long list of "Novelties" every year, yet we are always on the lookout for something better than we already have. In order to find out what is worth having and what is not, we make extensive trials every year of the most promising new varieties of vegetables and flowers offered both in this country and Europe. When we find a variety with some real merit we arrange to grow it and offer it to our customers. In this way we avoid offering varieties that are no beter than those we already have and asking our customers to pay three or four times as much for them.

VARIETIES WE HAVE INTRODUCED.

Nearly twenty years ago we introduced the Deacon Lettuce, which now has become a standard variety and is offered by all first-class seedsmen.

The Scotia Bean came later, and has become more popular every year on account of its superior quality.

The Potomac Tomato was first offered in 191 and although it is offered by but few seedsmen it has gained greatly in favor among our customers.

Harris' Short Stem Cabbage was originated a number of years before we started selling seeds. It has become so popular that some seedsmen have left off the 'Harris' and put their own name on instead. We have the original stock.

The Washington Potato is our latest introduction and is, we think, worthy of general culture.

WHAT A GARDEN SHOULD BE.

It is a fact to be regretted that in this country farmers and villagers do not, as a rule, have as good gardens as they should. Many farmers neglect the garden in order to possibly make a few more dollars out of some farm crop, with which they could not buy half the comfort and luxuries that they could get out of a well kept and well managed garden of suitable size. There is nothing that affords so much enjoyment, health and comfort for so little expense. A dollar or two spent for seeds; a little time now and then in the spring and summer and you have a constant supply of fresh green vegetables, beautiful flowers and abundance of fruit.

The trouble usually is that people do not plant enough of anything. One of the first vegetables to come in the spring is Asparagus. If you have not an asparagus bed do not fail to set one out this spring. There is nothing easier to raise and nothing more acceptable Next comes Peas. Of this delicious vegetable very few people sow enough. For a family of four or five people you should sow at least four quarts of peas, and six quarts would be better. The early smooth seeded kinds can be sown as soon as the frost is out of the ground and the sweeter, more tender kinds a little later.

Spinach is often sown in the fall, when it is one of the first green things we have to eat in the spring. But when sown early in the spring it grows fast and makes excellent "greens" quite early.

Wax and green podded Beans follow closely after peas. The newer green podded varieties, we think, are better than the wax kinds and are perhaps a little earlier. A pint each of early and late kinds with a few hills of Scotia (a most delicious late variety) will give a constant supply of "snap" beans.

Early Cabbage can be grown so as to be ready about this time. The plants should be started in a bot bed or box in the house in March.

Early Potatoes should be raised by those who have enough land. The earlier varieties are ready to eat 65 to 70 days after planting.

Sweet Corn, if the right varieties are used, will continue to furnish nice tender ears from July until frost. Earliest, second early and late varieties planted at the same time give good results. A second sowing of a second early or late variety is a good plan to prolong the season.

Cucumbers and Summer Squash are ready in midsummer.

Lima Beans, one of the most delicious of all vegetables, should be grown in liberal quantities. The dwarf varieties come early and are easily raised, but the tall, or pole varieties yield larger beans and more of them. For our own use we raise only the dwarf kinds, Henderson's for early and Burpee's for Main crop. A pint of the former and a quart or quart and a pint of the latter will give a good supply of beans.

Tomatoes, of course, must be had in abundance. A dozen plants of an extra early kind and forty or fifty plants of a later kind are none too many.

Cauliflower can be had both early and late, but it has been our experience that it is best to have the plants head in September and October rather than earlier. After the frost comes there are fewer vegetables and then cauliflower is much appreciated. It is easily raised on any moist piece of land.

Cetery is not raised as much as it should be. When almost all other green vegetables are gone nice crisp, tender celery is a great addition to the dinner table. The principal difficulty in raising it is to get good plants. If you have no suitable place to raise them send to us for a hundred or two. The order can be sent when you order seeds and the plants will be sent at the proper time to set them out.

Brussels Sprouts are very acceptable late in the fall. They are as easily raised as cabbage.

Turnips and Cabbage are, of course, essential to a good garden.

Parsnips and Salsify can be used both in the late fall and early spring, or whenever they can be dug in the winter. They are better for being left in the ground nntil frozen.

Lettuce should be had early and late. The early crop is best raised by sowing the seed in a box in the house or in a hot bed in February or March, and the plants set out in the open ground as soon as warm enough. For later use the seed can be sown in the open ground at various times to keep up a constant supply.

Radishes should be sown in the same way.

Musk Melons should not be omitted. They are delicious fruit. If you have a nice piece of sandy loam not shaded you can raise fine musk melons.

As to Flowers you will find some suggestions at the beginning of that department in this catalogue.

It is hardly necessary to say that a successful garden cannot be had without good seeds. Too many people depend upon a few packets of seed purchased at the corner grocery and have to go without vegetables because half the seed did not grow or was of some inferior or worthless variety. It is most discouraging to go to all the trouble of preparing the ground and sowing the seed only to have it prove worthless. We test all seeds before they are sold and never send out any that do not grow satisfactorily. Besides this all our seeds are raised with the greatest care to have them pure and of the best possible strain, so we can confidently recommend them.

THE CULTIVATION OF VEGETABLES AND FLOWERS.

We have hitherto given brief directions for cultivating vegetables and flowers in our catalogue. The space was necessarily very limited and the directions probably not long and explicit enough to be of much value to our customers. We have, therefor, decided to omit these directions from our catalogue, and in place of them to send with every order amounting to 25 cents or more a pamphlet devoted entirely to this subject. This pamphlet tells:—

How to Make a Hot-Bed. How and When to Sow

all the different kinds of seeds, and care for the crops. Also remarks on

Potato Growing, and Fertilizing Garden and Field Crops.

It contains as much useful information as many books costing 25 cents to 50 cents. It is given free with every order amounting to 25 cents or more. The pamphlet will be sent with the seeds, so you will have the directions for sowing the seeds when you receive them.

OUR FACILITIES.

We have 250 acres of first-class land near Rochester, N.Y., on the New York Central Railroad. Mail is received and dispatched twice daily. We get our letters more promptly than if we were doing business in a large city.

FREIGHT SHIPMENTS are made from Rochester; where we have the following railroads:

New York Central, main line and three branches. Lehigh Valley.

Buffalo, Rochester & Pittsburgh.

West Shore.

Erie. Rome, Watertown & Ogdensburg.

Western New York & Pennsylvania.

Also the following express companies:

American, National, United States, Wells, Fargo & Co. We can therefore get the lowest freight and express rates to all points.

On seeds and plants shipped by express we get special rates, which are often much lower than the regular rate.

SPECIAL OFFERS AND DISCOUNTS.

NYONE sending us an order amounting to \$1.00 for seeds in Packets and Ounces may select 50c worth of seeds in Packets in addition, which will be sent Free. But it must be distinctly understood that this offer only applies to orders for seeds in Packets and Ounces and the additional seeds must be

Hil in Packets (no ozs., 1-4 lbs., 1-2 pints, etc., included). If you want any seeds such as Peas, Beans or Corn in pints and quarts, these should be ordered in addition to the seeds in packets and ounces and the full catalogue price sent for them. This offer includes both Vegetable and Flower Seeds. We think we have stated this plainly. We Will not Send seeds in larger quantities than packets for the free 50c worth, nor will we send the free seeds unless \$1.00 worth of seeds in Packets and Ounces only are ordered and paid for. This is a most liberal offer and is made to induce more people to try our seeds. Instead of buying collections made up of packets of seeds, many of which you may not need, you can order just what you want from us and really pay no more for them.

DISCOUNT ON LARGE ORDERS.

We will allow a cash discount of 10 per cent. on orders for Vegetable and Flower Seeds amounting to 510.00 or more, excepting Peas, Beans and Corn at bushel rates. This offer does not include orders for Potatoes, Farm Seeds, Fertilizers, Poultry, or Eggs. Orders for Plants in small quantities may be included.

Our prices we think will be found as low as carefully grown seeds can be sold this year and the above discount will therefore be a direct saving in cash.

CLUB ORDERS.

A New and Very Liberal Offer.

We have for a number of years allowed a discount of 10 per cent. on all club orders, however small. This we will continue to do. But in addition to this cash discount if the combined orders amount to \$5.00 or more we will give the sender of the club order \$1.00 worth of seeds or plants of his or her own selection, free of all charge. That is by getting up a small club among your neighbors you not only get 50c cash commission but you also get \$1.00 worth of seeds or plants free. If the club order amounts to \$10.00, \$2.00 worth of seeds may be selected in addition to 10 per cent. cash discount. The names and addresses of the members of the club must be sent with the order.

If the seeds are heavy they can be sent by freight at a very small cost, and we will do up each order separately with the name of the person for whom it is intended marked on the package, and send the whole, securely packed, to the person sending the order; or, if the seeds are to be sent by mail, we will send each order direct to the person ordering the seeds without any further trouble to the person getting up the club. Extra catalogues and order sheets will be sent if wanted.

MARKET GARDENERS AND LARGE BUYERS.

If any who want a considerable quantity of seeds will send us a list of the kinds and quantities required, we shall be glad to quote the lowest possible prices for the seeds or plants. It sometimes happens that we can make a little lower price on some things than quoted in catalogue.

POINTS TO REMEMBER.

ALL SEEDS TESTED.

Many seeds that are sold—especially those placed on sale in country stores—are so old or poor that they will not grow. There is no excuse for a seedsman who sends out such seeds. It is, however, often done through carelessness rather than with intention to defraud. But such carelessness brings serious losses upon the planter of the seeds. In order to be absolutely sure that the seeds we offer will grow, every lot of seed—whether it be our own growing or imported—is TESTED, to show that the recent, will grow. Any seeds that do not just what per cent, will grow. Any seeds that do not make a satisfactory showing are thrown away. We know, therefore, that all the seeds that we send out will grow.

WE GUARANTEE

That our seeds will grow, and are pure and true to name, in so far as should any prove otherwise, we will return the money paid for same or replace with good seeds. Our seeds are all thoroughly tested before being sent out, so that we know that they will grow.

PRICES.

We quote two sets of prices in this catalogue. The prices in the body of the catalogue include postage. When seeds are ordered at these prices they will be sent by mail or express at no cost to the purchaser.

We also give a price list of seeds without the postage added. This price list will be found at the end of the vegetable seed department. When seeds are ordered at these prices we do not pay the postage, express or freight charges. When heavy seeds are ordered and the distance

to be sent is short it is usually much cheaper to have them sent by express or freight and pay the charges than to have them sent by mail. For long distances mail is often cheaper than express.

HOW TO ORDER.

1st. Please Use the Order Sheet that will be found attached to this Catalogue.

2d. Fill in your Name, Postoffice, County and State, and if you wish any of the order sent by express or freight, give your nearest express office or railroad

3d. How to Send Money.—The money must in all cases accompany the order. We will assume all the risks of the money reaching us if it is sent in the form of a postoffice money order, express money order, draft on New York, or in a registered letter, to the amount of \$10.00, or to the amount of \$1.00 in an ordinary letter, Fractions of a dollar may be sent in postage stamps.

Postoffice Money Orders should be made payable at Rochester, N. Y., (not New York City).

4th. Seeds Sent by Express C. O D.—If one-third the amount of the order is sent we will forward the seeds by express and collect the balance on delivery. We cannot send anything by freight C. O. D., except by making sight drafts, which involves a good deal of trouble both to ourselves and the purchaser.

5th. When Seeds are Ordered by Freight, and there are a few seeds that you want early for a hot-bed, you had better order the seeds for the hot-bed by mail. The postage is very little.

Moreton Farm Vegetable Seeds for 1900.

"NOVELTIES."

In the following catalogue will be found many new and improved varieties which we have found by actual trial to be of value. They are not separated from the rest of the catalogue as many seedsmen arrange their "novelties," but are placed under their proper heads. All the new varieties we introduce into our catalogue are of special merit and are not offered merely because they are new. Many of the new things sold every year at high prices are not as good as the old varieties.

Seeds Delivered to Purchaser Without Extra Charge.—When seeds are ordered at the prices quoted in the following list, we deliver the seeds by mail or express prepaid, without extra cost to the purchaser, unless otherwise stated. In comparing our prices with those of other seedsmen who make an additional charge for postage, this fact should not be overlooked.

Market Gardeners and others who use seeds in large quantities will do us a favor by sending us their list of wants for a special estimate. We can often make a considerable reduction on some varieties of which we chance to have a surplus.

For Prices of Seeds in Larger Quantities, see Price List at end of this department.

50 CENTS WORTH OF FREE

Anyone sending us \$1.00 for Seeds in Packets or Ounces only, may select in addition seeds in PACKETS to the amount of 50c more, thus getting \$1.50 worth of seeds for \$1.00. Please notice that this offer is for seeds ordered in Packets and Ounces only, and does not apply to those ordered by the half-pint, pint, quarter-pound or pound. We will not send the extra seeds unless

\$1.00 is sent for seeds in packets and ounces only, and only packets will be sent for the extra seeds.

ASPARAGUS.

One ounce will sow 50 feet of row.

ASPARAGUS SEED.

Columbian Mammoth White—A new variety, the shoots of which are naturally white, which makes it very desirable for market, where it brings the highest prices. About three-fourths of these plants from seed are true. Lb. \$1.00, ½ lb. 30c., oz. 15c., pkt. 10c.

Conover's Colossal—Lb. 35c., ¼ lb. 15c., pkt. 5c. Palmetto—Large and vigorous. Lb. 50c., ¼lb. 18c., pkt. 5c.

ASPARAGUS ROOTS.

We have long made a specialty of Asparagus Roots, growing them on a very large scale. Asparagus is easily grown and is a most welcome vegetable in the spring. A bed once established will last for 20 years, 100 roots will set out 200 feet of row. The rows should be 3 or 4 feet apart. It is much less trouble to start an asparagus bed than most people think. The land requires no special preparation and the roots are easily set out. Directions for culture sent with every order for roots or seed.

There are a dozen so-called varieties of asparagus, out we have never been able to see any real difference between them. The Michigan Experiment station has tried all the varieties offered for a number of years, and reports that there is no apparent difference between them, with the exception of Palmetto, which appears to be larger and more vigorous than the others, and the Columbian Mammoth White, which has naturally very light green or white stalks.

Price of Asparagus Roots.

1-year-old roots, postpaid, per doz. 20c., per 100 \$1.00, 2-year-old roots, postpaid. per doz. 30c., per 100 \$1.50. 1-year-old roots, by express or freight, per 100 75c., per 1000 \$3.50.

2-year-old roots, by express or freight, per 100 85c., per 1000 \$4.50.

Columbian Mammoth White.

1-year-old roots, postpaid, per doz. 30c., per 100 \$1.00. 2-year-old roots, by express or freight, per 100 \$1.00, per 1000 \$6.00.

Special prices given on larger quantities.

BEANS.

A quart will plant 150 feet of row.

NEW VALENTINE WAX. THE EARLIEST WAX BEAN.

We have tested this bean for three or four years in comparison with all the early varieties, both new and old, and are convinced that this is still the earliest wax bean. The pods are long, nearly round, thick, and of a deep, clear yellow. It is as nearly "rust proof" as any Wax Bean we have ever grown, being very little affected when others were nearly ruined. Being a direct descendant of

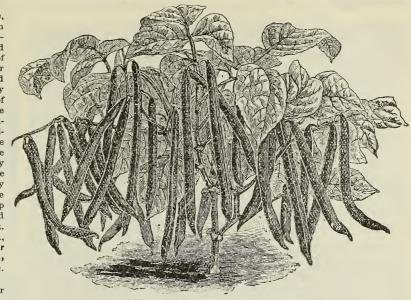

the well-known Valentine Bean, it has the remarkable prolificness of that variety, which makes it the most profitable variety for market or canning. In quality it is first-class, being much superior to the Golden Wax. The dry beans are light red like the Valentine. We advise everyone to plant this bean, either for home use or market. Qt. 40c., pt. 22c., ½ pt. 12c., pkt. 5c., By Freight or Express, not prepaid, quart 25c., peck \$1.60, bushel \$6.00.

NEW STRINGLESS GREEN-PODDED BEAN.

It is the earliest green-podded bean. It has absolutely stringless pods. It is of the most superior quality, surpassing all other early bush beans, both wax and green-podded, in this respect. It is very prolific, free from rust and blight.

This bean, we are sure. will be found superior in every way to the Valentine and Refugee, and will take the place of these varieties both for market, home use, and canning. It is not only earlier than Valentine of the earliest strain but the pods are larger, handsomer and of better quality, and the plant is more vigorous and prolific. We advise gardeners to try this bean. It will be found profitable. Every one who wants a fine flavored, tender snap bean for home use should plant this variety. Qt. 40c., pint 22c., ½ pint 12c., pkt. 5c. By freight or express, not prepaid, qt. 25c., pk. \$1.60, bu. \$6.25

Special prices on larger quantities.

NEW STRINGLESS GREEN-PODDED BUSH BEAN.

STANDARD VARIETIES OF DWARF BEANS.

WARDWELL'S KIDNEY WAX BEAN-This is one of the very best Wax Beans. The pods are long, straight and handsome, and bright yellow from the very beginning. The vines are very vigorous and productive and free from rust. Earlier than Golden Wax or Black Wax and most other varieties. We highly recommend this bean for either family use or market. Qt. 45c., pt. 23c., ½ pt. 12c., pkt. 5c.

CLEVELAND'S IMPROVED VALENTINE BEAN. This is a great improvement on the old Valentine,

being not only of better quality and more productive but a week or ten days earlier. The pods are perfectly round, thick-fleshed, solid and nearly stringless, and are of the finest quality. Qt. 45c., pt. 23c., 1/2 pt. 12c., pkt. 5c.

CRYSTAL WAX-The best quality of any Wax Bean. Pods round, solid, and nearly transparent. Cooks tender, and is of delicious flavor. This is a late variety excellent to follow after the earliest kinds. Qt. 50c., pt. 25c., ½ pt. 15c., pkt. 5c.

Golden Wax-The standard market variety. Qt. 40c.,

pt 22c., ½ pt. 12c., pkt. 5c. Black Wax-The old "Butter Bean." Quality excellent but the vines are not prolific. Qt. 45c., pt. 23c.,

22c., ½ pt. 12c., pkt. 5c.

Early Mohawk-Green pods. Qt. 40c., pt. 22c., ½ pt. 12c., pkt. 5c.

½ pt. 12c., pkt. 5c. Refugee, or 1,000 to 1-Used largely for canning and pickling. Qt. 40c., pt.

POLE BEANS.

Golden Cluster Wax-Very prolific; pods long, golden yellow, and of finest quality. Commences to bear early and continues until frost. Qt. 60c., pt. 35c., ½ pt. 20c., pkt. 10c.

Speckled Cranberry, o London Horticulturalondon Used largely for succotash. Qt. 55c., pt. 30c., ½ pt. 18c., pkt. 10c.

Scarlet Runner-Makes beautiful screens 10 to 12 feet high, with abundance of scarlet blossoms. Pods excellent for the table. Qt. pt. 35c., ½ pt. 20c., 60c., pt.

BURPEE'S BUSH LIMA BEANS .- See description next page.

POLE VARIETIES OF LIMA BEANS.

King of the Carden-The largest and best filled pods; very productive. Qt. 45c., pt. 25c., ½ pt. 15c:, pkt. 10c.

Large White Lima-Choice seed. Qt. 45c., pt. 25c., 1/2 pt. 15c., pkt. 10c.

BUSH VARIETIES OF LIMA BEANS.

BURPEE'S BUSH LIMA BEANS-The Bush Limas are fast replacing the tall or pole varieties. The beans are just as good and are very much easier to raise. Burpee's Bush Lima grows only 18 inches high, and is no more trouble to raise than dwarf wax beans. The pods and beans are nearly if not quite as large as the pole varieties and of equally good quality, and about a week earlier. Bears until frost. Everyone should plant at least a pint, and a quart would be much better. Qt. 50c., pt. 25c., 1/2 pt. 15c., pkt. 10c. By freight or express, Qt. 35c., peck \$2.00, bushel \$7.50.

HENDERSON'S BUSH LIMA-Smaller, but two weeks earlier than Burpee's, and wonderfully productive. When sown at the same time they give a supply of beans from the earliest possible date until frost. These small beans are of the finest quality. Qt. 45c., pt. 25c., ½ pt. 15c., pkt. 10c,

WHITE FIELD BEANS.

Boston Small Pea Bean-Very productive. Qt. 35c., pt. 20c., ½ pt. 12c., pkt. 5c. Boston Marrow-Beans large; cook dry and mealy. Qt. 85c., pt. 20c., ½ pt. 12c.,

Marrow Pea, or White Navy-The earliest white bean. Qt. 35c., pt. 20c., 1/2 pt. 12c., pkt. 5c.

THE SCOTIA BEAN.

The Finest Flavored, Tenderest and Most Delicious Snap Bean.

We want everyone who appreciates a really good "snap" bean to try the Scotia, We know of no bean that equals it in tenderness and fine flavor. The pods are long, perfectly round, solid, and perfectly stringless, and light green in color. The vines are wonderfully productive and inclined to run, so that they can be grown on poles or allowed to run on the ground, as most convenient. When only a few hills are grown it is best to give them a pole to run on.

The beans are very distinct in appearance, and we have never seen anything like them. We have hundreds of testimonials as to their quality and productiveness from all parts of the country. All who have tried them are enthusiastic in their praise. Qt. 60c., pt. 32c., 1/2 pt. 20c., pkt. 10c.

Mr. Thos. Rathbone, Hyattsville, Md., writes: "Your Scotia Bean gave great satisfaction last year. It not only bore profusely, but continued bearing until after the first frost. Last picking made in December."

One ounce of seed will produce 1,000 plants.

As Easily Cultivated as Cabbage.

BRUSSELS SPROUTS-Half Dwarf Paris Market.

stem of the plant, as shown in cut, and are like miniature heads of cabbage, about as large as the end of your thumb, but sometimes larger. These little heads are picked off in the fall and winter, and cooked like cabbage. Brussels Sprouts are becoming very popular, and are profitable to grow for market. There is always a good demand for them.

vigorous grower, with unusually large and very solid sprouts. Lb. \$2.00, 1/4 lb. 60c., oz. 20c., pkt. 5c.

BEANS. PEAS AND CORN IN BULK.

See Price List at end of this department.

One ounce of seed will sow 60 feet of row -10 pounds per acre in rows 18 inches apart.

CROSBY'S **IMPROVED** EGYPTIAN BEET.

This is an improved strain of the well-known and popular Egyptian Blood Beet. The beets are flatter than the Eclipse, very dark red all through and of the very finest quality. They mature extremely early and have very small tops. Being flatter than Eclipse they get to a bunching size and shape earlier than that variety. We highly recommend this beet. Lb. 50c., 1/4 lb. 16c., oz. 8c., pkt. 5c.

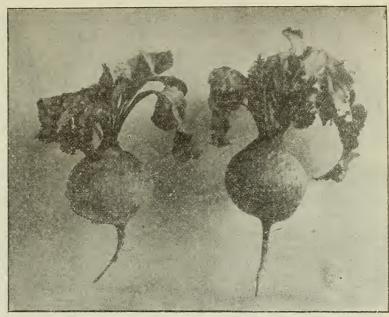

ECLIPSE BEET.

An Extra Fine Strain.

There are new beets introduced every year, but we have found none superior to our strain of Eclipse. It is one of the earliest and handsomest beets in existence. The beets are globeshaped, smooth, and with very small top, and are of the best quality. Lb. 45c.,

1/4 lb. 15c., oz. 8c., pkt. 5c. Extra Early Bassano - Very early; of excellent quality. Lb. 45c., ½ lb. 15c., oz. 8c., pkt. 5c.

Early Blood Turnip—We have an excellent strain of this old favorite. Lb. 45c., 1/4 lb. 15c., oz. 8c., pkt. 5c.

CROSBY'S IMPROVED EGYPTIAN BEET.

ECLIPSE BEET

Bastian's Blood Turnip-A very large early beet of excellent quality. Its size recommends it for market. Lb. 45c., 1/4 lb. 15c., oz. 8c., pkt. 5c.

Long Smooth Blood Red-Roots long, smooth and very dark red. Lb. 45c., 1/4 lb. 15c., oz. 8c., pkt. 5c.

Mangel Wurzels and Sugar Beets.

Most Economical and Valuable Food for Cattle and Sheep. Note Our Prices for Seed.

There is no crop more valuable for feeding cows and sheep than Mangels and Sugar Beets. Considering the fact that it is easy to raise from 40 to 45 tons or more per acre and that the whole root is perfectly digestible, there being no waste as is the case with cornstalks or other coarse fodder, there is no food more economical. Not only this but cows fed on mangels during the winter will give more and better milk than they will on any other food. Sheep also are much healthier and ewes with lambs give more milk and therefore raise better lambs than if fed only dry food. It is the poorest kind of economy to try to get along without them. We are glad to observe that there are more and more being raised every year as stock raisers learn their value.

The raising of mangel seed has long been one of our specialties. The first seed that we raised and sold, over twenty years ago, was Harris' Yellow Globe Mangel.

We offer this year some very fine fresh Mangel and Sugar Beet Seed at prices lower than ever before Sow seven to ten pounds of seed per acre. If rows are 2 feet apart it will require about 8 lbs. per acre. Sugar beets should be thicker than mangels, as they do not grow so large.

TABER'S CATE-POST-This is a new yellow mangel, longer than the Globe, and yields immense crops, while the quality is superior to the old red kinds. The roots are smooth, solid, and keep perfectly all winter. Tops small for the size of the roots, which often weigh 40 pounds. Lb. postpaid, 40c., 1/4 lb. 15c., pkt. 5c. By express or freight, lb. 30c., 5 lbs. or more, 25c. per lb.

Mammoth Long Red or Norbiton Clant-The best long red mangel. Yields enormously. Lb. 30c., 1/4 lb. 12c., pkt. 5c.; 5 lbs. or more by express or freight, 16c. per lb.

Harris' Yellow Clobe Mangel-The finest strain of Yellow Globe Mangel in existence. Roots perfectly round, smooth, and with very small top. Will keep better than any other variety. Lb. postpaid, 30c., 1/4 lb. 12c., pkt. 5c.; 5 lbs. or more by express, not prepaid, 18c. per lb.

Golden Tankard-Large size roots, deep yellow all through and of rich quality. Lb. 30c, 1/4 lb. 12c., pkt. 5c.; 5 lbs. or more by express or freight, 17c. per lb.

Vilmorin's Improved Sugar Beet-The richest in sugar, often containing 14 per cent. Seed from the originator. Lb. 45c., 1/4 lb. 18c., pkt. 5c.

Other varieties on next page.

MANGEL WURZELS-Continued.

ciant yellow intermediate mancel—This mangel combines more good points than any other variety we have ever grown. The shape is shown in the cut. The fiesh is yellow, fine grained and nutritious. In a test of six of the leading varieties, the Giant Intermediate led them all, giving a yield of 1,800 bushels per acre. The roots are smooth, grow more than half above ground and are easily harvested. Lib. postpaid, 30c., ½ lb. 12c., pkt, 5c.; 5 lbs. or more by express or freight, 16c. per lb.

IMPERIAL SUGAR BEET—The best sugar beet to grow for stock. Roots large, smooth and very rich. Being much richer in sugar, their feeding value is nearly double that of the large-growing mangels. Grows partly out of the ground. Is easily harvested and yields large crops. Lb. 30c., ½ lb. 12c., pkt. 5c.; 5 lbs. or more by express or freight, 16c. ner lb.

Lane's Improved Sugar Beet—A fine strain of sugar beets for stock. Lb. 35c, ¼ lb. 15c., pkt. 5c.; 5 lbs. or more, by express, not prepaid, 20c.

CAULIFLOWER.

One ounce of seed will produce 1,500 to 2,000 plants if sown in open ground or about 3,000 in frames.

THE IMPORTANT POINT IN RAISING CAULIFLOWERS.

There is nothing so essential to success as good seed. The best cauliflower seed is very expensive, but it is worth to the grower ten times as much as cheap and carelessly grown seed. We get the best results from using Snowball or Erfurt Earliest Dwarf for main late crop, as well as for early use. These two strains of seed, as we have them, are grown with the greatest care, and 99 per cent. of the plants will produce fine, compact heads of good size.

Mr. J. Mort Hardy, Watertown, N.Y., says: "We think we have the best cauliflower from your strain of seed that we ever saw, having taken the first premium at the Jefferson County Fair for several years, (every year since we had your seed). But we can say more—we have raised two heads from one plant and last year cut three, one at first and then two came out, and they all sold at the same price, 10c. each, wholesale. What strain can beat that?"

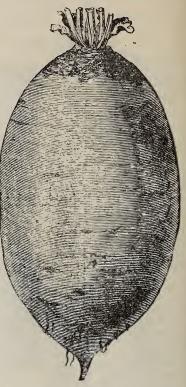

Mr. S. M. Long, East Winthrop, Me., says: "The Erfurt Earliest Cauliflower I got of you was as fine as I ever raised, and every plant headed."

ERFURT EARLIEST DWARF CAULIFLOWER.

ERFURT EARLIEST DWARF CAULIFLOWER.

This cauliflower is sold under a great many different names, as nearly every seedsman has a name for it with his own attached. But we do not see that the names improve the cauliflower. At any rate there is certainly nothing finer than the strain we offer. The heads are very compact, snowy white, well covered with leaves, and of large size, and every plant will form such a head when given good culture. For forcing early in the spring it has no equal; and by sowing the seed at different times cauliflower can be obtained as early or as late as wanted. We offer the finest seed grown at the following reduced prices: Per ½ 1b. \$8.00, oz. \$2.50, ½ oz. \$1.40, ¼ oz. 75c., pkt, 15c., 2 pkts, 25c.

GIANT YELLOW INTERMEDIATE MANGEL.

SNOWBALL CAULIFLOWER.

Very Fine New Seed at Reduced Price.

This variety is very similar to Erfurt Earliest Dwarf but with, perhaps, somewhat smaller leaves. We have the *genuine seed* of the *purest strain* of this variety. Nearly every plant will form a fine compact head. We have this year a lot of seed grown for us in Europe that is unusually fine and of strong vitality. We offer it at the following reduced prices: Per ½ lb. \$7.00, oz. \$2.00, ½ oz. \$1.10, ½ oz. 65c., pkt. 15c, 2 pkts. 25c.

ERFURT EARLY DWARF—Not quite as early or fine as Erfurt Earliest Dwarf, but is an excellent variety both for early and late crop. It is very reliable in regard to heading, and the heads are solid and compact, 1/4 lb. \$6.00, oz. \$1.75, pkt. 10c.

Early Paris-An old favorite. Per 1/4 lb. \$2.00, oz. 60c., pkt. 10c.

Walcheren-Large, late and very hardy. Will stand considerable frost. ¼ lb. \$2.00, oz. 60c., pkt. 10c.

LARGE ALGIERS—One of the best large late varieties. Heads of the largest size white and compact. A very reliable header. 1/4 lb. \$3.50, oz. \$1.00, pkt. 10c.

Large Lenormand Short Stem— Large and vigorous grower. ½ lb. \$2.00, oz. 60c, pkt. 10c.

Cress, or Peppergrass.

Sow early in the spring in rows a foot apart. Sow at intervals of two weeks for succession.

EXTRA FINE CURLED—The best variety. Lb. 40c., ½ lb. 15c., oz. or 3 pkts. 10c., pkt. 5c.

True Water Cress—Sow it in the greenhouse or scatter the seed on the side of a ditch or shallow stream where there is running water. Lb. \$3.50, ½ lb. \$1.00, oz. 35c., ½ oz. 20c., pkt. 10c.

CABBAGE.

One ounce of seed will produce 1,000 to 2,000 plants sown in the open ground, or 3,000 if sown in frames.

It requires about 6 oz. of seed to produce plants for an acre of ground.

RAISING CABBAGE SEED IS ONE OF OUR SPECIALTIES.

Being situated in one of the best cabbage growing regions of this country, we have long made a specialty of raising cabbage both for seed and market. We have thus been able by selecting the very finest heads for seed to breed up some very fine strains of cabbage that will satisfy the requirements of the most critical grower.

The crop of seed this year is very small and prices for fresh seed of the finest strains are necessarily high. There will be a lot of cheap imported seed offered, but the man who buys it will know better next time.

There is nothing so essential to successful cabbage raising as well-bred seed. In order to get large crops, nearly every plant must produce a good solid head. If the seed has not been raised with great care there will be many "sports" or imperfectly formed heads, which will detract from the yield and profit. Of course, the most carefully grown seed will not produce a crop unless given proper management, but if the seed is not well-bred the best of land and the greatest pains in cultivation will not produce a first-class crop.

We could buy cabbage seed at 30c, per lb. but it would not produce a crop like that shown in the photograph below which was raised from our selected seed. It never pays to sow cheap seed of any kind, but cheap cabbage seed should be avoided as you would the small-pox.

HARRIS' SHORT STEM CABBAGE. RAISED FOR SEED AT MORETON FARM.

Our Special Improved Strain of EARLY JERSEY WAKEFIELD.

We have a very fine strain of this variety, which heads the earliest and most uniformly of any cabbage. The heads are of good size, very solid, and with few outside leaves. We recommend this strain to market gardeners as the very best. Crop of seed of this variety almost an entire failure this year. The price is consequently higher than usual. Lb. \$3.75, ½ lb. \$1.00, oz. 30c., pkt. 10c.

BURPEE'S ALL-HEAD EARLY.

This is a large, early cabbage, much resembling Henderson's Summer, but somewhat larger and earlier than that excellent variety. The heads are very uniform in size and shape and all mature at the same time. Lb. \$2.50, ½ lb. 75c., oz. 20c., pkt. 5c.

HARRIS' SHORT STEM CABBAGE.

The Best Large Late Cabbage Crown.-See Cut.

We have grown and improved this cabbage by careful selection for over 20 years, and think there is no cabbage equal to it for fall and winter use, either for home use or market. The heads grow uniformly, very large, deep and solid, and are of the very finest quality. They will keep better than any large cabbage we know of, being very much superior to the common varieties in this respect. The superior quality of this cabbage recommends it for home use and private customer trade.

We have this cabbage bred so well that 99 plants out of every 100 will produce good solid heads if given, good ground and proper care. Yields of 15 to 20 tons per acre are not at all uncommon with this variety, and even larger yields are produced under favorable conditions. Seed from large solid heads, lb. \$2.50, ½ lb. 70c., oz. 20c., pkt. 5c.

THE LUPTON CABBAGE.

Although a comparatively new variety, this cabbage has become very popular. It is a large, flat cabbage; heads very solid and uniform. It matures about the same time as All Seasons. In fact, it might be called an Improved All Seasons, as it resembles this popular variety in many respects, but is heavier and keeps its color better. Per lb. \$2.25, ½ lb. 60c., oz. 20c., pkt. 5c.

DANISH CABBAGE.

Since the Danish Cabbage has become so popular there has been much inferior seed sold. The demand was greater than the supply and the growers in Denmark and Holland sent a lot of poor mixed seed to the dealers in this

country. As far as we can find out they are still doing the same thing. As there is a popular belief that seed raised in this country is not as good as that raised in Denmark, seed of our own growing would not sell, so the only way to be sure the seed is pure and of the right kind is to buy the seed a year ahead and try it. This we have done. We can now furnish DANISH BALL HEAD CAB-BAGE SEED that we know to be pure. It may not grow quite as well as seed grown this year but it is good enough for anybody, and to be sure of having the right kind instead of guessing at it is worth a good deal.

We also offer seed imported from the same growers this year which we have no doubt is just as good as it always has been, but, of course, we do not know as we do in the case of the Tested Seed.

Danish Ball Head—This is the name under which the round, hard cabbage from Denmark became so popular in this country. The heads are nearly perfectly round and as hard as a stone.

They are not as large as our domestic cabbage but weigh nearly as much. For keeping through the winter there is nothing equal to this variety. They always bring the highest prices in market.

Tested Seed, grown in Denmark, lb. \$2.60, ½ lb. 70c., cz. 25c., pkt. 10c.

New Seed, imported this year, lb. $\$2.00, \frac{1}{4}$ lb. 60c., oz. 20c., pkt. 5c.

Solid Emperor Cabbage—About the same time that the Danish Ball head was introduced in this country we received from a grower in Denmark a sample of what he called "Solid Emperor" cabbage. This proved to be a very pure strain of the same cabbage as Ball Head. We have sold this strain ever since under this name. It has given excellent satisfaction. We offer seed from the original grower. Lb. \$2.25, ½ lb. 65c., oz. 20c., pkt. 5c.

STANDARD VARIETIES.

Succession Cabbage—This is a remarkably finely-bred cabbage. The heads are of good size and shape and have very few and small outside leaves. Nearly every plant will produce a good head. For a medium early cabage it is unequaled. It can be set out as late as the first of August, and matures before November 1st. Lb. \$2.50, ½ lb. 70c., oz. 20c., pkt. 5c.

All Seasons—Becoming very popular both for medium early and late crops. Heads large, solid and remarkably even in size and shape. Lb. \$2.00, ¼ lb. 60c., oz. 18c., pkt. 5c.

ETAMPES—A very early pointed-head cabbage of the finest quality for home use, being very tender and fine flavored. Lb. \$1.50, ½ lb. 45c., oz. 18c., pkt. 5c.

HENDERSON'S EARLY SUMMER—The old favorite Early Drumhead cabbage. We have a very fine strain that heads early and very evenly. Lb. \$2.00, ½ lb. 60c., oz. 18c., pkt. 5c.

Early York—Pointed heads, of very fine quality. Excellent for home use. Lb. \$1.40, ¼ lb. 40c., oz. 18c., pkt. 5c.

DANISH CABBAGE-SOLID EMPEROR.-From a Photograph.

Winningstadt—Good size, hard, pointed heads. Every plant will head. Lb. \$1.50, ½ lb. 45c., oz. 18c., pkt. 5c.

FOTTLER'S DRUMHEAD, or Improved Brunswick—One of the best for fall and winter use. Heads large and solid. Earlier than Flat Dutch. Lb. \$1.60, ½ lb. 45c., oz. 15c., pkt. 5c.

Premium Flat Dutch—An excellent large late cabbage. Lb. \$1.60, ½ lb. 45c., oz. 15c., pkt. 5c.

EXCELSIOR LARGE FLAT DUTCH—A very fine strain of Flat Dutch cabbage, Heads large and solid. Lb. \$1.75, ½ lb. 50c., oz. 18c., pkt. 5c.

Perfection Drumhead Savoy—The Savoys are much superior to other cabbage for the table, being nearly equal to cauliflower in delicacy of flavor. Our strain produces uniformly solid heads—more even and solid than any Savoy cabbage we have ever found, and we have tried all the so-called "solid-heading Savoys" catalogued by other seedsmen. Lb. \$2.00, ½ lb. 60c., oz. 20c., pkt. 5c.

mammoth Rock RED—A new large Drumhead red cabbage. Heads nearly as large as Flat Dutch, and very solid. Often brings much higher prices in market than other cabbage. Lb. \$2.25, ½ lb. 65c., oz. 20c., pkt. 5c.

Early Red Erfurt—An early red cabbage. Heads round and very hard. Fine for pickling. Lb. \$2.25, ½ lb. 65c., oz. 20c., pkt. 5c.

HE FAILED TO RAISE CABBAGE.

Mr. S. F. Weatherby, Peterburg, Ill., writes us: "I have failed to raise cabbage for two years because I did not get your Short Stem Cabbage, so I send this order in time."

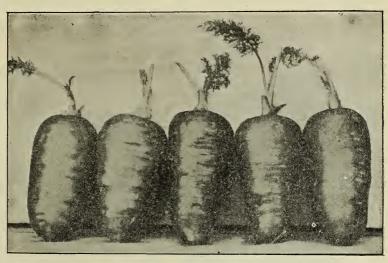

CARROTS.

One ounce of seed will sow 150 feet of row. It requires 4 to 6 lbs. to sow an acre, depending upon the distance between the rows.

HARRIS'

HALF-LONG CARROT.

We have made a specialty of this carrot for many years and think there is nothing better. The roots grow from 6 to 8 inches long, only slightly smaller at the bottom than at the top, and so smooth and even that a heap of them looks as though each carrot was turned out of a mold. In soft land they can be pulled out without digging. They keep well and are sweet and nutritious. Every one who has horses or cows should raise a patch of these carrots. They are the best thing to keep horses healthy in the winter, when there is no green food. They are also excellent for table use. Lb. 65c., 1/4 lb. 20c., oz. 10c., pkt. 5c.

HARRIS' HALF-LONG CARROT-From a Photograph.

NEW LIGHT YELLOW CARROT.

This is a distinct new variety of a light lemon color. Our cut gives a good idea of its shape. The roots grow a foot long about the same size the whole length. The quality of the roots is very fine. We know of no carrot that grows so large that is of such fine quality. This carrot will yield immense crops. It will be found excellent for table use, and its great productiveness will make it popular for stock feeding as well. Lb. \$1.00, ½ 1b. 30c., oz. 12c., pkt. 5c.

MASTODON CARROT.

A Large, White Carrot for Stock.

A very large white carrot which should supersede the old white Belgian, as it yields more, is more easily harvested and is of better quality. The roots grow very large. Being thick and not too long, they can be easily pulled. We think this variety will yield more good nutritious carrots per acre than any other variety. Lb. 55c., ½ lb. 18c., oz. 10c., pkt. 5c.

Early French Short Horn—The earliest best carrot for forcing. Lb. 80c., ¼ lb. 25c., oz. 10c., pkt. 5c.

Long Orange—We have a fine strain of this variety; roots long but not too tapering, smooth and straight. An immense yielder. Lb. 60c., ¼ lb. 20c., oz. 10c., pkt. 5c.

Large White Belgian—Very large; grows partly out of the ground; green tops. Will yield more than the yellow varieties. Lb. 45c., 1/4 lb. 15c., oz., 8c., pkt. 5c.

Collards, or Coleworts, are extensively grown in the southern states, where they furnish green food for the table or for stock all through the winter as well as other seasons. The seed is sown at different times, from the last of May until the first of August. Set out and cultivate like ordinary cabbage.

Georgia Collards-The best of seed. Lb. \$1.10, 1/4 lb. 35c., oz. 12c., pkt. 5c.

Corn Salad.

Used for "greens" like spinach. Can be sown in the spring and fall. Large Round-Leaved—The best variety. Lb. 60c., ½ lb. 20c., oz. 10c., pkt. 5c-

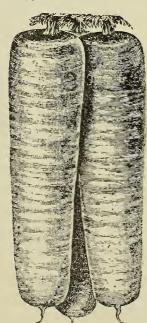

Chard, or Sea Kale Beet.

One ounce of seed will sow 50 feet of row.

Swiss chard is a beet grown for its leaves. The mid-rib when boiled makes delicious greens or the leaves may be boiled and served as spinach. No garden should be without it. Sow early in the spring on rich land.

Swiss Chard, or Sea Kale Beet—Lb, 50c., ½ lb, 1cc., oz. 8c., pkt, 5c.

5 this office, of 56a Kale Beet-10. 80c., 74 fb. 1cc., 02. 6c., pkt, 5c

NEW LIGHT YELLOW CARROT.

CELERY.

One ounce of seed will produce 3,000 plants.

Celery is easily raised. The trouble most unskilled gardeners experience is in raising the plants. We give full directions for culture with every order for seed. We sell plants in June and July at low prices. See Plant Department.

A Letter From a Large Celery Grower.

Enclosed find money for the celery seed (Golden Self-Blanching and Golden Heart). That is a Magnificent strain of celery. That word is hardly strong enough to express it, but it is the best I can do. I think I have the best celery in this locality. Rochester, N. Y., Oct. 13th, 1898.

Yours truly, R. K. SMITH.

GOLDEN SELF-BLANCHING CELERY

Our Gilt-Edge Strain of

GOLDEN SELF-BLANCHING CELERY.

We consider this the best "self-blanching" celery. It grows to a medium height with large solid stalks, which are crisp and of the finest flavor. Its distinguishing feature is the beautiful golden-yellow color of the stalks and leaves. Even without any banking up the leaves and stalks turn golden yellow, and if earthed up the outside stalks turn white, while the inside stalks and leaves are yellow, giving the whole stalk a most attractive appearance. It is certainly the best for fall and early winter use or for market. Will keep until the middle of winter. Our crop of seed is very small this year. We take great pains with this variety and have a very fine strain of it, being quite free from green and soft stalks. Lb. \$3.50, \frac{1}{4} lb. \$1.00, oz. 30c., pkt. 10c.

NEW "PINK PLUME" CELERY.

This new celery is apparently a cross between the White Plume and a red celery. The result is a self-blanching variety, with the fine nutty flavor of the red celery and the handsome appearance of the White Plume. The pink shades in the stalks give the celery a very pleasing appearance. Lb. \$2.25, ½ lb. 70c., oz. 20c., pkt. 10c.

GIANT PASCAL CELERY—This celery is remarkable for the thickness of the stalks, their crispness and fine flavor and long keeping qualities. It is a "giant" in the size of the stalks rather than in height. It is a remarkably strong grower, and will keep all winter when properly stored. We consider this one of the best varieties for winter use. Lb. \$1.75, ½ lb. 50c., oz, 18c., pkt. 5c.

Perfection Heartwell—Large and solid. A very popular market variety, by many considered the best large green sort. Lb. \$1.35, ½ lb. 40c., oz. 15c., pkt. 5c.

WHITE PLUME CELERY—Valued principally for early use. When very slightly earthed up the stalks and inside leaves turn perfectly clear white, giving it a very handsome appearance. The quality is not as good

nor does it keep as well as Golden Self-Blanching. Lb. \$2.00 1/4 lb. 60c., oz. 20c., pkt. 10c.

COLDEN HEART—The standard celery for winter use. Stalks large, compact, white on outside, with beautiful golden yellow heart. We have a very fine strain of this celery, and think there is nothing equal to it for winter use. A splendid keeper. Lb. \$1.35, ½ lb. 40c., oz. 15c., pkt. 5c.

NEW ROSE—A pink celery of the finest nutty flavor. Blanches perfectly white inside. Especially fine for home use when good celery is appreciated. Lb. \$1.75, 15 b. 50c., oz. 20c., pkt. 5c.

Dwarf Red—A little more red than New Rose, but very solid crest and fine flavored. Keeps all winter. Lb. \$1.75, 1/4 lb. 50c., oz. 20c., pkt. 5c.

Boston Market—Of branching habit; solid and fine flavor. Lb. \$1.35, 1/4 lb. 40c., oz. 15c., pkt. 5c.

CELERY PLANTS-See Plant Department.

CELERIAC, or TURNIP-ROOTED CELERY.

Cultivation the same as for celery, except that it is not necessary to earth it up or plant so far apart. Set the plants in rows 2 feet apart and 8 inches in the row.

Celeriac, Erfurt Large Early—The very best variety.

Lb. \$2.00, 1/4 lb. 60c., oz. 20c., pkt. 5c.

CUCUMBERS.

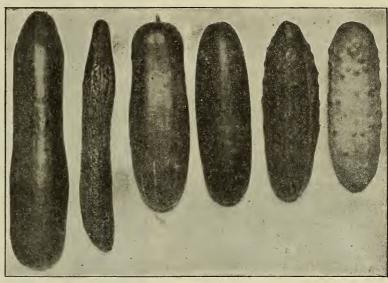

One ounce of seed will plant about 80 hills or sow 50 feet of row.

Seed is sown in this latitude in first part of May for slicing, and the latter part of July for pickles.

JAPANESE CLIMBING CUCUMBER.

When this cucumber was first brought to our notice we were rather skeptical as to its merits. A "climbing cucumber" seemed of doubtful value, but when we gave it a trial we found that it was a remarkably fine cucumber. Although the vines will climb if given an opportunity, they do perfectly well on the ground like other cucumbers. Their vigor of growth and healthy foliage are quite remarkable. The cucumbers grow long, straight, dark green, and are very solid and crisp. Season medium to late. Quite prolific.

Lb. 90c., ¼ 1b. 25c., oz. 10c., pkt. 5c.

Giant Para. Paris Pickling. Jap. Climbing. New Emerald. Cool and Crisp. White Spine.

Photograph showing comparative sizes of above varieties.

NEW EMERALD CUCUMBER.

This new cucumber impressed us most favorably in our tests. The cucumbers grow perfectly smooth and round and are of a very dark green. They retain their color until ripe; they never turn yellow. It is certainly a very fine cucumber either for home use or market. The handsome appearance of the fruit and its perfect shape make it a profitable market variety, and its superior quality will be appreciated by all who grow it. Lb. 80c., ½ 1b. 25c., oz. 10c. pkt. 5c.

PARIS PICKLING CUCUMBER.

This is called a "pickling" cucumber, and is undoubtedly valuable for this purpose, being long, slender and crisp and dark green, but in our opinion there is no cucumber equal to it for slicing for table use. When the cucumbers are 8 to 10 inches long they are not over 1 or 1½ inches in diameter, and so solid, crisp and fine flavored that they can be picked off the vines and eaten without dressing of any kind. This, we think, could hardly be said of any other variety. For pickles it is unsurpassed. When 3 or 4 inches long it is hardly thicker than a lead pencil, and perfectly solid and crisp. Lb. \$1.25, ½ lb. 35c., oz. 18c., pkt. 5c.

GIANT PARA CUCUMBER—(See Cut.)

This cucumber grows 15 inches long, is straight, smooth, dark green, and of first-class quality for slicing. It is a magnificent cucumber for home use and market, being the longest smooth green cucumber for open ground culture we know of. It is medium early and quite prolific. Lb. 85c., ½ lb. 25c., oz. 10c., pkt. 5c,

NEW SIBERIAN CUCUMBER. THE EARLIEST.

Of all the varieties in our test garden the past season, the Siberian produced the first cucumbers of edible size.

The cucumbers are rather short, thick, straight and smooth, and of fair quality. This is the best *early* cucumber we have ever seen. Lb. 65c., ½ lb. 20c., oz. 10c., pkt. 5c.

COOL AND CRISP CUCUMBER.

This new variety remains green longer than any other cucumber; in fact, they do not get ripe at all before frost. The cucumbers are long, straight, dark green and very solid and crisp. The fruit has a peculiar icy appearance, which probably suggested the name. Excellent for pickles as well as for table use. Lb. 75c., ½ lb. 25c., oz. 10c., pkt. 5c.

STANDARD VARIETIES.

We offer choice strains of seed of the following well-known varieties at the uniform price of 50c. per lb., 1-4 lb. 18c., oz. 10c., pkt. 5c.

NEW EVERBEARING CUCUMBER—The peculiar ment of this variety lies in the fact that it will start to bear small cucumbers $very\ early\ and\ keep\ on\ producing$ them, whether the others are picked or not. This makes it a valuable variety for pickling.

Nichols Medium Green—A handsome straight cucumber of medium length, good color and first-rate quality.

Improved Long Green — Excellent for pickling or slicing. Makes pickles of the finest quality.

Tailby's Hybrid—A cross between White Spine and a long English forcing cucumber.

Early Green Cluster-Fine for pickles.

Early Russian-Very early, short, solid and crisp.

Early Frame-Best for forcing.

Green Prolific-Very productive. Excellent for pickles.

Early White Spine - Very popular for market, pickles and home use. Early and prolific

SWEET CORN.

One quart will plant 400 to 500 hills; 8 to 10 quarts per acre.

NEW MAMMOTH WHITE CORY.

The Cory Corn when first introduced was a small eared, red corn but earlier than any other variety at that time. Later the White Cory was produced which was a marked improvement. Now we have the New Mammoth White Cory, is much larger and of better quality. It is as early as "First of All,", (a red corn) and with ears much larger; corn and cob pure white. Ears 7 to 8 inches long, stalk short but very prolific. See photograph of stalk with three ears—two large and one smaller. There were many like this in our field the past very dry season. Quart postpaid, 40c., pint 22c., ½ pt. 12c., pkt. 5c. By express or freight, pint 16c., quart 30c., 4 qts. 70c., peck \$1.00, bushel \$3.50.

KENDEL'S EARLY GIANT.

This variety introduced a few years ago has proved to be of great merit. In season it follows closely after Mammoth White Cory. The ears are large and well filled out with pure white kernels. This variety produced the *largest ears* of any early corn in our test last season. It will be found a valuable variety for market and home use. The stalks are prolific and the corn of fine quality. Postpaid, qt. 35c., pt. 20c., ½ pt. 12c., pkt. 5c. By express or freight, qt. 25c., pt. 15c., 4 qts. 60c., pk. 90c., bu. \$3.00.

FORD'S EARLY SWEET CORN.

With the exception of Cory, this is the earliest sweet corn. Athough a few days later than Cory, its superior quality makes it much more desirable as an extra early variety for home use. This variety has been produced by selection for many years and is a "thoroughbred." The ears are six to eight inches long, kernels very large and deep for an early corn; grows about five feet high and

has usually two ears on a stalk. It is far superior to any other extra early corn in quality. Qt., postpaid, 30c., pt. 18c., ½ pt. 10c., pkt. 5c.

SHAKER'S EARLY SWEET CORN.

We have raised this corn for years and have never found any variety equal to it. It is a second early variety, coming on right after the extra early kinds. The ears are large and the corn deliciously sweet, succulent and tender. There is no better variety for home use or for market. We sell large quantities to canning establishments, who find it a very superior variety for their purpose. Qt. 30c., pt. 18c., ½ pt. 10c., pkt. 5c.

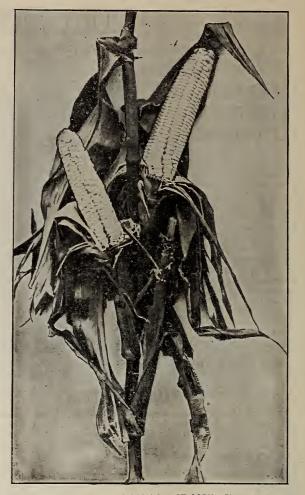

STANDARD VARIETIES. PRICES - Prepaid by mail, quart 30c., pint 18c., half pint 10c., packet 5c.

country centleman—A late variety of remarkably fine quality. The kernels are arranged irregularly on the cob and are very deep, the cob being very small. Its great merit lies in the delicious sweetness, tenderness and fine flavor of the corn, which is unsurpassed by any other variety. The corn matures rather late and remains green a long time and is very prolific, 3 or 4 ears often being produced on one stalk,

CORY-The standard extra early corn.

Perry's Hybrid—A little later than Cory, but larger and of better quality. Sweet and tender. Red cob.

Crosby's Early-Good size and fine quality.

NEW MAMMOTH WHITE CORY SWEET CORN -Photograph.

HICKOX IMPROVED—A little earlier than Stowell's Evergreen, very large 12-rowed ears; kernels large and deep and of the very best quality. We consider this the best late variety for home use or for market.

cold colN—The *latest* variety. Will remain sweet and tender longer than Evergreen. The kernels even when young are golden yellow, very deep, and 14 to 18 rows to the cob. This variety prolongs the sweet corn season at least a week after others are gone.

Stoweli's Evergreen—The standard late corn. We have some fine pure seed.

BLACK MEXICAN—A delicious corn. It is strange that more of this corn is not used. It is without exception the sweetest and most delicious corn grown. For home use, where a tender, fine flavored corn is appreciated, we recommend the Black Mexican. Its color is its only drawback, but after anyone has eaten it a few times the color will cease to be an objection.

PARCHING, or POP CORN.

Cultivate the same as other corn. In growing it on a large scale we plant in hills 3 feet apart and 4 plants in a hill. It is a profitable crop.

White Rice Pop Corn—This is the very best variety. The ears are 6 to 7 inches long and 4 inches in circumference. Yields well, is sure to pop and produces a large and beautifully white mass of the richest and highest flavored pop corn. Qt. 40c., pt. 22c., ½ pt. 12c., pkt. 5c.

For Prices of Sweet Corn in Bulk, see page 30.

EGG PLANT.

One ounce of seed will produce about 2,000 plants.

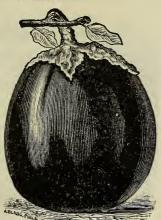

This is a delicious vegetable, and should be in every garden. It is also a profitable market crop. It is cultivated like tomatoes.

NEW YORK IMPROVED EGG PLANT. New Thornless Strain.

This is a superb strain of this wellknown and popular variety. It is not only thornless, which is quite an advantage, but it possesses all the other requirements, such as earliness, prolificness, and large size and handsome shape of fruit, which go to make up a perfect egg plant. Lb. \$3.10, ½ 1b. 85c., oz. 30c., pkt. 10c

BLACK PEKIN-

One of the best varieties for home use. The plant is a vigorous grower

NEW YORK IMPROVED EGG PLANT.

a vigorous grower and productive. Fruit very large, perfectly round; color very dark purple, almost black. A little earlier than New York Improved Purple, and fully equal to it in quality and flavor. Lb. \$2.85, ½1b. 80c., oz. 30c., pkt. 10c. Extra Early Dwarf Purple—A valuable variety. Not large, but very early and prolific. Lb. \$1.75, ½1b. 75c., oz. 18c., pkt. 10c.

ENDIVE

ENDIVE-GREEN CURLED.

Endive is used for salad, especially in autumn and winter. It is easily grown.

Green Curled—Hardy, with handsomely curled leaves. Valuable for salad and garnishing. Lb. \$1.50, ½ lb. 45c., oz. 20c., pkt. 5c.

Moss Curled—A beautiful variety, with very finely curled leaves. Blanches perfectly white in the center. Lb. \$1.50, ½ lb., 45c., oz. 20c., pkt. 5c.

HORSE RADISH.

Horse Radish is easily grown from sets—small lengths of roots. These sets, if planted in the spring in good rich soil, will form large roots by fall. The sets should be planted with the small end down, and the upper portion two inches below the surface.

SETS—Postpaid by mail, 25c. per doz., 85c. per 100; by express, 50c. per 100, \$3.50 per 1,000.

KOHL RABI.

One ounce of seed will sow about 300 feet of row.

Kohl Rabi is a remarkable vegetable. To many it will be quite a curiosity. It looks as though it was half cabbage and half turnip. The leaves can be fed to cows like cabbage, while the bulbs resemble the Swede Turnip, and are relished by horses and other animals. It is also grown as a garden vegetable for the table and the market.

Large Green—This variety is usually grown for stock. It is also good for the table. Lb. \$1.00, ½ lb. 30c., oz. 12c., pkt. 5c.

Early White Vienna—The best variety for the table; also excellent for stock. Quality excellent. Cook as you do turnips. It is drier than the turnip and of more delicate flavor. Lb. \$1.35, ½ lb. 40c., oz. 15c., pkt. 5c.

KALE, or Borecole.

One ounce of seed will produce 2,000 plants.

KALE-DWARF CURLED GREEN.

Next to Brussels Sprouts the Kale, though extremely hardy, is the most delicate of the cabbage family. It is grown precisely as cabbage. It is the tender shoots that are so delicate and delicious. They are better after a few frosts in the fall. With a little protection, or when the snow is deep, they will stand the winter and afford a constant supply of "greens" all through the winter and early spring.

Dwarf Curied Green—The best dwarf variety. Lb. 75c., ½ lb. 20c., oz. 10c., pkt. 5c.

Tail Green Scotch Curled—Lb. 60c., 1/4 lb. 15c., oz. 8c., pkt. 5c.

LEEK.

One ounce of seed will sow 150 feet of row.

Leek is a kind of onion which does not form any bulb but grows in a long stem which is blanched by drawing earth around it. When blanched in this way it makes an appetizing salad, or is eaten like green onions, which are so much liked in the spring. Seed is sown in the spring and the Leek is ready to use in the fall or early in winter. It should be raised on moist land or planted in shallow trenches and watered in dry weather.

Musselburgh—The largest of all varieties. Lb. \$1.50, ½ lb. 40c., oz. 15c., pkt. 5c.

Large American Flag—The most popular variety; grows to a good size, and is straight and uniform and of the best quality. Lb. \$1.10, ½ lb. 35c., oz. 15c., pkt. 5c.

You can get your____

SEEDS FREE!

By getting your neighbors to send for their seeds with you. See what we offer on page 3 to those who get up "Club Orders."

One ounce of seed LETTUCE, will sow 250 feet of row.

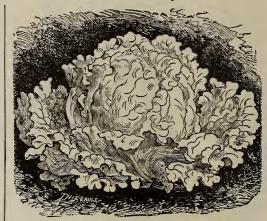

ABOUT VARIETIES—There are two distinct classes of Lettuce. One class forms heads like cabbage while the other merely produces loose leaves. The heading varieties are the most popular and are the varieties most profitable for market. For forcing in the hothouse or hothed Boston Market is the best variety. Although Big Boston makes a larger head, it does not mature so fast and is therefor better for transplanting to the open ground. Crand Rapids does not form heads but the leaves are of excellent quality. Deacon, Iceberg and Wonderful form large solid heads and are of the finest quality if transplanted or thinned out to a foot apart. They are best grown by sowing the seed in a hothed and transplanting to the open ground early in the spring, but they will do well if sown early in the open ground. Black Seeded Simpson forms a large bunch of leaves and can be used early.

DEACON LETTUCE.

We are the original introducers of this magnificent lettuce, which has gained for itself great popularity. It has been re-named by some California grower "San Francisco Market," but "Deacon" is the original and proper name which we called it 20 years ago. It is the finest large-head lettuce in existence. The leaves are smooth, thick and tender, and inside the head are nearly perfectly white, and of the finest quality. It is important that it should have plenty of room to grow. Thin out the plants to 10 or 12 inches apart in the rows, and you will have magnificent heads. Lb. \$1.25, ½ lb. 40c., oz. 16c., pkt. 5c.

NEW ICEBERG LETTUCE.

This new lettuce forms large heads very early in the season and continues crisp and tender for a long time. The leaves are light green, nearly white in the center of the head, thick, crisp, and without bitterness. We highly recommend this lettuce for early summer use. Lb. \$1.25, ½ lb. 40c., oz. 16c., pkt. 5c.

NEW ICEBERG LETTUCE.

WONDERFUL LETTUCE.

This new Lettuce is rightly named. It is certainly a wonderful variety. The heads grow nearly as large and solid as Jersey Wakefield cabbage. The heads form very early, but notwithstanding this they were the last to go to seed in our test of 15 varieties all sown the same day. The leaves are green, turning to white in the center of the head. The quality is excellent. Everyone should try this lettuce. It is the most remarkable variety we have seen in many years. Oz. 25c., pkt. 10c. Note.—This lettuce must be thinned out or transplanted to 1 foot apart.

- CRAND RAPIDS LETTUCE— This new variety is distinct from other varieties in being of upright growth and with very large mid-rib to the leaves, which are white and nearly as crisp as celery. The leaves are large, of an attractive light green and beautifully curled. It will stand a long time without going to seed, and keeps fresh and green for a long time after cutting. Lb. \$1.00, ½ 1b. 30c., oz. 15c., pkt. 5c.
- DENVER MARKET LETTUCE—This is an excellent variety, either for forcing or out-door culture. The leaves are curled and wrinkled like a Savoy cabbage, which gives it a very attractive appearance. The quality is very fine, being crisp, tender, and without bitterness. The color is light green, nearly white inside the head. Lb. 90c., ½ lb. 30c., oz. 12c., pkt 5c.
- Early Creen Tennis Ball—Black Seeded. Similar to above, but darker green. Lb. 90c., 1/4 lb. 30c., oz. 12c., pkt. 5c.
- BLACK SEEDED SIMPSON—Similar to Early Curled Simpson, but nearly *twice the size*. A very handsome lettuce, popular in market. Lb. 90c., ¼ lb. 30c., oz. 12c., pkt. 5c.
- BOSTON MARKET, or White Seeded Tennis Ball—The earliest head lettuce for forcing. Round, compact heads of attractive light green, and of finest quality. Lb. \$1.00, ½ lb. 30c., oz. 12c., pkt. 5c.
- Big Boston—A very popular variety for forcing. The heads are larger than Boston Market, but not quite so early. Lb. \$1.25, ½ lb. 40c., oz. 15c., pkt. 5c.
- Early Curied Simpson—Large, very handsomely curied leaves. Lb. 90c., ½ lb. 30c., oz. 12c., pkt. 5c.
- Cos Lettuce, Paris White—The best Cos Lettuce. The outside leaves should be tied together to blanch the inner ones. Lb. \$1.20, ½ lb. 40c., oz. 15c., pkt. 5c.

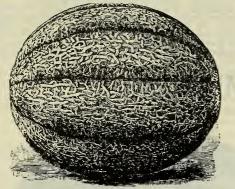

MUSK MELONS.

One ounce of seed will plant about 60 hills; 3 lbs. per acre.

It is much easier to raise melons than is usually supposed, and they are so delicious a fruit that it seems strange to us that everyone who has any garden at all does not raise them. All that is required is a good rich or well-manured soil that is not too heavy, and a warm, sunny situation.

GOLDEN EAGLE.

A new melon of exquisite flavor. The fruit is oval in shape and of medium size and peculiar coloring, the rind being golden yellow overspread with light green netting, giving the fruit a very attractive appearance. The flesh

GOLDEN EAGLE.

is salmon color, thick and exceedingly sweet and fine flavored. The fruit ripens medium early and the vines are very vigorous and productive. Should be raised by everyone who appreciates melons of fine quality. ½ lb. 70c., oz. 20c., pkt. 5c.

GRAND RAPIDS.

This melon is valuable on account of earliness and large size. The flavor is not quite as strong and sweet as Miller's Cream or Emerald Gem, but it is very good. Its earliness, large size and handsome appearance will, we are sure, make it a very profitable market variety, and it will also be very acceptable to those who have had trouble in getting the later varieties to ripen before frost. The melons are oblong, netted and of a light green, turn-

ing to nearly yellow when ripe. The flesh is pink or light salmon color, thick, sweet and good flavored. Everybody should plant at least a few hills of Grand Rapids. Lb. 80c, ½ lb. 25c., oz. 10c., pkt. 5c.

KINSMAN QUEEN MUSK MELON.

This is a new musk melon of great merit. It is claimed to be a cross between Emerald Gem and another variety of large size. The melons resemble the well-known and popular Surprise Melon, but are larger, of better shape, and more deeply ribbed than this variety. The Kinsman Queen combines the beautiful salmon-colored flesh and delicious sweetness of the Emerald Gem with larger size, extreme earliness and handsome appearance. The shape of the melon is shown in our cut (made from a photograph). The melons are very light yellowishgreen, ribbed and slightly netted; flesh thick, sweet, and of the finest flavor. Vines vigorous and very productive. The yield on a small patch of these melons is remarkable, and they run so even in size and shape that they can practically all be used or marketed. They would prove a profitable crop. Everyone should have some of these melons. Lb. \$1.20, ½ lb. \$5c., oz. 15c., pkt. 5c.

MILLER'S CREAM, or "OSAGE." A Most Delicious Melon.

We know of no musk melon that is so uniformly good as this. With most varieties some melons are very good while others are poor, but the Miller's Cream Melons are always very sweet and high flavored. This magnificent melon has few equals for quality and productiveness. The melons are oval, dark green and slightly ribbed. The flesh is a beautiful orange or salmon color, and so thick, sweet and high flavored, it will be a revelation to those who know only the ordinary musk melons. Lb. 60c., ¼ lb. 20c., oz. 10c., pkt. 5c.

STANDARD VARIETIES.

Price of the following varieties: Lb. 60c., I-4 lb. 20c., oz. 10c., pkt. 5c.

CHAMPION MARKET—A handsome, closely netted melon, oblong and slightly ribbed; green flesh of excellent quality. Excellentfor shipping.

MELROSE—We have found the Melrose to be an excep. tionally fine flavored melon. The melons are oblong, of medium size, dark green and thickly netted. The flesh is green, thick, and of the richest flavor. Rather late in ripening.

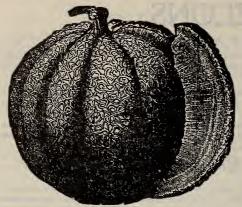

NEW COSMOPOLITAN—The melons are round and very thickly netted, but not ribbed. The flesh is greenthick and sugary, and of fine flavor.

Emerald Gem—A most delicious melon. Flesh saimon color, thick, deliciously sweet and high flavored. Fruit round, dark green, slightly ribbed and of medium size, Very productive.

For other varieties see next page.

KINSMAN QUEEN. - From a Photograph.

HACKENSACK MUSK MELON.

NEW EARLY HACKENSACK—An early strain of the well-known Hackensack. One of the best green-fleshed melons for home use or market.

Hackensack—The most popular market melon; round, ribbed and thickly netted, handsome and of fine flavor. Our strain of this variety is very fine.

MONTREAL MARKET—When well grown this is one of the largest, handsomest and best flavored meions. It is rather late, and requires good culture, but will repay for the extra trouble by producing magnificent fruit of the largest size, thickly netted and deep ribbed. Flesh green, very thick and high flavored.

NETTED CEM (Called also "Rocky Ford")—One of the earliest melons. Fruit medium size, oval, and thickly netted; green flesh, very sweet and high flavored. Vines very prolific. A very satisfactory variety for inexperienced growers.

White Japanese—A remarkably high flavored melon. So strong is the flavor, in fact, that it is objected to by some on this account, but by others considered delicious. Fruit round, cream-colored, with orange-colored flesh. Our stock of this variety is exceptionally fine.

Fine Green Nutmeg-An old favorite. Round, thickly netted fruit.

WATER MELONS.

One ounce of seed will plant about 25 hills; 3 lbs. per acre.

FORDHOOK EARLY.

Many people in the North have wished to raise water melons, but have been prevented from doing so on account of the difficulty in getting them to ripen before frost destroyed the vines. To these the Fordhook Early will be a boon. It is at least two weeks earlier than any other good, large variety, while the quality is of the very best. The fruit is oval in shape and grows to a large size. The flesh is a bright red, sweet and fine flavored. Lb. \$1.00, \(\frac{1}{2} \) 150., oz. 150., pkt. 5c.

HUNGARIAN HONEY.

One of the sweetest and finest flavored of all water melons, and also early and productive. The melons are perfectly round, dark green, and of medium size. Flesh bright red, solid, and very sweet. We highly recommend this melon for home use, Lb 90c., 1/4 lb. 25c., oz. 10c, pkt. 5c.

STANDARD VARIETIES.

Price of the following standard varieties of water melons, postpaid, lb. 55c., 1/4 lb. 18c., oz. 10c., pkt. 5c.

VOLCA—A very sweet, solid-fleshed melon. Ripens early and is productive. Fruit as round as a ball and very light green, almost white; flesh bright red, firm, solid, sweet and fine flavored.

Cuban Queen—One of the largest and finest melons. Much resembles Kolb's Gem.

MAMMOTH IRONCLAD — Very large, handsome, oblong melons; dark green, beautifully striped with lighter green. Flesh firm, solid and sweet, and surrounded with a very hard and tough though thin rind, which makes it valuable for shipping.

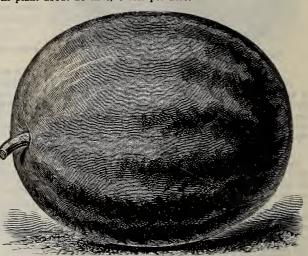

Kolb's Gem—This is the large, handsome melon commonly seen in our markets. Fruit nearly round, handsomely marked with light and dark green stripes, and is of excellent quality.

Early Mountain Sweet—Large, early and productive, lce Cream—White-seeded, early, and delicious flavor. Fruit round and very light green.

CITRON MELON, for Preserves.

Everybody should plant a few citrons for preserves. Cultivation similar to water melons.

Creen Citron, for Preserves—Round, striped and handsomely marbled, Very hardy and productive.. Red seed. Lb. 85c., ½ lb. 25c., oz. 10c., pkt. 5c.

FORDHOOK EARLY.

MUSHROOM SPAWN.

English Spawn—In bricks of one pound each. In much better shape for mailing than the French spawn. Lb., by mail, 30c.; by express, 20c. per lb.

MUSTARD, for Salad.

White London-Leaves light green, mild and tender. Lb. 40c., ½ lb. 15c, oz 8c., 3 pkts. 10c., pkt. 5c.

OKRA, or GUMBO.

One ounce of seed will sow 25 feet of row. Should be sown in open ground when danger of frost is past.

Used for thickening and flavoring soup. The pods contain a large amount of gum, which imparts a thickness and softness, as well as a fine flavor to the soup. Directions for use can be found in any good cook book.

Dwarf White, or Density-Lb. 60c., 1/4 lb. 20c., oz. 10c., pkt. 5c.

WHITE VELVET—A distinct and valuable variety. The pods are large, round and smooth, and not ridged like the old varieties. Lb. 63c., ½ lb. 20c., oz. 10c., pkt. 5c.

ONIONS.

One ounce of seed will sow 150 feet of row. It requires about 6 pounds of seed per acre.

MORETON FARM SUPERIOR ONION SEED.

We take great pains with our onion seed and think we have some of the finest strains in the country.

Cheap Onion Seed.—We cannot sell our onion seed, raised from only the best-shaped and soundest onions, at as low a price as we could the ordinary California grown seed that is sold by most seedsmen -such seed never produces as even a crop of onions as our seed, nor will the onions mature as early or keep as well. Hard, well-matured onions of even shape will always sell for considerably more than ordinary stock. Such onions can only be raised from seed raised with the greatest care. There is nothing so foolish as to try to save money on onion seed. The best seed cannot, from the nature of the case, be sold at the lowest prices. The highest-priced seed may not be the best, but the lowest-priced cannot be

Mr. M. L. Blackman, Howell, Mich., writes: "The onion seed I got of you last spring (your own growing) was the best I ever sowed, WITHOUT ANY EXCEPTION. The onion sets just as good and largest measure, too."

A Letter from a Large Onion Grower.

Jos. Harris Co.

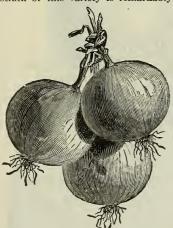

GENEVA, Ohio, Jan. 21, 1899.

DEAR SIRS—Save me 15 lbs. of your onion seed (Yellow Globe Danvers). My onions that I raised from your seed are the best in this part, and if they do as well the coming year no other man can sell much seed in this part. My neighbors want some of it. I will get it for them to help your trade, as you sold me the best seed that was ever planted here, and I am thankful for it. D. F. RANKIN.

YELLOW GLOBE DANVERS ONION.

Extra Selected Strain.

This is the most popular onion for market or home use. Very handsome in shape and color. Matures early, keeps well, and is firm and of mild, pleasant flavor. Our strain of this variety is remarkably fine, of the true

YELLOW GLOBE DANVERS ONION.

globe shape, and so well bred that it is hard to find a scullion or poor onion in ten thousand. It has yielded as high as 900 bushels per acre, and 500 to 600 bushels is not an unusual crop. Don't buy cheap seed of this variety. To get the highest prices for onions they must be of perfect shape and of uniform color. This can only be obtained from the most carefully grown seed, which

cannot be sold at very low prices. What is saved in the cost of the seed is lost ten times over in the crop. New seed, crop of 1899, prepaid by mail, lb. \$1.45, 1/4 lb. 40c., oz. 15c., pkt 5c.

YELLOW CLOBE DANVERS (Best California Grown Seed)—To those who do not wish to pay a little extra for our finest strain of Yellow Globe Danvers Onion we offer this seed, which is equal to any seed offered except the above named. It is the same that is sold by all the most prominent seedsmen of the country. Lb., postpaid, 90c., '4 lb. 25c., oz. 12c., pkt. 5c.

Round Yellow Danvers — The same as Yellow Globe Danvers, except that the onions are a little flatter. It is one of the best varieties to sow for sets, as well as for large onions. Lb. \$1.00. 1/4 lb. 30c., oz. 12c., pkt. 5c.

EARLY WHITE PEARL ONION.

This is the earliest large white onion. It grows with remarkable rapidity, attaining a very large size and ripening as early as the smaller growing varieties. The shape is flat, like the Red Wethersfield. The color is a beautiful pearly white. Flavor very mild and quality excellent. Its large size, handsome appearance and fine quality make it a very profitable onion to raise for fall market and a most excellent variety for home use. This onion does not keep as well as the Danvers or other yellow and red onions, so should not be kept too late in the winter. Per lb., postpaid, \$2.00, 1/4 lb. 60c., oz. 20c. pkt. 5c.

NEW EARLY BARLETTA ONION.

EARLY BARLETTA ONION.

This remarkable little onion is a wonder for rapidity of growth and early maturity and evenness in size and shape. They are the handsomest and most perfect white pickling onion we have ever seen. When sown thick they will grow to about the size of a cherry, perfectly round, pearly white, and of very mild flavor. They are a profitable crop to grow for market. The seed can be sown as late as July 1st and mature a crop before fall. Lb. \$2.00, 1/4 lb. 60c., oz. 20c., pkt. 5c.

Other varieties on next page.

"PRIZE TAKER" ONION.

The largest and handsomest yellow onion grown. This is the large yellow Spanish onion so common in our markets, and so highly prized for its mild and agreeable flavor. To raise these immense, handsome onions to perfection, the seed should be started in a hotbed or box in the house, and the onions transplanted to the open ground as soon as it can be gotten in good condition. We offer a fine strain of American grown seed, which is much superior to imported seed for this country. Lb. \$1.90, 1/4 lb. 55c., oz. 18c, pkt. 5c.

Early Southport Red Clobe-We regret that our crop of this variety was a failure this season and we therefore have no seed of our own growing to offer.

Red Wethersfield-The standard red onion. Large and flat; a heavy yielder. Lb. \$1.20, 1/4 lb. 30c., oz. 12c., pkt. 5c.

Early Large Red-A very early flat onion. The best red onion where seasons are short. Lb. \$1.20, 1/4 lb. 30c., oz. 12c., pkt. 5c.

HARRIS' RED GLOBE-This is a fine strain of what is usually called "Southport" Red Globe. It is a very large, handsome, red onion, of perfect globe shape and very solid. Requires early sowing and rich land; given these it will produce the largest and finest red onions grown. Will keep until late in the spring. Lb. \$2.25, 1/4 lb. 60c., oz. 20c., pkt. 5c.

Southport White Clobe - A magnificent large white onion, perfect globe-shaped and very solid. It requires a long season and rich land, but when given these will yield a large crop of the handsomest onions grown, which brings the highest prices in market. We have seed of a very fine strain of this variety. It is worth twice as much as western grown seed. Lb. \$2.85, 1/4 lb. 80c., oz. 25c., pkt. 10c.

White Portugal, or Silver Skin-An early, flat, white onion, with mild and pleasant flavor. White onion sets are nearly all of this variety. Lb. \$1.75, 1/4 lb. 50c.,

oz. 20c, pkt. 5c.

CIANT ROCCA — An Italian onion of very large size and delicate flavor, of light brown color and globe shape. Succeeds best south of Philadelphia, where it will produce immense crops. Lb. \$1.50, 1/4 lb. 40c., oz. 15c., pkt. 5c.

NOINC SETS.

One quart will set 75 to 100 feet of row, depending upon the size of the sets.

Onion sets are used to produce onions earlier than they can be procured from seed. By using sets, large, ripe onions can be had in July, and green "bunching' onions early in the spring.

Our Onion Sets are of our own raising from the best strains of seed, and are small, sound and We have repeatedly tried our own sets by the side of the best "Philadelphia grown" sets. and find that ours give a smaller percentage of onions that run to seed. We consider them as good as the best sets grown anywhere, and much superior to many of the so-called "Philadelphia grown" sets.

Our Prices are subject to change without otice. They will probably rule about as quoted notice. They will probably rule about as quoted below. Please write us for prices on what quantity you need You cannot get as good sets cheaper anywhere. Our sets are unusually fine this year.

Yellow Sets-Prepaid by mail, qt. 35c., pt. 20c. By express, not prepaid, quart 20c., peck 85c., bushel \$3.00.

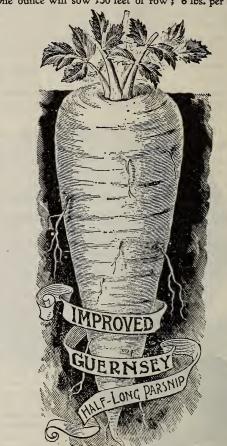

White Sets -(Silverskin)-Prepaid by mail, qt. 40c., pt. 22c. By express, not prepaid, qt. 25c., peck 95c., bushel \$3.25.

Potato Onion Sets-Will produce large, handsome, yellow, ripe onions in July or first of August. They never go to seed. The sets are larger than those grown from seed. Prepaid by mail, qt., 45c., pt. 25c.

Egyptian, or Perennial Tree Onion-This is a distinct kind of onion, that when once started will come up every year as soon as the frost is out of the surface soil, and will produce green bunching onions earlier than any other variety, and requires very little care. If the sets are set out in the spring they will divide and produce five or six new green onions the next spring from each set. Sets by mail, qt. 50c., pt. 18c. By express, qt. 20c., peck 85c.

PARSNIPS.

One ounce will sow 150 feet of row; 6 lbs. per acre.

IMPROVED GUERNSEY HALF-LONG - This fine strain of parsnip is a great improvement on the old long varieties. Our cut gives a good idea of its shape. The roots are very smooth and even in shape, easily dug, and are fine-grained, sweet and tender. We take great pride in our improved strain of this variety, and highly recommend it for both market and home use. Our seed is extra fine this year, crop of '99. We offer it at the following low price. Lb. 45c, 1/4 lb. 15c., oz. 8c., pkt. 5c. By express, lb. 35c., 5 lbs. or more, 28c. per lb. Long Hollow Crown-Long, smooth and straight, and of fine quality. Lb. 45c., 1/4 lb. 15c., oz. 8c., pkt. 5c.

PARSLEY.

One ounce of seed will sow 150 feet of row. Champion Moss Curled—The handsomest and finest curled and fringed variety. Lb. 70c., 1/4 lb. 20c., oz. 10c., pkt. 5c.

Extra Double Curled—A beautiful finely curled parsley Very dark green. Lb. 65c., ½ lb. 20c., oz. 10c., pkt. 5c.

PEAS.

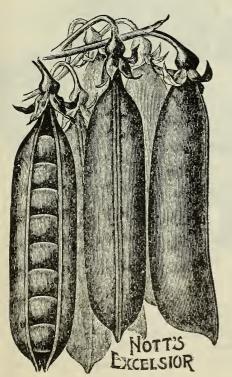

One quart will sow 100 feet of row. Two bushels per acre.

Our Seed Peas are all grown in the northern part of this State, and are of the EARLIEST and HARDIEST as well as the PUREST Strains. They are FAR SUPERIOR to most of the Seed Peas sold. They will produce an EVEN CROP of well-filled pods, which cheap and carelessly grown seed will not do.

A FEW WORDS ABOUT VARIETIES.

The small early peas, such as Alaska and First and Best, are valuable principally because of their earliness and hardiness. They can be sown while some frost is still in the ground, while if the larger and sweeter peas were sown at the same time they would rot in the ground. Everyone should sow a quart or two of Alaska very early. But do not depend on these for your main supply of peas as they are soon gone. The earliest large-podded wrinkled pea is Gradus (called also Prosperity); the pods are very large and the peas of fine quality, but the vines are not very prolific. The next earliest is Nott's Excelsior, which is a dwarf pea with large pods and very prolific. This variety can be sown soon after the Alaska and will follow it closely. Following these if sown at the same time come Horsford's Market Garden and Heroine. The former is very prolific and the latter a little late with large pods and peas of very fine quality. Of the large-podded later kinds Duke of Albany is the earliest, followed closely by Telephone and Juno. All of these are excellent market sorts as well as delicious peas for home use.

Sow some of the early, medium and late kinds and you will have delicious peas for a long time.

GRADUS or "PROSPERITY" PEA.

This is the first extra early pea with pods as large as the late kinds. Although this pea is not as early as Alaska or First and Best, as some claim, yet it is earlier than any other large-podded pea with sweet, wrinkled seed. It is not as prolific as Nott's Excelsior. See prices, page 23.

DUKE OF ALBANY, or AMERICAN CHAMPION.

Ouke of Albany Pea.
(Natural Size.)

This is a grand med'um late or main crop pea. Vines grow about 3 feet high and produce an abundance of large, well filled pods. The peas are of fine quality. This is one of the best varieties for home use and market. It is a little earlier than most of the large-podded varieties. See prices, page 23.

NOTT'S EXCELSIOR. THE BEST EARLY DWARF PEA.

This is the *earliest* dwarf wrinkled pea. The plant is dwarf and needs no support. The pods are of good size and well filled with large peas of the finest quality. It is as early as the American Wonder, while the vines are much more productive and the pods of larger size. There is no better early pea. See prices, page 23.

ALASKA PEA.

There are a dozen strains of early peas offered by as many different seedsmen with their names attached, but we have failed to find one any earlier, more even in size of pod and date of maturity, or of greater productiveness than our strain of Alaska. Most of the early varieties ofered are inferior to the Alaska and none superior. It differs from most early peas in having green seed. The peas mature so evenly that they can be picked in one picking. It is a profita-

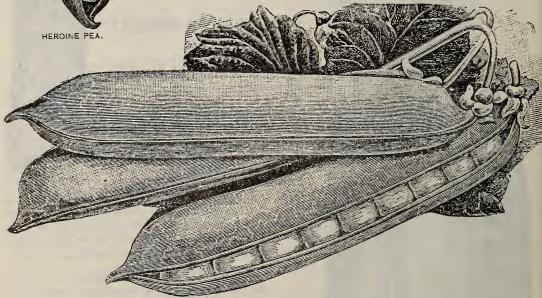

ALASKA PEA.

ble market variety and excellent for home use. See prices next page.

HEROINE PEA.

This is one of the best medium early peas we have yet grown. The vines are strong and vigorous, growing about three feet high. The pods, which are produced in great abundance, are very large, being often five inches long, and well filled with large wrinkled peas, which, when cooked, are of the very best quality, sweet and delicious. We advise everyone who wants a really good pea to sow at least a quart of the Heroine, See prices next page.

"JUNO" PEA.

"JUNO" PEA.

This is a magnificent large "main crop" pea, growing only about two feet high, so that it does not require supports. The pods are rery large and filled right out to the tip with large, dark-green peas, which are very sweet and tender. The vines are very prolific and continue in bear-

ing a long time. Season medium to late. This is one o the very best peas for home use or market. The pods are better filled and the vines are more prolific than any other variety we have grown. Don't fail to have a long row of them,

See prices next page.

PRICE LIST OF PEAS.

IMPORTANT NOTICE.—Unlike the other prices in this catalogue, the prices below do not include postage. If the peas are wanted by mail, add 15 cents per quart, 8 cents per pint, and 4 cents per half pint, for postage.

GOLDEN DAWN PEPPER.

PEPPERS.

One ounce will produce 1,000 plants. Seed should be sown early in hot bed.

COLDEN DAWN—The best and largest yellow variety. The peppers, when ripe, are of a beautiful golden yellow, of fine shape, and of a sweet pleasant flavor. Early and productive. Lb. \$2.25, ¼ lb. 65c., oz. 25c., pkt. 5c.

PROCOPP'S CIANT—The largest of all peppers, growing six to eight inches long. Peppers bright red; thick flesh. Excellent for pickles. ½ lb. 85c., oz. 30c., pkt. 10c.

NEW CELESTIAL—A very ornamental pepper from China. The peppers, before they are ripe, are creamy white, and change when ripe to a bright scarlet, so that there are both red and white peppers on the plant at the same time, presenting an attractive appearance. Oz. 30c., pkt. 10c.

CAYENNE—Best for seasoning pickles. Enormously productive. The peppers are long and slim, bright red when ripe, and of sharp, pungent flavor. Lb. \$2.25, ½ lb. 75c. oz. 25c., pkt. 5c.

Ruby King—A magnificent large, red pepper; in shape like the Golden Dawn (see cut). The vines are vigorous and very productive; the fruit sweet, remarkably mild and of excellent quality. Lb. \$2.50, ½ lb. 75c., oz. 25c., pkt. 5c.

LARGE BELL, or BULL NOSE—One of the hardiest, earliest, largest and best varieties. Bright red, thick flesh and very mild. Lb. \$2.00, ½ lb. 600., oz. 200., pkt. 5c.

POTATOES.

We are large growers of SEED POTATOES, and can furnish the very best stock at LOWEST PRICES. See what we offer on pages 32, 33 and 34. If you will need a number of barrels, write us for prices.

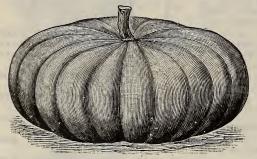

PUMPKINS.

One ounce of seed will plant about 25 hills, CALHOUN PUMPKIN.

MAKES THE BEST PUMPKIN PIES.

This is the finest pumpkin for pies we have ever grown. It does not grow very large, but the flesh is often three inches thick and very solid, so much so that it does not require boiling down like other pumpkins. The pumpkins are round, ribbed, and of a light cream color. The flesh is thick, sweet and fine-grained. Lb. 75c., 1/4 lb. 25c., oz. 10c., pkt. 5c.

Winter Luxury, or Sugar Pumpkin—A small, round, yellow pumpkin, having very fine-grained and sweet flesh; excellent for pies. There is a good demand for these Sugar Pumpkins in market, and as they are enormously productive they make a profitable crop. Lb. 60c., ½ lb. 20c., oz. 10c., pkt. 5c.

LARGE CHEESE PUMPKIN.

Large Cheese — Fine grained and sweet. Large fruit, mottled light green and yellow. The best variety for the South. Lb. 50c., ½ lb. 15c., oz. 8c., pkt. 5c.

Connecticut Field—The common large, yellow pumpkin; the best to grow among corn for stock feeding or pies. Lb. 35c., ½ lb. 15c., oz. 8c., pkt. 5c.

Mammoth Potiron (also called King of Mammoths and Jumbo Pumpkin)—The largest pumpkin grown, often weighing 200 lbs. Salmon colored skin; flesh thick and of good quality. Lb. \$1.00, ½ lb. 30c., oz. 12c., pkt. 5c.

ADISHES.

One ounce of seed will sow 50 feet of row. Do not fail to sow a good bed of radishes. They are appetizing, attractive and healthy, and so easily grown that everyone can raise them without any trouble.

EARLIEST SCARLET WHITE-TIPPED FORCING RADISH.

Also Called "Rosy Cem" and "Rapid Forcing."
This is the earliest radish. We have grown radishes of marketable size in eighteen days from the time of sowing the seed. The radishes are bright red, with pure white tip and very small tops, and are beauties. We have an extra fine strain of this seed. Lb. 65c., 1/4 lb. 20c., oz. 10c, pkt. 5c.

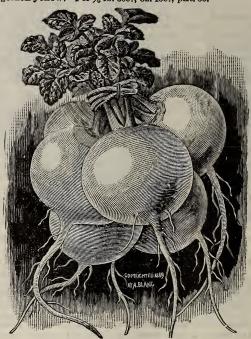

EARLIEST SCARLET WHITE-TIPPED FORCING RADISH.

Earliest Scarlet Forcing (called also Dark Red Ball)-The same as above except it has not the white tip. Seed at the same price.

NEW GOLDEN YELLOW.

These bright, golden yellow radishes are a pleasant contrast to the common red and white varieties, while the quality is equally good. The radishes grow very rapidly and can be used for forcing or to grow in open ground. They are perfectly round, smooth and bright. golden yellow. Per 1/4 lb. 30c., oz. 15c., pkt. 5c.

FELTON'S IMPROVED WHITE BOX.

FELTON'S IMPROVED WHITE BOX.

A magnificent large, rapid-growing white radish. Very handsome and attractive in appearance, solid, and of best quality. It is the best white radish for forcing or outdoor culture. Although not as early as some of the small red varieties, it is so large and handsome that it brings the highest price in market. Lb. 85c., 1/4 lb. 25c., oz. 12c., pkt. 5c.

EARLY SCARLET GLOBE SHORT-TOP RADISH.

Called also "Red Rocket," "Startle" and "Twenty Days."

A very early forcing radish of the finest quality, being perfectly solid, crisp, and of mild flavor. Will form handsome dark red, globe-shaped radishes in twenty days from sowing the seed. One of the best for forcing and out-door culture. Lb. 70c., 1/4 lb. 20c., oz. 10c., pkt. 5c.

Price of the following Standard Varieties: Lb. 50c., I-4 lb. 18c., oz. 8c., pkt. 5c.

Wood's Early Frame-The best long radish for forcing. Long Scarlet Short-Top-Grows 6 to 8 inches long; is straight, smooth and bright scarlet, and of best quality. CHARTIER-The finest long radish. Larger around than above and not quite so long. Smooth, straight, bright

red, with white tip. Very handsome and of fine quality. Remains for a long time without getting stringy.

Scarlet Turnip White Tip-A very attractive little radish. Very early.

French Breakfast - Olive-shaped, with white tip; crisp and tender.

Rose, Olive-Shaped-Early, handsome, and of the best quality.

Round Red, or Scarlet Turnip-Early, dark red, crisp and tender.

Round White Turnip-Same as Round Red except in color

White Strasburg—The best long white radish for summer use; will remain crisp and tender even when very large,

WINTER RADISHES.

CHINESE ROSE.

CHINESE ROSE—One of the very best varieties. Roots five inches long and two inches in diameter. Bright rose color; flesh white, crisp, and of mild, delicate flavor. Lb. 60c., 1/4 lb. 20c., oz. 10c., pkt. 5c.

California Mammoth White—Very large; pure white; roots long, straight and smooth. Lb. 60c., ¼ lb. 20c, oz. 10c., pkt. 5c. Long Black Spanish—A long, smooth radish, nearly the same size at the bottom as the top, and of dark brown color, nearly black. Flesh white and solid. Popular in market. Lb. 55c., ¼ lb. 18c., oz. 8c., pkt. 5c.

Black Spanish Turnip—Similar to above except in shape, which is short and round like a turnip. Lb. 55c., 1 lb. 18c., oz. 8c., pkt. 5c.

RHUBARB,

Or PIE PLANT.

RHUBARB, or PIE PLANT.

Rhubarb Seeds, Victoria—Lb. \$1.60, ½ lb. 50c., oz. 15c., pkt. 5c.

RHUBARB ROOTS, VICTORIA—The best variety. Roots by mail, prepaid, 20c. each; \$1.80 per dozen. By express, not prepaid, 15c. each; \$1.25 per dozen. Roots sent as soon as the weather permits.

SPINACH.

One Ounce of seed will sow 75 feet of row. Sow in early spring for summer use, and in the fall for early spring use. It requires about 15 lbs. per acre.

VICTORIA—The great value of this new spinach is its habit of remaining a long time in good edible condition without going to seed. It is especially valuable on this account for spring sowing. The leaves are thick, broad, dark green and curled, and of the best quality. It is also perfectly hardy and can be sown in the fall for spring use. Lb. 32c., ¼ lb 13c., oz. 8c., pkt. 5c. LARGE THICK-LEAF VIROFLAY—Very large, thick

LARGE THICK-LEAF VIROFLAY—Very large, thick leaves of unsurpassed quality. Very slow to go to seed, and on that account valuable for spring sowing. It is also perfectly hardy, and can be sown in the fall to advantage. Lb. 30c., ½ lb. 13c., oz. 8c., pkt. 5c.

Norfolk Savoy-Leaved (also called Bloomsdale)—A very handsome variety, with curled or blistered leaves like a Savoy cabbage. Quality the very best; very hardy. Lb. 30c., ½ lb. 13c., oz. 8c., pkt. 5c.

NORFOLK SAVOY-LEAVED.

Long Standing—One of the best varieties to sow in the spring, as it remains longer without going to seed than any other. Can also be sown in the fall as it is perfectly hardy. Leaves large, thick, and of fine quality Lb. 30c., ½ lb. 13c., oz. 8c., pkt. 5c.

Round, or Summer—Thick leaves of good quality. It is perfectly hardy, and can be sown in the fall. Lb. 30c., 1/4 lb. 13c., oz. 8c., pkt. 5c.

Prickly, or Winter-Prickly seed; leaves smooth and very hardy. Lb. 30c., 1/4 lb. 13c., oz. 8c., pkt. 5c.

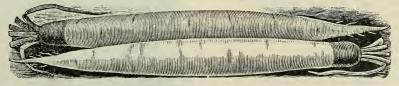

NEW ZEALAND SPINACH.

This is not a true spinach, but a plant that can be used for the same purpose. Produces an abundance of leaves and stems a foot or more in length. Will grow during hot, dry weather when other spinach would be useless, continuing to furnish nice "greens" all summer. The leaves and stems are tender and of excellent flavor. Sow the seed in May in rows 20 inches apart. Lb. \$1.00, ½ lb. 30c., oz. 10c., pkt. 5c.

SALSIFY, or Vegetable Oyster.

One ounce will sow 70 feet of row-8 to 10 lbs. per acre.

Salsify is as easily grown as parsnips, and is more delicate and fine flavored, much resembling oysters in this respect. It is used in the fall and winter and early spring, when there are few other vegetables, and will be very welcome on every table. Do not think of omitting it from your garden.

MAMMOTH SANDWICH ISLAND SALSIFY.

Mammoth Sandwich Island—An improved variety that grows very large, often measuring four to five inches around, and is of the best quality. Roots smooth and straight. Our seed is of extra large and fine strain. Lb. \$1.20, ½ lb. 35c., oz. 15c., pkt. 5c.

SQUASH.

One ounce of summer varieties will plant 35 hills; of winter varieties, 20 hills.

IMPROVED WARTED HUBBARD SQUASH. - From a Photograph.

IMPROVED WARTED HUBBARD.

Pure Dark Green and Warty.

There is no squash superior to a first-class Hubbard. Most Hubbards, however, are of inferior shape and color, being light green with more or less yellow lines. Our improved strain, produced by constant and careful selection, produces squashes of uniform shape, dark green and warty. Such squashes are of the best quality and bring the highest price in market. Seed of our own growing from nothing but the best squashes. Lb. 70c., ½ 1b. 25c., oz. 10c., pkt. 5c.

NEW GIANT CROOKNECK.

This new strain of crookneck squash is twice as large as the old variety and of equally good quality, and a tittle earlier. Fruit bright yellow and very warty. Its LARGE SIZE, earliness and handsome appearance will make it entirely supersede the old variety for market. Vines run more than the old bush crookneck, and should be given more room. Lb. 75c., ½ 1b. 25c., oz. 10c., pkt. 5c.

NEW WHITE CROOKNECK.

A white crookneck squash is certainly a novelty. This new squash is not only pure white, but is very large and early and of the best quality. The fruit is much larger and handsomer than the old yellow crookneck. Oz. 25c., pkt. 10c.

SUMMER AND FALL VARIETIES.

Price of the following well-known varieties:

Lb. 70c., I-4 lb. 20c., oz. IOc., pkt. 5c.

Perfect Cem—A delicious little squash. Perfectly round and pure white. Cooks dry and is of fine flavor. Excellent for summer or early fall use.

Boston Marrow—An excellent fall squash, well known and popular in market. Fruit of good size, deep yellow, and with thick flesh of the best quality.

Early Bush Crookneck—The most popular early summer squash.

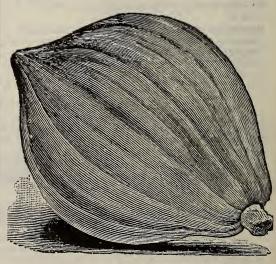

Early Bush Scallop-Flat, white squashes, scalloped around the edge,

Prolific, or Early Orange Marrow—The best fall squash. Fruit deep orange color, with thick yellow flesh of the finest quality. It is earlier than the Boston Marrow and more prolific, and an improvement on that excellent variety. It is the finest squash for fall or winter use.

SIBLEY, or PIKE'S PEAK—One of the finest winter squashes. Will keep all winter. Cooks dry and is of fine, nutty flavor. The fruit is of medium size, light green and smooth, with a hard, thin rind. Seed very difficult to germinate.

Marblehead—Fruit light green, smooth, and of medium size. Flesh thick, yellow, and cooks dry, and is of the finest quality.

Essex Hybrid—A very sweet, fine grained and high-flavored squash. Flesh very thick, deep yellow and firm. Will keep all winter.

PROLIFIC, or EARLY ORANGE MARROW SQUASH.

TOMATOES.

One ounce of seed will produce about 2,000 plants.

We make a specialty of growing the finest improved varieties of Tomatoes, and now, after selecting our seed stock from the largest, smoothest and most solid Tomatoes for years, we have some of the finest strains in existence.

Notes on Varieties.—There are two classes of red Tomatoes. The one with bright, deep red fruit and the other with fruit of a purplish red or pink. To the first class belong Favorite, Perfection, Early Ruby, and Stone. This color is demanded by the canning establishments. To the purple fruited class belong Potomac, Beauty, Dwarf Champion, and the old Acme and many others. This color is the most attractive, and this class embraces some of the best and most popular varieties.

The earliest Tomatoes are either quite small like Early Minnesota, or if large, like Early Ruby, are not as regular and of as fine quality as the later kinds. It is well to plant some of the earliest kinds, but some later ones should also be planted.

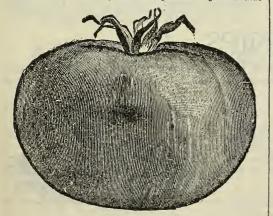

POTOMAC TOMATO.

Unequaled in Quality. Enormously Productive. Large, Solid, and Absolutely Smooth.

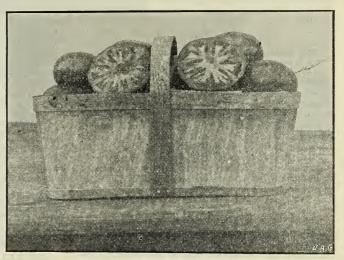

We have raised tomatoes for many years, and have tried all the new kinds, yet have never seen a variety quite equal to the Potomac as we now grow it. The accompanying engraving gives some idea of the size and solidity of this magnificent tomato. The seed was sent us some years ago by a friend on the Potomac River, and we have greatly improved it since, until now we have a tomato of large size, remarkably solid, and of quality that is unequaled. It is also very productive and early, ripening nearly the whole crop of fruit before frost in the Northern States. The tomatoes contain fewer seeds and have more solid flesh in them than any other kind. The color is a deep pink, a little darker than the Acme. For table use, canning and for market they are the finest tomato grown. Don't de-

pend upon the ordinary kinds for your own use. Raise the **Potomac** and have the **best.** They are also the most profitable tomatoes to raise for market. Lb. \$3.00, ½ lb. \$0c., oz. 25c., pkt 10c.

Potomac the Best of All.—Mr. J. M. Long, of East Wintbrop, Me., says: "The Potomac Tomato was the best of all. I don't think it is generally appreciated as it should be. We tried over 20 of the leading kinds to get one that

DWARF CHAMPION TOMATO.

POTOMAC TOMATO. - From a Photograph.

was of first-class flavor, solid, smooth, and not too late for the Northern latitude. Potomac seems to be as solid and delictous as any, and in addition proved prolific, of good size and smooth enough for anybody. My wife will not eat any other kind now. I have found the tomato I was after."

STONE TOMATO.

This is probably the best bright red or scarlet tomato. The fruit is very large, smooth and solid. It is a great favorite with the canners on account of its deep red color and firm, solid fruit. It is enormously productive, medium late, and a strong grower. Fruit of first-class quality. One of the best late varieties for market and home use. Seed of our own growing from selected fruit, Lib. \$2.00, ½ lb. 60c., oz. 20c., pkt. 5c.

DWARF CHAMPION TOMATO.

Very Early, Fine Quality, Takes but Little Room, Yields Well—One of the Best Tomatoes for Home Use and Market.

The plants of this variety grow very stocky, with a stiff, upright stem that holds the fruit off the ground until quite large. The fruit is of good size, as smooth as an apple, of bright crimson color, solid, and of the best quality. The plants grow so compact that they can be planted closer together than other varieties, and in this way a very large yield can be obtained from a small piece of land. Our strain of this variety is superior to any other dwarf or "tree" tomato, and will please all who grow it. Lb. \$3.0°, ½ lb. 80c., oz. 25c., pkt. 5c.

Other varieties on next page,

HONOR BRIGHT TOMATO.

This is a new tomato of a very distinct nature. Its peculiar characteristic is that the fruit instead of turning from green to red, as other varieties do, first becomes white then yellow, and lastly turns to a very brilliant red when fully ripe. This peculiar change of color enables one to judge the proper time for picking for long distance shipping, for which purpose the Honor Bright is well adapted, being remarkably solid and keeps a long time after picking. It is enormously productive and of vigorous growth, with peculiar yellowish-green foliage. The quality of the fruit is very fine. It is a splendid main crop tomato, following after the earliest kinds and bearing fine fruit until frost. Seed of our own raising. 1/4 lb. \$1.00, oz. 30c., pkt. 10c.

White, Yellow and Red Fruit on Same Stem.

EARLY RUBY.
The Earliest Smooth Tomato of Large Size.

This is not only one of the earliest varieties, but our improved strain produces tomatoes of large size and perfectly smooth and regular. This cannot be said of any other extra early tomato, all of which are either irregular or small. When this variety was first introduced it was not regular enough to suit us, but we have for a number of years been selecting the earliest and smoothest fruit for seed, and have now obtained a strain that is unsurpassed for earliness, smoothness and large size. The quality of the tomato is not quite as good as Dwarf Champion or Potomac, but the Early Ruby will ripen its whole crop very early, and on this account is valuable for market and for those who have difficulty in getting tomatoes to ripen. Lb. \$2.50. ½ lb. 70c., oz. 20c., pkt. 5c.

BOND'S EARLY MINNESOTA.

This new early tomato grows to a medium size, is perfectly smooth and of the finest quality, which cannot be said of any other extra early variety with which we are acquainted. For those who do not care for very large size, but want nice, smooth tomatoes of the best quality, and want them early, the Early Minnesota will be a pleasing acquisition. 34 lb. 80c., oz. 25c., pkt. 5c.

Price of any of the following varieties: Lb. \$2.00, 1-4 lb. 65c., oz. 20c., pkt. 5c.

Livingston's Beauty—A very fine tomato. The fruit is so smooth, regular and even in size that they look as though east in a mould. It is a very heavy cropper, medium early and a strong grower. Fine for market or canning. Color pink.

IMPERIAL—This new tomato possesses so many excellent points that it has become very popular wherever grown. It is a remarkably large, smooth, handsome tomato, deep pink and very firm and solid.

ICNOTUM—The fruit is uniformly very large and remarkably firm and solid. The color is a rich scarlet and even all over the fruit without leaving any green around the stem.

EARLY LEADER—The Early Leader will ripen its fruit earlier than any other tomato, but like most of the early varieties the first is not as solid and fine-flavored as some of the later sorts. The fruit is of good size and good color and the vines are very prolific.

Golden Queen—The best yellow tomato. Fruit as smooth as an apple and of a beautiful color and fine quality.

Optimus—Early, smooth, bright scarlet, of best quality.

Mikado, or Turner's Hybrid — Very large, solid fruit, somewhat irregular in shape; quite early.

somewnat irregular in snape; quite early.

Livingston's Favorite—A very popular variety. Fruit deep red, large and smooth. A heavy cropper.

Perfection—Very similar to above. Used largely for canning.

Paragon-Large, smooth, dark red. Very popular. Trophy and Acme-Both well-known varieties.

SMALL-FRUITED TOMATOES.

NEW PEACH—The fruit resembles a peach so much in size, shape and color that people are often deceived by it. It has even the bloom or fuzz of the peach, which is found on no other tomato. The fruit is of a sweet, pleasant flavor, and is good eaten from the hand like a peach. Oz. 30c., pkt. 5c.

Yellow Plum-Plum-shaped; bright yellow. Fine for preserves. Oz. 35c., pkt. 5c.

CROUND CHERRY, or HUSK TOMATO (Also called Strawberry Tomato, or Winter Cherry)—Little yellow fruit that grows in a husk, and of very peculiar flavor. Used principally for preserves. Oz. 30c., pkt. 5c.

TURNIPS.

One ounce of seed will sow 150 feet of row. It requires from 2 to 4 lbs. of seed per acre, depending upon the distance between the rows.

KASHMYR.

A Bright Red Turnip.

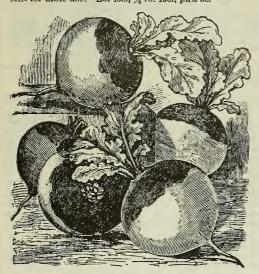

A bright scarlet turnip is certainly a novelty. The Kashmyr Turnip looks like a large, flat radish, deep scarlet on top shading to light rose color on the bottom. Flesh pure white and of the best quality. This is a very early turnip and can be raised like the common Purple Top Strap Leaf Turnip. Don't fail to try it. Per ½ 1b. 25c., oz. 10c., pkt. 5c.

Early Purple-Top Milan—This new variety much resembles the above, but is two weeks earlier, being the earliest variety in cultivation. The bulbs are clear white, smooth and handsome, with purple top. Lb. 70c., 1/4 lb. 20c., oz. 10c., pkt. 5c.

EARLY PURPLE TOP MILAN.

Red Top White Globe—Large, pure, white, globe-shaped turnip with red top. Very handsome, heavy yielder and early. A profitable turnip for market and excelent for table use. Lb. 45c., ¼ lb. 15c., pkt. 5c.

RED-TOP WHITE GLOBE TURNIP.

Purple-Top Strap-Leaf—The favorite variety for summer and autumn use. Turnips flat, clear white, with purple top. We have a fine strain. Lb. 45c., 1/4 lb. 15c., pkt. 5c.

White Flat Dutch—Very early; pure white and of the best quality. Lb. 50c., ½ lb. 15c., pkt. 5c.

Early Yellow Stone—An early, flat, yellow turnip of fine quality. Lb. 50c., ¼ lb. 15c., pkt 5c.

Yellow Aberdeen—A large, globe-shaped, yellow turnip. Fine for use in the fall or early winter, or for stock feeding. A heavy cropper. Lb. 50c., ¼ lb. 15c., pkt. 5c.

Colden Ball—A handsome, early, yellow turnip, as round as a ball, and of the best quality. Lb. 50c., ½ lb. 15c., pkt 5c.

RUTA BAGAS,

Or SWEDE TURNIPS.

This class of turnips have smooth leaves quite distinct from the common or rough leaf turnips. They are much later and keep better than common early turnips. They are excellent for table use in the winter. For this purpose the seed should be sown quite late so the turnip will not grow too large and coarse. For stock feeding the seed can be sown earlier and large crops obtained.

NEW WHITE SHORT TOP.

This is a very handsome white ruta baga with remarkably short tops and no "neck." Turnips are light green on top and pure white on the bottom. Grows to a good size, and are of fine quality. We strongly recommend this variety for home use and market where a white ruta baga is desired. Lb. 60c., 1/4 lb. 18c., oz. 10c., pkt. 5c.

HARRIS' WHITE PURPLE-TOP—A large, fine white ruta baga, with purple top, making a very handsome turnip. They are of fine grain and of excellent quality. Lb. 60c., ½ lb. 18c., oz. 10c., pkt. 5c.

BREAD STONE TURNIP—This is without exception the best table turnip we have ever eaten. When cooked it is almost as dry and sweet as a good squash. It belongs to the Ruta Baga or Swede Turnip class, but is smaller and earlier than ordinary ruta bagas. It can be sown at any time from the first of July to the first of August. It is in good edible condition in November, and will keep perfectly fresh and good all winter. Lb. 60c., ¼ lb. 18c., oz. 10c., pkt. 5c.

Imperial Purple-Top—The most popular variety. Large, handsome, globe-shaped yellow turnip, with purple top. One of the best varieties for table use. market or stock feeding. Lb. 45c., ½ lb. 15c., pkt. 5c.

White Sweet, or French—Globe-shaped white turnip, with green top, and of excellent quality. Lb. 45c., ½ lb. 15c., pkt. 5c.

TOBACCO.

We can furnish first-class seed of the following varieties of tabacco that has been grown with great care by one of the best growers in this country.

Connecticut Seed Leaf—The most popular variety. 1/2 lb. 70c., oz. 25c., pkt. 5c.

Sterling—Early, and valuable for the North. Color bright yellow, and of the finest quality. ½ lb. 75c., oz. 25c., pkt. 5c.

Havana—The finest Cuban tobacco, so famous for eigars. ¼ lb. \$1.00, oz. 30c., pkt, 10c.,

AROMATIC AND SWEET HERBS.

BORACE—Sow seed in the spring in the open ground. Oz. 15c., pkt. 5c.

CARAWAY—Sow in spring or fall. Very easily grown. 1/4 lb. 25c., oz. 10c., pkt. 5c.

CORIANDER—The young green leaves are used for flavoring soups, salads, etc. Sow in the spring in the open ground. 1/4 lb. 20c., oz. 5c.

DILL—Used for flavoring cucumber pickles, etc. ½ lb. 25c., oz. 10c., pkt. 5c.

ROSEMARY—A perennial, and will last for years when once started. Sow in the spring in the open ground where the plants are to remain, Oz. 30c., pkt. 5c.

SACE—When once started will last for years. Should be in every garden. Sow in the open ground and thin the plants to four or five inches apart. Lb. \$1.50, ½ lb. 45c., oz. 15c., pkt. 5c.

SUMMER SAVORY—Easily grown by sowing seed in the open ground in the spring. ½ lb. 30c., oz. 10c., pkt. 5c.

SWEET MARJORAM—Very valuable for seasoning dressing for poultry, imparting a very agreeable and pleasant flavor, Easily grown from seed. Cultivate like sage. ½ lb. 40c., oz. 15c., pkt. 5c.

THYME—Start the seed in a box in the house or hot-bed, and set out the plants when the ground is warm. Oz. 20c., pkt. 10c.

Wholesale Price List for 1900.

When seeds are ordered at the prices quoted in this list, they will be sent by Express or Freight at the expense of the purchaser, but not by Mail. When the seeds ordered will weigh fifty pounds or more, it is usually cheaper to have them sent by freight than by express. Smaller packages than fifty pounds should be sent by express.

MARKET GARDENERS who use a considerable quantity of seed will do well to send us their list for Special Quotations. DISCOUNT ON CLUB ORDERS.—It will pay to get up a club for our seeds and have them sent by express or freight. On such orders we will allow ten per cent. discount from prices quoted in this list, but the above discount does not apply to Peas. Beans or Corn ordered at bushel rates, nor Potatoes, Farm Seeds and Fertilizers. On these we can allow no discount. See special offer on page 3.

DISCOUNT ON LARGE ORDERS.—On any order for seeds, ordered at the prices quoted in this list, amounting to \$10.00 or more, we will allow a discount often per cent, with the same exceptions as above.

Please observe that we cannot send seeds by Mail when ordered at these prices.

All Seeds Not on This List will be Sent by Express or Freight at Ten Cents Per Pound Less Than the Prices Quoted in This Catalogue.

The Growing of the Newest and Best Varieties of Potatoes Especially for Seed is One of Our Leading Specialties.

There is a vast difference between potatoes grown especially for seed where great care is used to keep them pure and free from diseases, and those often sold and used for the purpose, which are usually grown with very little regard for their purity or fitness for seed purposes and are more than likely to be affected with blight.

Keeping Potatoes for Seed—Many good seed potatoes are ruined by being kept in too warm and dry places. This is especially true of much of the seed sent out by seedsmen who do not raise their stock but buy it in the fall and keep in cellars where they evaporate and become withered long before

they get to the planter.

Another very important point especially with early varieties is to raise the seed from very lateplanted potatoes. We plant our early varieties not before the middle of June, so that they do not mature until the cool weather in the fall, and consequently keep very much better than potatoes

ripened in August and exposed to the hot weather for two months before storing.

We store our potatoes in root cellars and pits where they are covered so that the light and air cannot reach them, and they consequently remain in sound condition until late in the spring. Orders are filled and shipped direct from the cellars so that the potatoes are not exposed longer than absolutely necessary. Therefore they reach the planter in the best possible condition.

The potatoes we offer are all grown by ourselves from pure selected stocks of each variety and were not affected with the blight.

PRICES—The prices quoted in this catalogue are for early orders only, and are subject to market changes. We make no charge for barrels or boxes and deliver the potatoes at any freight depot in Rochester without extra charge, but we do not prepay the freight, which must be paid by the purchaser.

Write us for Special Prices-We are always glad to quote prices on potatoes when any con-

siderable quantity is required (3 barrels or more).

The barrels we use hold 3 bushels, 180 lbs. net, instead of 23 bushels, as usually sold for a barrel.

EARLY VARIETIES.

Properly grown seed of extra early varieties of potatoes is very scarce this season. The seed we offer is very nice, smooth and clean, but does not run as large as some years, yet we send nothing smaller than a hen's egg.

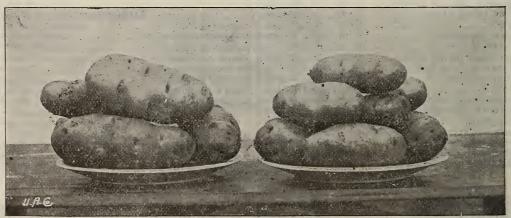

BLISS' TRIUMPH.

This is undoubtedly the earliest potato. It is the variety grown in Bermuda and shipped to our markets in the early spring. It is a round, red potato of fine quality. Peck 50c., bushel \$1.75, barrel (3 bushels) \$4.50.

EARLY HARVEST.

We have raised the Early Harvest for a number of years. and are convinced that there are very few early potatoes equal to it in size, yield, quality and earliness. It is a long, white potato with numerous eyes and smooth skin. The "table qualities" are fine, and the yield very large on good land. The potatoes grow as large as most late kinds and yet they mature very early. The demand for this variety has always been greater than the supply and this year promises to be no exception.

PRICE-Peck, 50c., bushel \$1.75, barrel, \$4.50.

EARLY HARVEST.

(From a Photograph.)

EARLY MAY.

EARLY MAY.—Very Early and a Great Yielder.

We have sold the Early May Potatoes for three years now and they have given the best of satisfaction everywhere. They are earlier with us than any variety we have tried except Triumph, and they yield much better than others and twice as much as Triumph, and are handsomer potatoes. In 1898 we harvested 300 bushels from 1½ acres, and this was not a very good season. The past season was so extremely dry here that the yield was not so good, yet they did well under the circumstances. There is no doubt but that the Early May is one of the finest early varieties ever grown in this country. The potatoes are light pink, long, smooth, with shallow eyes. The vines grow stocky, thrifty and vigorous.

PRICE OF EARLY MAY POTATOES-By mail, I lb. 35c., 3 lbs. 80c. By express or freight, peck 60c.,

bushel \$1.75, barrel, \$4.75. Special prices on larger quantities quoted on application.

EARLY PRIDE.

We were surprised at the good showing this variety made the past season. It yielded better than any other extra early variety we had planted for seed, and made an equally good showing in our test grounds. It is a variety of the Hebron type; color white, shading to pink around the eyes; shape oval, eyes small and close to the surface; vine makes a strong bushy growth. This potato resembles New Queen but ripens considerably earlier. This is a first-class variety for market or home use.

This is a first class variety for market or home use. Peck 50c., bushel \$1.75, barrel (3 bushels) \$4.50.

EARLY THOROUGHBRED.

This is a "Thoroughbred" Early Rose. There is practically no difference between this and the old Early Rose except that perhaps the Thoroughbred runs more even in size and shape and has shallower eyes. Ripens about the same time as New Queen but can be used quite early. A good yielder.

Peck 50c., bushel \$1.60, barrel \$4.25.

BOVEE.

This new early potato resembles the Early Hebron and New Queen in shape and color, but is earlier than either of these well known varieties. It yields remarkably well and the potatoes are very even in size and smooth and handsome. The color varies, some tubers having more pink on them than others. The vines grow stocky and vigorous and the yield with us has been large. We have some nice pure seed of the genuine Bovee, introduced by Henderson & Co.

EARLY MICHIGAN.

A white, smooth, early potato of nice oval shape and fine quality. A much advertised variety, but has not done as well with us as some others.

Peck 50c, bushel \$1.50, barrel \$4.00.

NEW QUEEN.

A standard variety. Yields larger crops and resists blight better than any other early potato we know of. It does not get ripe as early as the extra early kinds, but gets to a marketable size nearly as early.

Peck 50c, bushel \$1.50, barrel \$4.00.

EARLY FORTUNE.

This early potato has become quite popular wherever grown. It is of the Hebron class, very early and a good yielder.

Peck 50c., bushel \$1.75, barrel \$4.50.

PRICE-By mail, I lb. 35c., 3 lbs. 80c. By expres or freight, peck, 60c., bushel \$1.75, barrel \$4.50.

LATE OR MAIN CROP VARIETIES.

SIR WALTER RALEIGH.

The New Carman Seedling.

The three most popular main-crop potatoes now grown, we think, without doubt, are the three Carman seedlings, Carman No. 1, Rural New Yorker No. 2 and Carman No. 3. These potatoes are all of a quite distinct shape and

Photograph of Sir Walter Raleigh Potato.

habit of growth. They are all great yielders and are remarkably free from diseases which potatoes are heir to.

The new Carman seedling, Sir Walter Raleigh, is the most recent production of Mr. Carman's skill. We have raised it since its introduction and are convinced that it is the best of the lot. The vines have the same purple tinge as those of the rural New Yorker No. 2 and Carman No. 3, and have the same property of resisting blight. The potatoes, however, are of better form, with shallower eyes, are of better quality and produce more in a hill, and do not grow so large and coarse as these varieties are apt to do in a favorable season. There is probably no other variety of potatoes that will do better than the Sir Walter Raleigh under all circumstances. They ripen perhaps a little later than Rural New Yorker No. 2. We offer some fine pure seed. There are a great many Carman No. 3 being sold for this improved variety.

Peck 50c., bushel \$1.50, barrel \$3.75.

GOT FIRST PREMIUM.

Mr. Geo. M. Wilder, of Hillsboro County, N. H., writes us October 27th: "We captured first premium on Washington and Sir Walter Raleigh potatoes, grown from seed bought of you Spring '29, at Oak Park Fair, Oct. 12-14. The Washingtons are the best out of eleven kinds with me this year."

LATE OR MAIN CROP VARIETIES—Continued.

UNCLE SAM.

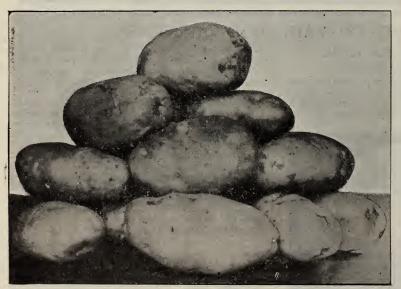

There are many potatoes that yield well but not many that combine with this first class quality nice shape and fine white color-all these desirable qualities we have in Uncle Sam. Our photograph shows the shape of the potatoes. They are not so round as the Carman varieties, nor so long as the old White Star and similar kinds. The vines make a strong stocky growth and produce a good number of potatoes of the most desirable size. The quality of the potatoes when cooked is superb. It also gave us the largest yield of any variety we had this season. This variety does best on rather light or sandy land. For heavy land we would recommend Sir Walter Raleigh in preference to Uncle Sam, but where fine quality is a desirable

UNCLE SAM.-From a Photograph.

point and the land is fairly light we think Uncle Sam will be found most satisfactory. Per peck 50c., bushel \$1.50, barrel \$3.75.

WASHINGTON.—The Best Yielding and Handsomest Potato Grown.

WASHINGTON POTATO. - From a Photograph.

We introduced this remarkable potato in 1897, and it has proved itself to be what we claimed it was, the largest yielding smooth white potato grown. The potatoes, as shown in our photograph, are of a distinct form, being intermediate between a long and a round potato, making a very desirable shape. The skin is very remarkably white. This combined with its perfect shape and shallow eyes make it a very handsome potato. The quality is good. The vines grow with wonderful vigor the stalks being often as thick as your thumb and the foliage completely covering the ground. This potato does best on rather light land. We would not recommend it for heavy land although it will do as well on such land as most of the varieties used. On sandy loam, however, it produces wonderful crops of beautiful po-

Price of Washington Potatoes.—We offer some very fine stock of Washingtons this year, as follows: By Mail—I lb. 35c., 3 lbs. 85c. By Express or Freight—Peck 50c., bu. \$1.75, bbl. \$4.50, 2 bbls. \$8.50.

FARM AND FIELD SEEDS.

Too little attention is paid by farmers to getting the best and purest strains of Field Corn, Oats, Wheat, Etc. If some agent comes around and says he has a new variety that will yield 100 bushels per acre, a good many will buy it and when it turns out to be no better than common kinds they get to think that there are no better varieties than those commonly grown. This is a mistake. There are no such wonderful improvements as some dealers try to make us believe, but well-bred, pure strains, of the most productive known varieties will always produce more per acre and give crops of better quality than ordinary seed.

The cost of seed of improved varieties is very little more per acre than ordinary seed. There is no investment that will yield better returns than the purchase of well-bred seeds. Take corn for instance. It requires only about eight quarts to plant an acre. This quantity will cost, say 40c. An equal quantity of common corn would be worth about 15c., making a difference of 25c. per acre for the improved seed. If the yield is only 2 or 3 bushels per acre more than from the common seed, there would be a good profit, but the increase in crop is likely to be very much more than this; 10 to 20 bushels increase per acre being not at all uncommon. Twenty-five cents for 10 bushels of corn is cheap.

We offer a few varieties which we believe are marked improvements over those usually grown. At the prices quoted we deliver the seeds at freight depots in Rochester, and make no charge for bags. The purchaser is to pay the freight charges. Special prices will be quoted on large quantities.

A New Early Corn for the North.

"THE FARMER'S FRIEND."

One of our old customers in Vermont, Mr. E. S. McNall, of Chittenden County, in the northern part of the state, wrote us this fall as follows:

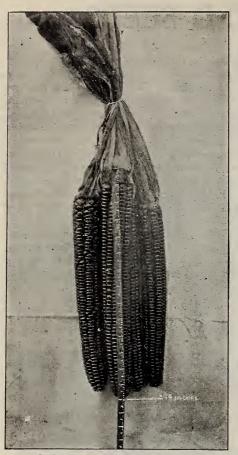

"DEAR SIRS:-I take the liberty to address you, being an old customer and a satisfied one. having used your seeds, both vegetable and flowers and corn, Mammoth Yellow Flint, which I raised for four years. Now I have a corn grown and named by me, which is superior to the Mammoth Yellow Flint. It is a perfect corn for the northern states. It is two weeks earlier than the Mammoth, will yield onefourth more with same treatment and produces better fodder. It will ripen in 85 to 90 days from planting. The ears will average about 10 inches long, very small cob with the largest kernels you ever saw. Every ear will fill out to the very tip. This corn on pine plain land (light soil) grows not over 6 ft. high. Planted 31/4 ft, apart will completely cover the ground. This year I had one acre of this corn planted on light soil without manure, planted the first week in June, was cut and stacked the last of August. Every ear was sound. I husked out 187 bushels of sound corn-not one ear of soft. This corn, "The Farmer's Friend," is the best corn for the North that has ever been introduced in the opinion of all that have seen it Yours truly, growing.

"E. S. MCNALL."

"THE FARMER'S FRIEND."

Mr. McNall sent us a sample box of ears which were the finest sample of Yellow Flint corn we have ever seen. We were so much pleased with the looks of the corn that, contrary to our rules, we bought all the seed of this variety Mr. McNall had and offer it to our customers without having tried it ourselves. Judging from the ears this is evidently a "Thoroughbred" Yellow Flint corn with ears of medium length and very large kernels, remarkably uniform in size and color. We present above a photograph of a few ears showing how remarkably well they are filled out to the tip and the larger size of the kernels. The ears are shorter than those of our Mammoth Yellow Flint corn, but if it is as Mr. McNall claims, 2 weeks earlier, this variety will be of great value to those living in the northern part of the country, and to all who wish to cut their corn early and sow wheat on the land, or to save the fodder from injury by frost. PRICE—Shelled Corn from finest ears—By Mall, postpaid, pint 20c., quart 35c. By Freight or Express, quart 25c., peck \$1.10, bushel \$3.25.

HARRIS' MAMMOTH YELLOW FLINT CORN. Ears 12 to 15 Inches Long.

now found a variety that not only has a large ear and is a prolific bearer, but that will get ripe in this latitude. The past season was most unfavorable for corn, being dry and cold, yet our crop of this variety did well. The ears were of good size and they ripened hard and dry, and practically all of it sound corn. The corn was cut before frost and the fodder is of excellent quality. There was less soft and immature ears among those of this Dent corn than in the Flint varieties, and the yield was greater. The stalks grow 7 to 8 feet high and produce very large, heavy ears with 14 to 16 rows. Cob small. The tips of the kernels are white, and the rest yellow; hence the name "White Cap."

We recommend this variety for good corn land, especially "bottom land," where it will yield great crops. Our seed grown in the northern latitude is much better than southern or western grown seed. Price of shelled corn from finest ears. Peck 50c., Bushel \$1.60, 2 bushels \$3.00.

Dwarf Essex Rape.

The Best Forage Crop for Sheep, Hogs and Cattle.

We find Dwarf Essex Rape of the greatest benefit in raising sheep, and it is also very valuable as forage for hogs and cattle. Sown early in the spring it furnishes pasturage of the richest kind for sheep or hogs. It does best however, if sown in August, when it will grow very rapidly and produce an enormous amount of green succulent food all through the fall.

It is a plant belonging to the cabbage family. It produces a mass of broad, smooth leaves which are greatly relished by sheep. It grows about 3 feet high. It can be pastured off and when the stock is removed will grow up again and give a second crop.

It does best on rather moist land, but will do well on any good soil. It is best to sow the seed in drills, 18 to 22 inches apart, but it can be sown broadcast to good advantage. It requires about 5 lbs. of seed per

Harris' Mammoth Yellow Flint Corn

We have been "breeding up" a strain of Yellow Flint Corn to as near an ideal type as we can. What we select from is: 1st-Long, well developed ears. 2d-Two ears on a stalk. 3d-Vigorous growth of stalk and leaves and early maturity.

We have the result of selecting on these lines in Harris' Mammoth Yellow Flint Corn. The ears of this variety grow long with good large kernels and small cap. A large percentage of the stalks produce two ears-ears often measure 14 inches long. The stalks grow 6 to 7 feet tall with a large amount of leaves making excellent fodder. Ears fill out well if given a chance. There should not be over 3 stalks in a hill to get the best results. We have harvested 180 bushels per acre on a large field with hardly a bushel per acre of soft corn. This corn can be cut in about 90 days from the time it comes up. Don't plant ordinary corn when you can get this improved variety at the low prices we offer it. Price of shelled corn from selected ears. Peck 50c., bushel \$1.60, 2 bushels \$3.00.

Mr. J. D. Milton, of Seneca Co. N. Y., writes us Nov. 14, 1899:
After the most unfavorable season we have had for years "The
Field Corn (Mammoth Yellow Flint) I bought of you last spring
was the best I ever raised."

White Cap Yellow Dent.

A Dent Corn for the Northern States.

The longer we raise this variety the more surprised we are that there is not more of it raised in this lati-

It is a well-known fact that Dent corn yields more than Flint corn, but most of the varieties being later than the Flint, very little of it is grown in the North-Eastern states. We have

WHITE CAP YELLOW DENT CORN. From a Photograph,

acre. If sown in drills it should be cultivated once. It can be sown on corn ground before cutting the corn, and will make good pasture after removing the corn.

Seed of the genuine DWARF ESSEX RAPE—Postpaid, 20c. per ib. By freight or express, 10c. per ib., 10 lbs, or more at 8c. per ib. Special prices on larger lots quoted by letter.

New Danish Island Oats.

Three years ago we came across a variety of Oats from Denmark called Danish Island, which was in many respects superior to any oats we had hitherto seen. They have a plump heavy grain without the objectionable thick hull which is so detrimental to the feeding qualities of almost all heavy varieties. The straw is stiff and the plant of vigorous branching habit. Our cut is a photograph of a single head, which shows the habit of growth. They have yielded with us over 25 bushels per acre more than other kinds in the adjoining fields. The oats being white, plump and heavy, bring the highest prices in market. The plant is of such vigorous growth that a smaller quantity of seed should be used than of most other varieties. We use 1½ measured bushels per acre.

PRICE—Peck 40c., measured bushel (38 lbs.) \$1.00, 3 measured bushels, enough for two acres, \$2.75, 10 bushels (measured) \$8.00. Special prices given on larger lots.

Please notice that we sell measured bushels weighing 38 lbs., instead of the legal bushel of 32 lbs. Our price for 10 bushels is equal to 67c. per bushel of 32 lbs.

Improved American Oats.

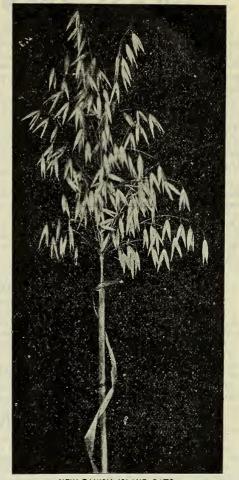

We introduced this variety a good many years ago, and it has proved to be one of the best early white oats ever grown in this country. It has made such a record that one or two seedsmen have recently catalogued it as a new variety. It is a branching oat, plump, white grain with thin hulls, stiff straw and ripens very early; yields large crop of grain of the finest quality.

Price of carefully cleaned seed, free from all weed seeds, Peck 40c., bushel (32 lbs.) \$1.00, 4 bushels (enough to sow 2 acres) \$3.50.

Canada Field Peas.

These peas are used principally for their vines, which make hay equal to the best clover hay. They are usually sown with oats and cut when the oats heads out, but before the grain is ripe. If any one is likely to be short of hay, he will do well to sow a few acres of oats and peas. We have used this hay for sheep, cows and horses with the best results. It is as easily cured as clover, and will yield larger crops. We use 2 bushels of peas and 1 bushel of oats per acre. Sow early in the spring.

White Canada Field Peas—Peck, 50c., bushel \$1.50, 2 bushels \$2.75. Special prices quoted on larger lots.

NEW DANISH ISLAND OATS. From a Photograph.

Cow Peas.

The Cow Pea is really a bean. It is used very extensively in the southern states as a green crop to plow under in order to enrich the soil. Like other plants or the pea and bean variety, the cow peas has the property of assimilating nitrogen from the atmosphere, and when the crop is plowed under it adds greatly to the fertility of the soil. Cow peas are injured by frost and should therefore not be sown until danger of frost is past. They are now beginning to be used in the northern states, and while they will not ripen seed here they will produce a large crop of green stuff to be plowed under.

EARLY BLACK COW PEAS—The best variety for the north—Peck 6Oc., bushel \$2.00.

Corn for Fodder and Ensilage.

The richest, most tender and most digestible fodder is grown from Evergreen Sweet Corn. The stalks grow 7 to 8 feet high, and yet can be eaten by cattle right down to the butts, if cut while green and properly cured and fed. We can furnish this Evergreen Sweet Corn at \$1.50 per bushel, or 2 bushels for \$2.75.

We sow corn for fodder with a grain drill, using two pipes together and stop three, then two more and stop the next three, which makes the rows 18 inches apart. This gives room to cultivate on each side of the double rows. It takes about 1½ bushels of corn to sow an acre in this way. It is also sown in single rows, 22 to 28 inches apart. This requires about 1½ ushel of corn per acre.

GRASS AND CLOVER SEED.

We can furnish re-cleaned Grass and Clover seeds th are pure and free from weed seeds at the following price If any seeds are wanted by mail, please add 8 cents p

Harris' Grass Seed Mixture.

For Hay or Permanent Pasture.

For hay and permanent pasture combined, Harris' Grass Mixture will be found unsurpassed. It consists of Orchard Grass, Red, Alsike, and White Clover, English and Italian Rye Grass, Meadow Fescue, Meadow Foxtail, Tall Meadow Oat Grass, True Perennial, Sweet Scented Vernal Grass, Kentucky Blue Grass, Timothy and Red Top. This mixture can be sown in the spring or autumn, with or without grain. If sown alone, sow four bushels per acre; if with grain, three bushels per acre.

Harris' Crass and Clover Seed Mixture—By mail, 35c, per lb., 3 lbs. \$1 00 By freight or express, pk. 85c., bu. (20 lbs.) \$3.00. No charge for bags.

Harris' Lawn Grass Seed.

Composed of Extra Re-cleaned Seed of the Finest Crasses for Lawns.

To obtain a thick, even, rich, dark green lawn, there is nothing more important than good seed. Most of the lawn grass seed sold is composed of ordinary cheap grass seed, not half cleaned, and full of weed seeds that fill the lawn with foul weeds and spoil its beauty. Such seed is full of chaff and much lighter than clear seed.

Harris' Lawn Grass Seed is a mixture of the finest grasses, such as produce thick, velvety lawns, and only the cleanest and heaviest seed is used, thus insuring purity and strong vitality. The seed weighs 24 lbs. per bushel, while ordinary lawn grass seed weighs only 14 lbs per bushel, thus a bushel of our seed is equal to nearly two bushels of ordinary seed. In comparing prices this fact should not be overlooked.

Price of Harris' Lawn Grass Seed—By mail, postpaid, per lb. (1½ qts.) 45c., 3 lbs. or more at 40c. per lb. By express or freight, not prepaid, per peck (6 lbs.) \$1.25, per bushel (24 lbs.) \$4.00.

How to Make a Lawn.

The land should be plowed or spaded as early in the spring as possible, and thoroughly raked over, so that it is perfectly level on the surface. If the land is hard or very poor it is well to spread a layer of muck or rich earth over the surface an inch or two deep, and also to apply a dressing of manure or fertilizer composed of equal parts of nitrate of soda and superphosphate or bone meal, using 10 to 15 pounds per square rod. This should be raked into the soil and the seed sown broadcast as evenly as possible at the rate of one pound (1½ quarts) per square rod, or five bushels per acre. The seed should also be raked in. On old lawns that need re-invigorating sow a half pound of seed per square rod, and same quantity of fertilizer as recommended above.

FERTILIZERS FOR LAWNS.—See page 61.

New Japanese Millet.

(Panicum Crus-Gali.)

This new variety of Barn Grass or Millet was obtained from Japan by Prof. Brooks, of the Massachusetts Agricultural College, a few years ago. We have raised the millet for two or three years and are much pleased with it. It grows so strong that the stalks look like small corn fodder. The seed is produced on long heads and is larger than common millet seed. The seed makes excellent food for chickens, and as the yield is 40 to 60 bushels per acre it can be profitably grown for the purpose. But its great value is for a forage crop or for ensilage. Very large crops can be raised per acre, nearly double that of common millet. The hay is relished by cows, horses and sheep. Even when allowed to ripen its seed, the hay after the seed is threshed out is readily eaten by stock, there being no waste as in the case of cornstalks. It is very easily grown, harvested and cured, and will be found a great acquisition. Sow in May, broadcast or drill in, 10 to 12 quarts per acre. **Price**—Seed of our own raising, of the genuine variety—By mail, per lb. 25c. By express or freight, peck 80c., bushel \$3.00.

Special prices quoted on larger quantities.

Flower Seeds.

Flowers Raised from Seed.

Some of the most beautiful flowers that grow are raised from seed in the open ground. To get the best results, a careful selection of kinds and varieties is important, as there is a great difference between some of the improved varieties and the older types of the flowers.

From our trials of many varieties of flowers we would make the following suggestions as to the choice of kinds and varieties for outdoor culture:

The flower that blooms the earliest and is probably the most popular and satisfactory to raise is the Sweet Pea. We offer a few of the finest varieties. We prefer to raise the varieties separately, but many people like the mixed varieties as they get more kinds for their money. Either produce beautiful flowers that continue to bloom for months if watered in dry weather.

Asters. - If the seed is started in boxes or hot-beds in March, the plants will bloom early in the summer, but the seed can be sown in the open ground and the plants will flower in the late summer. The "New Branching" is a most graceful variety and flowers profusely. The Comet and Japanese are also most att: active varieties.

Bachelor's Button is a hardy early-flowering plant. Improved varieties, New Double and Centaurea Margarita are worthy of a place in every garden.

Nasturtiums are of such great beauty, both as decorative plants and cut flowers that they should be grown in great abundance. The Lobb's Nasturtiums are the best and earliest to flower.

There is another flower somewhat resembling the nasturtium, but of entirely different habit of growth, that has not had the attention it deserves. This is Salpiglossis. Probably if it had a shorter name it would be better known. It is easily raised and produces constant bloom all summer, and the flowers are of the most beautiful form and colors. Don't forget Salpiglossis when ordering seed. They are raised like asters.

Poppies make a brilliant show of color and add more to the attraction and bright appearance of a garden than almost any other flowers. It is no trouble to raise them.

Another ornamental plant is the new Stella Sunflower. To those who are familiar only with the old tall sunflowers this new dwarf-growing kind with hundreds of small flowers on long stems will be a revelation. To form a low screen along a fence or as a background to

other flowers, there is nothing prettier than a row of Stella Sunflowers.

Cosmos is also a tall growing plant that is very ornamental in the garden and as cut flowers. The earlyflowering variety will flower profusely for a long time from seed sown in the open ground, but the Mammoth-Flowering kind, with the handsomest large flowers, is most successfully raised by sowing the seed in the house or hot-bed early and transplanting to the garden when weather is warm enough, The graceful plants with fine foliage and large, beautifully colored flowers will well repay the trouble spent on them.

A comparatively new flower of great merit is the largeflowering Eschscholtzla, or California Poppy, "Golden West." The plant is of low, spreading growth and the large saucer-shaped, bright yellow flowers cover the plant all summer and even late in the fall after hard frost. Flowers early and is no trouble to raise.

Coreopsis is another flower that is easily raised, and adds greatly to the looks of the garden. The plants are graceful and the flowers of bright shades of yellow and red.

The Climbing Japanese Morning Clory is a great improvement on the old Morning Glory and should become very popular.

There are many other flowers, such as Pansies, Petunias, Hollyhocks, Salvia, Marigolds, etc., which we have not space to mention but which are familiar to all. They are old friends that should not be discarded.

Flowers Raised from Roots and Bulbs.

Some of the most desirable flowers cannot be raised from seed. Of these we offer a select list at the end of the Flower Seed Department. We would cala special attention to the new plant, Rudbeckia, "Colden Clow." The flowers are very handsome and the plants most ornamental and increase in beauty from year to year.

Our Flower Seeds.

Some of our flower seeds are of our own growing but most of them are imported from the most reliable growers in France and Germany. They are the best that money can buy and will give much more satisfactory results than most of the seed sold, which often either fails to grow or produces very inferior flowers.

Flower Seeds at half Price.

Instead of offering a collection of Flower Seeds at reduced prices, we have decided this year to let our customers make up a collection to suit themselves and we will send it at half Price, provided the Flower Seeds ordered amount to at least \$2.00 at our regular rates, not including any special combination of varieties of Asters, Pansies, Sweet Peas, etc., which we offer at reduced rates, or any seed by the pound or ounce. Sweet Peas and Nasturtiums may be included only when ordered in Packets at our regular rates.

This, we think is the most liberal offer made by any seedsman. It may be said that if we are able to sell flower seeds at half price we should reduce our prices one-half. This is not true. We could not sell one or two packets any cheaper than we do. In fact it costs more to enter, fill and mail two or three packets than we make on the order. It costs but little more to pack and mail \$2.00 worth of flower seeds than loc. worth, so we are able to make a great reduction in the price when a considerable number of packets are ordered. What we offer is to send Flower Seeds in packets which at our catalogue prices amount to \$2.00 or more, at Half Price. When ordering please note the exceptions mentioned above. When this offer is taken advantage of, no further discounts will be allowed on that part of the order.

- Giant

ASTERS.

The new and improved varieties of Asters are among our most beautiful and satisfactory flowers, and will be a source of pleasure to all who raise them. Seed can be sown in the open ground in the spring and plants will flower in August.

NEW JAPANESE ASTER.

NEW WHITE BRANCHING ASTERS.

These new Asters grow on long stems that branch out from the plant, producing a very graceful effect and removing the stiffness which is the common fault with Asters. The flowers have narrow petals which are also very graceful in appearance. The plants are very floriferous, being often covered with their beautiful flowers. These Asters are especially useful for cutting and decorating purposes, where their long stems and large handsome flowers produce the most pleasing effects. Pkt. 10c., 3 pkts. 25c.

NEW JAPANESE ASTER.

This new Aster is distinct from all other varieties, the flowers, as shown in our cut, have long, narrow and gracefully curved petals, and are of immense size and of a beautiful shade of pink. The New Japanese is one of the handsomest Asters we have ever grown. Every one should see these Asters to appreciate their beauty. Pkt. 10c., 3 pkts. 25c.

GIANT WHITE COMET ASTER—See Cut.

The White Comet Aster is one of the handsomest flowers grown from seed, but the New Giant White Comet is superior to it in size and beauty. The flowers are often five inches across with beautifully curled and twisted petals, making them look like the finest Japanese Chrysanthemums. Undoubtedly the finest pure white Aster ever introduced and will be found a great addition to any garden. Pkt. 10c., 3 pkts. 25c.

THE BRIDE.

This is a New Giant Comet Aster like the above, but the color is at first nearly white, changing as the flowers open

to a light rose color. A most beautiful variety. Pkt. 10c., 3 pkts. 25c.

CIANT COMET, Mixed Colors-A mixture of all the colors so far obtained. Pkt. 10c., 3 pkts. 25c.

OTHER CHOICE VARIETIES OF ASTERS.

Truffaut's Pæony-flowered Perfection - One of the handsomest of all Asters. The flowers are very large

and double, with incurved petals, producing a perfect ball. Plants grow 20 inches high and are covered with flowers. Our seed is a mixture of the most beautiful colors. Pkt. 10c., 3 pkts. 25c.

VICTORIA—Two feet high. A truly magnificent Aster. A profuse bloomer; vigorous grower; large, beautiful flowers. 3 to 4 inches in diameter; mixed colors. Pkt. 10c., 3 pkts. 2.c.

DWARF CHRYSANTHEMUM - FLOW-ERED—One foot high. Flowers large and exceedingly abundant; mixed colors. Pkt. 8c., 3 pkts. 20c.

Betteridge's Quilled — The newest and best form of quilled Aster. The plants continue to bloom later than any other variety. Pkt. 5c., 3 pkts. 12c.

WASHINGTON—The largest of all Asters. The flowers measure four inches in diameter, and are perfectly double and of fine form. We have a mixture of many beautiful colors. Pkt. 10c., 3 pkts. 25c. The flowers

TRIUMPH—Beautiful dwarf Asters for beds. The plants grow only about eight inches high, and are a perfect mass of large deep scarlet flowers of the nnest form, with incurved petals. Pkt. 10c., 3 pkts. 25c.

The flow-WHITE MICNON—A beautiful white Aster. The flowers are not large, but are very double and are borne in great abundance. Pkt. 10c., 3 pkts. 25c.

NEW ROSE—Two feet high. Flowers large and double resembling a rose; one of the most beautiful Asters. Mixed colors. Pkt. 10c., 3 pkts. 25c.

Mixed colors. Pkt. 10c., 3 pkts. 25c.

Harlequin—About 20 inches high. Mixed colors. A peculiar and beautiful variety. The petals are striped with different colors—red and white, white and blue, etc.—producing a very pleasing effect. Pkt. 10c., 3 pkts. 25c.

CROWN—About twenty inches high. One of the most beautiful Asters. The flowers have a white center, surrounded by a broad margin of blue, red, purple, etc. Flowers large and perfectly double. Pkt. 10c., 3 pkts. 25c.

NINE VARIETIES OF ASTERS MIXED—We will send a mixture of the seed of Victoria, Betteridge. Quilled, New Rose. Harlequin, Washington. Crown, White Mignon, Truffaut's Pæony-flowered Perfection and Dwarf Chrysanthemum-flowered Asters. Pkt. 10c., 3 pkts. 25c.

Chrysanthemum-flowered Asters. Pkt. 10c., 3 pkts. 25c.

GIANT WHITE COMET ASTER-One-half natural size.

ABRONIA.

A beautiful California plant, trailing along the ground and resembling the Verbena. It has fragrant flowers, lilac and rose colored, and continues to bloom all through the summer and autumn.

Abronia Umbellata—Lilac and rose colored; fragrant. Pkt. 5c., 3 pkts. 12c.

AGERATUM.

An annual plant bearing fringe like flowers. Especially useful for bouquets.

Blue-Pkt. 5c. Pure White-Pkt. 5c.

AQUILEGIA—COLUMBINE. DOUBLE HONEYSUCKLE.

A hardy perennial, easy of cultivation. The abundance of snowy flowers early in the season, and their peculiar formation, render this plant well worthy of a place in every garden. Does not flower the first season but will flower early the following summer and last for many years. Fine Double, Mixed Colors—Pkt. 5c., 3 pkts. 1?c.

SWEET ALYSSUM.

A very pretty little plant, covered with pure white, sweet-scented flowers, which are produced all through the summer. Pkt. 5c., 3 pkts. 12c.

AMARANTHUS.

The plant grows four or five feet high, and bears long tassel-like flowers of a deep-red color. Pkt. 5c.

NEW DOUBLE BACHELOR'S BUTTON.

Bachelor's Button or "Corn Flower," has always been a favorite flower; but now that we have this new double variety it should be doubly so. The plants are as vigorous and hardy as the old variety and produce double and semi-double flowers in the greatest profusion through the summer and late in the fall, even after hard frost. Our seed is a mixture of the best colors. Pkt. 5c., 3 pkts. 12c.

NEW DOUBLE BACHELOR'S BUTTON.

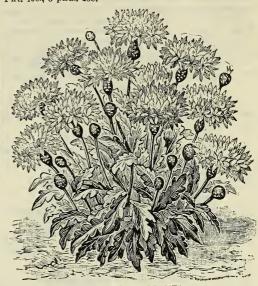

OTHER VARIETIES OF BACHELOR'S BUTTON.

Emperor William—A new variety of a beautiful deepblue color and with large flowers. Pkt. ic., 3 pkts. 12c.
VICTORIA—A new dwarf variety, growing only eight inches high and covered with dark-blue flowers all summer. Very pretty for edges or borders. Pkt. 10c., 3 pkts. 25c.

Mixed Colors—A mixture of the best single varieties. Pkt. 5c., 3 pkts. 12c.

CENTAUREA MARGARITA.

A beautiful new, pure white, sweet scented flower of the Bachelor's Button family. Plants grows about 18 inches high and the flowers are of large size, having long stems and pleasant fragrance. It is a grand flower for cutting or decorative purposes. Pure white, graceful flowers on long stems a e always attractive. The plants should be given rich land and watered in dry weather. Pkt, 10c., 3 pkts. 25c.

CENTAUREA MARGARITA.

BALSAMS.

These charming flowers can easily be grown in the open ground, and will flower abundantly. To get the best results the plants should be thinned out to a foot apart.

IMPROVED DOUBLE CAMELLIA-FLOWERED BALSAM.

Improved Double Camellia-Flowered Balsams.

These are the finest Balsams in existence. The flowers are very large and perfectly double, and grow so thickly on the stems that the plant presents a mass of bloom from

top to bottom. Our seed is of the very finest strain producing flowers of the best form and most beautiful colors. Mixed colors. Pkt. 10c., 3 pkts. 25c.

Dwarf Double White Balsams—Beautiful double, pure white flowers. Pkt. 10c., 3 pkts. 25c.

Double Spotted—Large double flowers spotted with various colors. Very pretty. Pkt. 8c., 3 pkts. 15c.

Rose Flowered—A most beautiful class, the flowers resembling small roses, and are perfectly double and of charming colors. Pkt. 8c , 3 pkts. 15c.

Fine Double, Mixed—A mixture of the finest rose-flowered and spotted varieties. Pkt. 5c., 3 pkts. 12c. The above five varieties mixed—Pkt. 10c., 3 pkts. 25c.

BALLOON VINE.

A rapid growing vine with white flowers, followed by seed vessels resembling a small balloon. Sow seed in May. Pkt. 5c.

BARTONIA.

A very hardy plant, bearing large bright-yellow flowers in great profusion throughout the summer and autumn, Very showy and attractive.

Dwarf Colden Bartonia-Pkt. 5c., 3 pkts. 12c.

CALENDULA.

A very charming flower, belonging to the Marigold family, and cultivated in the same way.

Large Double-Flowered Meteor-A beautiful variety, with large, golden-yellow flowers, with each petal

striped with orange. The flowers are perfectly double and often three inches in diameter. Pkt. 5c., 3 pkts. 12c.

CANNAS.

A superb plant for decorating lawns and gardens. Their large, glossy leaves and bright colored flowers render them pre-eminent for this purpose. They can easily be grown from seed and flower the first year.

Canna Seed—The handsomest named varieties of Cannas are grown from bulbs only, but some very nice ones can be raised from seed. We offer seed of the large-flowering French Cannas, which are by far the finest Cannas grown. Oz. 25c., pkt. 10c.

Canna Bulbs-See Flowering Plants and Bulbs, page 53.

CONVOLVULUS, or Morning Glory.

New Japanese Morning Clory.

The Japanese have made wonderful improvements in the Morning Glory. The New Japanese varieties are of great size, the flowers being twice as large as the common Morning Glory, and the colors and markings are of remarkable beauty. The foliage is also very ornamental, being variegated, striped and marked with different shades of green and white. The vines grow with great rapidity and flower early in the season and continue ally

DUNNETT'S NEW DOUBLE WHITE CHRYSANTHEMUM.

NEW JAPANESE MORNING GLORY.

through the summer, the vines growing to a height of fifteen or twenty feet. We offer seed of the most attractive varieties mixed. Pkt. 10c., oz. 25c.

Convolvulus Major - The old climbing Morning Glory; mixed colors. Pkt. 5c, 3 pkts. 12c.

Striped Rose and Mixed-A mixture of the finest striped rose and mixed colored Morning Glories. Pkt. 5c., 3 pkts. 12c.

Convolvulus Minor—Vines are of dwarf habit, growing only about a foot high; flowers good sized and abundant. Pkt. 5c, 3 pkts. 12c.

CHRYSANTHEMUMS.

A handsome, hardy annual of vigorous growth, clean foliage and beautiful flowers. A free bloomer, and continuing in flower very late in the autumn. Cultivation similar to As ers. These annual varieties must not, however, be confounded with the perennial kinds so largely grown by florists.

Dunnett's New Double White—The flowers measure about two inches in diameter, and a large percentage of them are perfectly double. Pkt. 5c., 3 pkts. 12c.

Coron, Double White Dwarf-Very popular; almost perfectly double, and continues in bloom very late in the season. We picked a quantity of these charming daisy-like flowers November 10th. Pkt. 5c., 3 pkts. 12c.

Chrysanthemum, Tricolor—Yellow and white single flowers. Plant grows about two feet high. Pkt. 5c., 3 pkts. 12c.

Dunnett's New Double Yellow—Similar to the above except in color, which is bright yellow. Pkt. 5c., 3 pkts. 12c.

CASTOR OIL BEAN-Ricinus.

A very effective plant for lawn decoration or screens. Plant the seed when the soil is warm where the plants are to grow. It is well to put two or three seeds in a place and thin to one good plant.

and gorgeous variety of Castor Oil Bean that we have ever seen. The plants grow rapidly, and the dark, reddish bronze leaves, with large red veins, present a most luxuriant and striking appearance. When young the leaves and stems are reddish brown, while the main stem is a lustrous black, producing a gorgeous effect. Do not fail to sow it. Pkt. 5c., oz. 25c.

Sanguineus—A fine variety with dark red foliage. Pkt. 5c., 3 pkts. 13c.

COBOEA SCANDENS.

A very rapid growing climber. From seed planted in the spring the vines will often grow thirty feet before fall, producing large flowers of deep violet blue color.

Fresh Seed-Pkt. 10c., 3 pkts. 25c.

COCKSCOMB—Celosia.

Pyramidalis Plumosa—These Plumed Cockscombs are very handsome, showy and attractive plants, growing about two feet high and covered with a mass of the most gorgeous and brilliantly colored plume-like flowers. Mixed colors, crimson and golden. Pkt. 8c., 3 pkts. 15c.

Clasgow Prize—Large, compact combs of a brilliant crimson color. Dwarf plants. Pkt. 10c.

Dwarf Mixed—A mixture of the dwarf crested varieties. Pkt. 8c., 3 pkts, 15c.

CANDYTUFT.

Candytuft is a very hardy plant and can be sown as soon as the frost is out of the ground. It is a universal favorite, and is used for beds, borders, edging, pots, etc.

Dunnett's Crimson—A beautiful red variety. Pkt. 5c., 3 pkts. 12c.

white ROCKET—A magnificent variety, with large spikes of pure white flowers. This is so great an improvement on the ordinary Candytuft that it would hardly be recognized as the same flower. Pkt. 5c., 3 pkts. 15c.

Sweet Scented, Pure White— The well-known sweet-scented Candytuft. Pkt. 5c., 3 pkts. 12c., oz. 35c.

Mixed Colors — A mixture of the best kinds and colors. Pkt. 5c., 3 pkts. 10c., oz. 25c.

WHITE ROCKET.

CLARKIA.

Beautiful plants, blooming profusely; easily grown and exceedingly attractive. About 18 inches high. The seed can be sown in spring or fall, like Candytuft.

Clarkia Elegans, Double Mixed Colors — Pkt. 5c., 3 pkts. 12c.

COREOPSIS.

One of the most charming and attractive of annual flowers, easily grown and producing an abundance of flowers all through the summer and autumn. The plants are about two feet high, and should stand not less than one foot apart. Sow the seed in the open ground in the spring.

COLDEN KINC—A new dwarf variety, growing only 8 and 10 inches high, and covered with flowers of the richest maroon bordered with yellow. A very useful variety for edges and borders, where it will add greatly to the beauty of a garden. Pkt. 5c., 3 pkts. 12c.

flower. The plants grow about 18 inches high, and are covered with golden-yellow flowers with maroon centers. A row or bed of these plants, with their long, graceful stems and bright foliage, in contrast with the gorgeous color of the flowers, present a most pleasing sight. The plants continue to flower through the summer and fall. Pkt. 5c., 3 pkts. 12c.

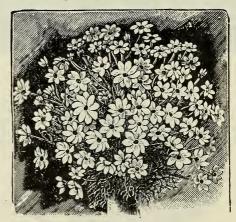

GOLDEN WAVE COREOPSIS.

Bi-Color, Dwarf Mixed—Flowers a little smaller than the above, and of every shade of rich maroon, yellow and brown. Very handsome. Pkt. 5c., 3 pkts. 12c.

COSMOS.

One of the most attractive and useful annual flowers, now becoming very popular. The plant grows three to five feet high, with long, graceful stems and fine leaves. The flowers resemble single dahlias, but not quite so large, and are very pretty and attractive for table or house decoration. The plants will endure a hard frost, and will flower until late in the fall. The plants can be taken up and potted, and will grow and flower in the house for a long time.

NEW EARLY-FLOWERING COSMOS.

Cosmos, White-Large white flowers, fine for cutting and decorating. Pkt. 10c., 3 pkts. 25c.

Mixed Colors—A mixture of all the best colors so far produced. Pkt. &c., 3 pkts. 15c.

MAMMOTH FLOWERING COSMOS—The flowers of this improved Cosmos grow very large, often measuring three inches in diameter, and are of the most delicate colors, shading from pure white to deep red and purple. The plants grow from four to five feet high and the flowers have long graceful stems and are most attractive and beautiful. In order to get them to flower early in the fall in this latitude the seed should be sown in pots in March, and the plants set out in the open ground in May. They will well repay all the trouble spent on them. Pkt. 10c., 3 pkts. 25c.

NEW EARLY FLOWERING COSMOS-

This is an early flowering strain of Cosmos, with flowers as large as those of the old varieties, and will flower a month earlier. Seed sown in the open ground in May will produce flowering plants in August which will continue flowering all through the fall. A very attractive and useful flower for cutting or decorating gardens and lawns. Mixed colors, pkt. 10c., 3 pkts. 20c.

NEW DWARF YELLOW COSMOS—This is a new and entirely distinct variety of Cosmos. The plants grow only about a foot high, and produce a great profusion of small, bright yellow flowers, that are very pretty and attractive. Pkt. 5c., 3 pkts. 12c.

New Marguerite Carnations.

These new Carnations are really a great addition to outdoor flowers. Hitherto Carnations could only be grown in hot-houses, but now, since we have the New Marguerite Carnations, they can be grown successfully in the open ground, and will flower within four months from the time of sowing the seed. The flowers are perfectly double, of good size, and beautifully fringed; and this, combined

with their charming and varied colors and delicious fragrance, place them among the most desirable of all outdoor flowers. The plants are dwarf and compact, and have stiff stems that hold up the flowers well without support. The seed should be sown early in the spring, in boxes in the house, and the plants set out in the open ground as soon as warm weather comes. The plants can be taken up in the fall and will flower a long time in the house. Pkt 10c., 3 pkts, 25c.

New Clant-Improved, large flowering strain with very handsome flowers of beautiful form. Pkt. 15c., 2 pkts. 25c.

DIANTHUS, or PINKS.

SINGLE DIANTHUS.

Very popular and effective flowers, easily raised, and afford a constant supply of bright, handsome flowers during the summer and autumn.

NEW MARGUERITE CARNATIONS.

NEW SINGLE DIANTHUS.

We think everybody will appreciate these new varieties of Pinks, which are one of the most popular and attractive of our hardy flowers. The great charm of the single varieties lies in their exquisite coloring; a bed or row of them is a perfect blaze of beauty. They can be sown in the open ground in the spring and will flower the first season.

Crimson Belle—A charming single variety with large flowers of a beautiful, lustrous crimson. Pkt. 5c.

The Bride—Flower single, large and beautifully fringed. The color is white on the edge with bright red shading to purple at the center, producing a very pleasing effect. Pkt. 5c.

Snowflake—A pure white, single, fringed variety. Very beautiful. Pkt. 5c.

Eastern Queen—Very large, single flowers, beautifully shaded with rose and white. One of the most showy and attractive varieties. Pkt. 5c.

Four Varieties Mixed—We will send a mixture of the above four varieties for 10c. per packet.

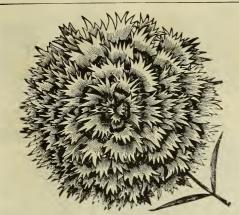

One packet each of the above four new varieties of ${\it Dianthus}$ for 15c.

DOUBLE VARIETIES.

Laciniatus—This is a beautiful double fringed variety. The flowers are very large and of many beautiful colors. Pkt. 5c., 3 pkts. 12c.

Heddewigii, Double Japan Pink — Remarkably large and double, and of brilliant colors. The flowers resemble Carnations. The plants are hardy and will flower the next year after sowing as well as the first. Pkt. 5c., 3 pkts. 17c.

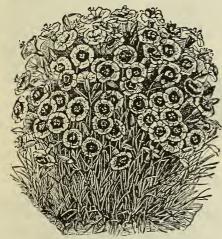

Chinensis Double Chinese Pink—Flowers very double and produced in clusters. Pkt. 5c., 3 pkts. 12c.

DIANTHUS LACINIATUS.

NEW CYCLOPS PINK.

A hardy, ever-blooming and fragrant Pink, coming true from seed. The rose and crimson single flowers, six inches in circumference, have a delicate, clove-like, fragrance. They are borne in great profusion from May until frost, after the plant is established, and if the seed is sown early in boxes in the house or hot-bed, will give abundance of flowers the first season. The plants grow from twelve to fifteen inches high, and are very valuable for bedding as well as cutting, for when massed together their mass of bloom produces a most brilliant effect. In addition the plants are perennial, flowering with undiminished splendor for several years. We advise all our customers to try this variety. Pkt. 10c., 3 pkts. 25c.

NEW CYCLOPS PINK.

DAHLIAS.

Dahlias, especially the single varieties, can easily be raised from seed by sowing the seed in a box or pot in February or March and transplant into other pots as the plants commence to crowd. Set in the open ground when warm and support with stakes. The plants will flower the first year, and the roots can be saved and will flower much earlier the second year.

New Single Varieties-These are becoming a very popular and fashionable flower. Our seed is a mixture .of the finest single varieties with largest flowers and best colors. Pkt. 5c., 3 pkts. 12c.

Double Dahlias-Seed saved from the largest and finest Double Dahlias, and will produce nearly all fine double flowers. Pkt. 10c., 3 pkts. 25c.

ESCHSCHOLTZIA, or California Poppy.

COLDEN WEST-This new variety of Eschscholtzia is a most ornamental plant in a garden and useful for cut flowers. The plant grows low, spreading on the ground for two feet or more. The flowers, which are bright yellow, stand above the silvery green foliage in great numbers. A bed of these flowers is a pleasing sight. The plants are very hardy and are not injured by early frosts, but continue to bloom until cold weather. Our cut, from a photograph, shows the shape of the flowers. Seed of our own raising. Pkt. 10c., 3 pkts. 20c.

ESCHSCHOLTZIA, or California Poppy.

FORGET-ME-NOT—Myosotis.

A half-hardy perennial, easily grown from seed. It does best in a moist situation.

Myosotis Palustris-The true Forget-Me-Not. Pkt. 10c., 3 pkts. 25c.

Myosotis Sylvatica-Large, beautiful flowers. Pkt. 5c., 3 pkts. 12c.

FOXGLOVE—Digitalis.

Very easily grown, and the long spikes of flowers are stately and beautiful. Sow the seed in the spring and thin out to a foot apart. The plants will last for years without any protection. Pkt. 5c.

GOURDS.

Cultivation similar to squash. The vines can be allowed to run on the ground, but Gourds are usually planted where the vines can run over a fence, arbor or old tree. They are excellent climbers, and the fruit has such a variety of forms and colors that a collection of Gourds is exceedingly interesting and attractive.

Dipper Courd-The fruit at one end is long and slim, and bulges at the other end, and can be used for dippers. Pkt. 5c., 3 pkts. 12c.

Japanese Nest Egg—Fruit white and resembling an egg. Does not crack, and is not injured by ordinary heat and cold. A vigorous grower and a decidedly ornamental climber. Pkt. 5c., 3 pkts. 12c.

ornamental climber. Pkt. 5c., 3 pkts. 12c.

FINE MIXED COURDS—A mixture of a large number of the best sorts, including the best climbers. Pkt. 5c.,

3 pkts. 12c.

MIXED SMALL SORTS—A fine mixture of a large number of small ornamental sorts just imported from Germany. Pkt. 5c., 3 pkts. 12c.

GAILLARDIAS.

The Gaillardias are not only strikingly beautiful but are very easily cultivated. The flowers of the single varieties measure from two to three inches in diameter, and are of every shade of yellow and red blended together in the most beautiful manner. Some flowers are yellow and red, edged with white; others are pure yellow, white and red, etc. The plants grow low and spreading, and the flowers are borne on long stems. The seed can be sown in the open ground, and the plants will flower in the late summer and all through the fall, even after a frost.

Single Gaillardias—Mixed colors. A mixture of all the most beautiful colored single varieties. (See cut.) Pkt. 5c., 3 pkts. 12c.

Double Calliardias—Entirely different from the single varieties, the flowers being somewhat smaller and compact. Very attractive and pretty. Pkt. 5c., 3 pkts. 12c.

HOLLYHOCKS.

DOUBLE HOLLYHOCKS.

CHARTIER'S SUPERB HOLLYHOCKS.

A new and magnificent strain of Hollyhocks. The flowers are of the largest size, perfectly double, and grow close together on the stem, forming a mass of the most beautiful flowers, equal to camellias. These are undoubtedly the finest Hollyhocks in existence. Pkt. 10c., 3 pkts. 25c.

Fine Double-Mixed colors. Pkt. 8c., 3 pkts. 20c.

MARIGOLDS.

These hardy, popular and beautiful flowers have been wonderfully improved. They are very easily grown, and are among our most attractive and satisfactory annual flowers. The plants should be thinned out to at least a foot apart for the dwarf and two feet for the tall varieties. The dwarf varieties flower much earlier than the tall.

"LEGION OF HONOR"—This new dwarf variety has flowers of the brightest yellow and marcon, and makes a beautiful show in a border or bed, and are also very pretty as cut flowers. (See illustration). Pkt. 5c., 3 pkts. 12c.

Cold Striped—A double French dwarf variety of recent introduction. Plants grow one foot high and are covered with bright colored double flowers in the greatest profusion. The petals are a beautiful red-brown, margined with bright yellow, producing a very pleasing effect. Pkf. 5c. 3 pkts. 19c.

effect. Pkt. 5c., 3 pkts. 12c.

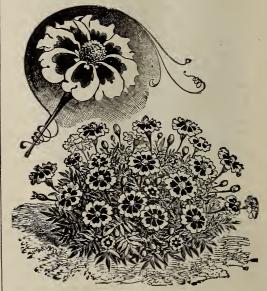

Double African Quilled—One of the largest and best varieties. Plants grow about two feet high. Flowers

SINGLE GAILLARDIAS.

very large, measuring from 3 to 4 inches in diameter, perfectly double, and with quilled petals. Two distinct varieties, yellow and orange, mixed. Pkt. 5c., 3 pkts. 12c.

Double French Dwarf—Plants grow about one foot high. Flowers orange brown and yellow, mixed. Pkt. 5c., 3 pkts. 12c.

"LEGION OF HONOR" MARIGOLD.

MIGNONETTE.

ALLEN'S DEFIANCE—This new variety has magnificent long spikes of flowers of very rich fragrance. The spikes of flowers under favorable circumstances sometimes grow over a foot long and will last a long time after cutting. Pkt. 10c., ½ oz., 20c., oz., 70c.

MACHET—This is the largest and finest Mignonette. The plants are of a dwarf habit and produce an abundance of the largest spikes of flowers we have ever seen on any Mignonette, being three times as large as the common kind, and continues in flower much longer. We highly recommend it for house or outdoor culture. Its fragrance is delicious. Pkt. 5c., oz. 40c.

Golden Queen Mignonette—Flowers of a golden yellow hue, large and compact. A very beautiful variety. Pkt.

5c., 3 pkts. 12c.

Miles' Hybrid Spiral—Very long spikes of flowers; an excellent variety. Pkt. 5c., oz. 40e.

Sweet Mignonette-Very fragrant; largely grown for bees. ½ lb. 40c., oz. 15c., pkt. 5c.

NASTURTIUMS.

There is no flower more easily raised than Nasturtiums, and they are so graceful and of such beautiful colors that they stand at the head of all annual flowers in merit and popularity. They are beautiful in beds and borders, and also are largely grown in hanging baskets and boxes outside of windows and on balconies, and for training on trellises.

LOBB'S NASTURTIUMS.

LOBB'S IMPROVED NASTURTIUMS.

These are the finest Nasturtiums in cultivation. The vines do not grow as long and rank as the common tall Nasturtium, which often entirely hides the flowers, but are covered with a mass of the most brilliant colored flowers of the largest size and most graceful form. A row or bed of these Nasturtiums is unsurpassed for beauty and attractiveness, and will be a constant source of pleasure and object of admiration. They are decidedly the finest Nasturtiums for growing in boxes or baskets as well as for outdoor culture.

Lobb's Nasturtium, Mixed—Including all the finest varieties and colors, from very dark red to the lightest

yellow. Pkt. 5c., oz. 12c., 1/4 lb. 35c.

Tail Nasturtiums—Very vigorous vines, growing 5 to 8 feet long; flowers of the largest size and beautiful colors. Pkt. 5c., oz. 12c., ¼ lb. 25c., lb. 80c.

Dwarf Nasturtium, Tom Thumb-Plants only 18 inches high; flowers of good size and brilliant colors. Pkt. 5c., oz. 15c., ½ lb. 40c.

Empress of India—A very dwarf variety with darkpurple leaves and deep-scarlet flowers. Pkt. 8c., oz. 20c.

NICOTIANA.

This is a remarkably handsome hardy annual flower. The flowers are very long, tubulous, pure white and deliciously fragrant. The plant is a strong grower, with large leaves, and should be given plenty of room, say a foot apart. The plant and flowers are very ornamental and should be in every garden. Pkt. 5c.

PETUNIAS.

Petunias are particularly useful for beds and masses, where their bright, rich and varied colorings produce a brilliant effect on lawns and gardens.

NEW SINGLE FRINGED PETUNIAS.

New Single Fringed—The finest of all single-flowering Petunias. The flowers are of the largest size and beautifully fringed around the edges, and are of the most delicate and charming colors, Pkt. 20c.

Double Flowering Fringed—The largest and finest of all Petunias, but very difficult to raise. The flowers are very large and beautiful, about half of them being double, fringed, and of charming coloring. The seed is very small and difficult to germinate, and as it is very expensive, great care should be taken not to cover it too deeply or let it dry out. Pkt., containing not less than 75 seeds, 25c.

GRANDIFLORA—Magnificent large single flowers, unsurpassed in size and beauty of form and coloring. They are worthy of special care and attention and will repay for the trouble spent on them. Pkt. 15c., 2 pkts. 25c.

Note—The above kinds should be sown in pots or boxes, and the young plants transplanted as soon as large enough.

Fine Mixed Sorts—A mixture of the most brilliant-colored, small-flowering single Petunias. Well suited for outdoor culture. Pkt. 5c., 3 pkts. 12c.

PORTULACA.

Very pretty and attractive flowers for beds and borders, and easily raised from seed sown in the open ground in the spring. Sow in a sunny spot and you will soon have a brilliant show of flowers.

pouble Rose-Flowered, Mixed Colors—The finest of all Portulacas. The flowers are double and resemble a perfect rose. Our seed is the very finest obtainable, and will produce a large percentage of beautiful double flowers of many charming colors. Pkt. 10c., 3 pkts. 25c.

Finest Mixed Varieties—A mixture of the largest and most brilliantly colored single varieties. Pkt. 5c., 8

pkts. 12c.

To get early flowering plants, seed

PANSIES.

should be sown in boxes in March.

These are the finest pansies existence. The flowers in existence. are of the largest size and most beautifully marked and colored. This strain comprises a great variety of the richest and most striking colors, and most beautifully marked and striped varieties, which are so much admired by all lovers of this flower, and is unsurpassed by any pansies in cultivation, no matter under what name they are sold. Pkt. 15c., 2 pkts. 25c., ¼ oz. \$1.75.

Bugnot's Brown Varieties-This mixture is composed exclusively of the brown shades of Bugnot's Superb Pansies,

These are the largest pansies grown. The flowers are of beaut'ful colors and good form, which combined with their enormous size and vigorous and compact growth. places them among the finest of all pansies. Pkt. 10c., 3 pkts. 25c., 1/4 oz. 50c.

STRIPED and MOTTLED PANSIES.

This class comprises some of the most interesting and attractive pansies, the flowers being striped and blotched with a great variety of colors, making them very interesting and beautiful. Pkt. 10c., 3 pkts. 25c., 1/4 oz. 35c.

which are always so much desired. They are very handsome Pansies and the colors are quite novel. Pkt. 15c.

BUGNOT'S SUPERB PANSIES.

We will send one packet each of Bugnot's, Trimardeau and Striped or Mottled Pansies for 25 cts.

A MIXTURE OF MAGNIFICENT PANSIES.

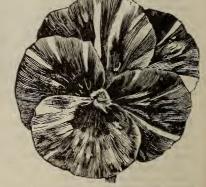

The three largest, newest and most beautiful strains of Pansies are Bugnot's Superb, Odier or Clant Stained Pansies, and Cassiers Clant Blotched Pansies. These three embrace all the newest and most attractive colors and markings yet attained in Pansies. We offer a mixture of these three superb strains, which is absolutely unsurpassed for novelty and variety. Pkt. 15c., 2 pkts. 25c., 1/4 oz. \$1.25.

NEW GOLDEN YELLOW PANSY.

This is a most beautiful and novel Pansy, distinct from all others. It is of the Odier or five-spotted type, and of a rich golden yellow. Everyone should have a few plants of this new pansy. Pkt. 15c.

New English Seedling Pansies-Among these Pansies are many of the most popular colors and markings. They are often called "Faced Pansies." Plant of strong, compact growth. Pkt. 10c., 3 pkts. 20c.,

New German Pansies-A mixture of fine large-flowering varieties, comprising many odd and beautiful colors. Pkt 10c., 3 pkts. 25c.

STRIPED AND MOTTLED PANSY.

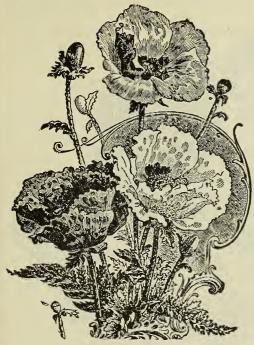

Mixed Colors-A good mixture of many beautifully colored pansies. Pkt. 5c., 3 pkts. 12c.

POPPIES.

Poppies are so easily grown and present so gorgeous a display of beautiful colors and graceful flowers that every one should have them in abundance.

ICELAND POPPIES (Perennial).

The Iceland Poppies differ from other varieties in being hardy perennials and yet flowering the first year from seed sown in the spring. After once started they will last for many years and flower constantly from June until October. The flowers are of beautiful colors and grow on long, graceful stems and have a delicate fragrance. The flowers will last a long time after being picked. Mixed colors. Pkt. 10c., 3 pkts. 25c.

ICELAND POPPIES.

CARDINAL POPPY (New Hybrids).

"The Cardinal" is a magnificent, large double Poppy, of a glowing scarlet color, but we are now able to offer some new colors, ranging from pink to deep red. The plants are of dwarf or compact growth, and produce their enormous, ball-like flowers in great profusion and continue in flower an unusually long time. The seed we offer is of our own growing. Pkt. 5c., 3 pkts. 12c.

FAIRY BLUSH—This beautiful Poppy is of the largest size and perfectly double, the color is white, with the end of each petal tipped with rose color, giving the flowers a very delicate appearance. Pkt. 5c., 3 pkts. 12c.

MIKADO—This Poppy much resembles the Fairy Blush, except that the petals are more deeply fringed and curled much like a Japanese Chrysanthemum. Color white, tipped with crimson. Pkt. 5c., 3 pkts. 12c.

Shirley Poppies—These are the most delicately colored and graceful of all poppies. The flowers are single and are produced on long slender stems, but their great beauty lies in the exquisite coloring of the flowers, which are of all shades of delicate pink rose color, shading in a single flower from pure white to deep rose or crimson, which must be seen to be appreciated. Pkt. 5c., 3 pkts. 12c.

DOUBLE RANUNCULUS-FLOWERED POPPY.

DOUBLE RANUNCULUS-FLOWERED, POPPY.

Our cut gives a better description of these Poppies than we can in words, but the colors which make the Poppy such an attractive flower must be seen to be appreciated. Do not fail to sow them. Pkt. 5c., 3 pkts 12c.

NEW TULIP POPPY.

The flowers much resemble a bright scarlet tulip and are very unique and attractive. The flowers are borne on long stems and protrude well above the foliage. A bed or mass of these poppies presents a most gorgeous blaze of color and will be an ornament to any garden. If sown early the plants flower all through the summer and autumn. Pkt. 10c., 3 pkts. 25c.

Double Carnation—Immense globular flowers borne on long stems. The flowers are so double that they are as round as a ball, and are of many striking colors. Pkt. 5c., 3 pkts. 12c.

Umbrosium—A single flowering deep scarlet poppy with a black spot at the base of each petal. Will last longer after being picked than any other poppy. Pkt. 5c., 3 pkts. 12c.

PHLOX DRUMMONDI.

Phlox makes a magnificent show in beds and masses, where their brilliant and varied colors produce a gorgeous effect. Sow seed in the open ground in the spring.

STAR OF QUEDLINGBURGH—This new and interesting variety is distinct from all others in having the center of each petal elongated, producing a very novel and pleasing effect. Mixed colors. Pkt. 10c., 3 pkts. 25c.

GRANDIFLORA PHLOX.

The Improved "Grandiflora" Phlox have flowers nearly twice as large as the old kinds and produce a great profusion of bloom,

Brilliant Scarlet—Flowers large and of an intensely brilliant scarlet color. Very handsome. Pkt. 5c.

Pure White-Large, clear white flowers. Pkt. 5c., 3 pkts. 12c.

Mixed Colors—A great variety of the most brilliant colors and beautiful markings. Pkt. 5c., 3 pkts. 12c., ½ oz. 25c.

PRIMROSE.

The Primrose is a hardy perennial, one of the most common and popular flowers in England.

English Primrose—Plant grows about a foot high and is covered with bright yellow flowers. Pkt. 5c.

Forbes Primrose—An early flowering, hardy primrose that will flower the first year from seed sown in the spring. Flowers rosy lilac and produced in great abundance. A new and beautiful variety. Pkt. 10c.

SWEET PEAS.

No one should think of being without a good supply of these beautiful, sweet-scented flowers. They are easily raised and will give more pleasure and enjoyment for little trouble than any other flower.

Our Sweet Pea seed is of the very finest quality, far superior to the ordinary cheap seed usually sold. There are no flowers more attractive or beautiful than the new large-flowering varieties of Sweet Peas we offer.

THE ADMIRATION OF ALL.--When I bought seed from your farm a few years ago, my Sweet Peas were the admiration of all who saw them. I wish to do as well again, so come back to you.

A. W. SMITH, Ballersea Farm, Va., Dec. 5th, 1899.

THE BEST NEW KINDS.

Among the hundreds of varieties of Sweet Peas we think the following are the best as grown on our trial grounds under ordinary culture:

corceous—(New)—One of the most brilliantly colored and attractive varieties we have ever grown. The flowers are of the largest size, expanded form, and the color is orangesalmon veined with darker shades. They are beauties. Pkt. 10c., oz. 20c., ¼ lb. 40c.

Pft. 10c., oz. 20c., ¼ lb. 40c.

EARLIEST OF ALL—(New)—

This new pink-and-white proved in our trial grounds to be a week or ten days earlier than even the extra early Blanche Ferry which has been considered the earliest. The flowers are of the same color and form as the Blanche Ferry but the vines only grow about two feet high. Pkt. 10c., oz. 15c., ¼ lb. 40c.

NEW COUNTESS—The "Countess of Radnor" was the first lavender Sweet Pea but the color was not pure and it faded badly. The NewCountess is a pure lavender and holds its color well. It is one of the most beautiful varieties, especially when buuched by itself. Pkt. 5c., oz. 10c., 1/4 lb. 25c., lb. 75c.

AURORA-Very large flowers, White striped with bright orange red; very showy and handsome. Pkt. 5c, oz. 10c., ½ 1b. 30c.

RAMONA — One of the most beautiful of the new Sweet Peas. Flower very large and of the most delicate coloring, being creamy white diffused with light pink lines. Pkt. 5c., oz. 10c., ½ 1b. 20c., 1b. 60c.

KATHERINE TRACY - Soft pink-This is a most attractive

variety. The flowers are of large size, expanded form, and of a most beautiful shade of soft carmine pink. Pkt. 5c., oz. 10c., 1/4 lb. 20c., 1b. 65c.

DOROTHY TENNANT—Rose Mauve—A soft and beautiful pinkish lavender. Flowers large and expanded. Being of one color it is very attractive when bunched by itself. Pkt. 5c., oz. 10c., 1/4 lb. 20c., lb. 65c.

BLANCHE BURPEE—White—This is the largest and finest pure white sweet pea. Flowers early and profusely. Pkt. 5c., oz. 10c., ½ 1b. 25c., 1b. 75c,

BOREATTON—Deep Maroon—The handsomest dark colored sweet pea. Flowers large and expanded—very distinct and beautiful. Pkt. 5c., oz. 10c., ¼ lb. 25c., lb. 75c.

BLANCHE FERRY—Pink and White—With the exception of the new "Earliest of All," this is the earliest and most prolific sweet pea. The flowers are large and produced in such profusion that the vines are covered with them before other varieties have commenced to show a bloom. Pkt. 5c., oz. 10c., ¼ 1b. 25c., 1b. 70c.

SCARLET INVINCIBLE - Brilliant scarlet flowers. One of the most attractive varieties, flowering very profusely with three or four flowers on a stem. Pkt. 5c. oz. 10c., 1/4 lb. 20c., lb. 60c.

Eckford's New Varieties Mixed-This mixture includes the finest new varieties produced by Mr. Henry Eckford, of England, who has done more to improve the sweet pea than any other man living. The flowers are of large size and of a great variety of colors and markings. Very much superior to ordinary "mixed" Sweet peas. Pkt. 5c., oz. 10c., 1/4 lb. 20c., lb. 50c.

Mixed Colors-A mixture of many different colors and varieties. Pkt. 5c., oz. 10c., 1/4 lb. 15c., lb. 35c., 2 lbs. 65c. New Dwarf Sweet Pea-A dwarf Sweet Pea that is no more trouble to raise than Marigolds or Poppies certainly will be welcomed by every lover of this charm-

ing flower. The plants grow only 6 or 8 inches high and produce flowers as large as those of the tall growing kinds. They are very pretty and ornamental plants.

Cupid-Pure white flowers. Pkt. 10c., oz. 20c., 1/4 lb. 35c. "Pink Cupid" (New) - Flowers pink and white like Blanche Ferry." Pkt. 10c., oz. 25c.

special Offer—10 Best New Sweet Peas at Half Price. The following are the best new varieties: Corgeous, Earliest of All, Ra-

mona, Katherine Tracy, New Countess, Aurora, Dorothy Tennant, Blanche Burpee, Blanche Ferry, Scarlet Invincible.

We will send One Packet of each of the above varieties for 30c. Or one ounce of each kind for 60c.

An ounce of each of these varieties will make a remarkably beautiful collection of sweet peas, with enough of each to keep the different colors separate or to combine them in the most effective way.

SUNFLOWER.

Sunflowers make very ornamental screens and the seed is useful for poultry food, for which it is often grown in large quantities.

New Ever-Blooming Sunflower, "Stella."

This new single Sunflower makes a very bright, attractive and ornamental plant. The flowers are 21/4 to 3 inches across and are produced in great profusion on long stems which make them excellent for cutting. The plants grow 3 or 4 feet high, and the bright yellow flowers with black center make them exceedingly ornamental. Sown in May they commence flowering in July and continue all summer and fall. No trouble at all to raise. Pkt. 10c., oz. 30c.

Texas Silver Queen-A new variety with very attractive silvery foliage. The plant grows 4 to 5 feet high, with numerous branches forming a bush dotted from top to bottom with small sized bright yellow flowers which are very pretty in contrast with the silvery foliage. If large plants are desired early in the summer, sow the seed in boxes and transplant to the open ground when ready. Pkt. 10c., 3 pkts. 25c.

Double California-The finest double Sunflower. Plant grows 5 or 6 feet high, and the flowers are large, deep yellow and very double. Pkt. 5c., 3 pkts. 12c., oz. 40c.

Mammoth Russian - Very large sized flowers, bearing an abundance of seed. Pkt. 5c., oz. 10c., 1/4 lb. 15c., lb. 50c.

SALVIA.

A very ornamental plant, growing about two feet high, and covered with long spikes of brilliantly colored flowers. Very attractive on lawns and borders and useful for cut flowers. Seed should be sown in March.

Salvia Splendens (Scarlet Sage)-Brilliant scarlet flowers borne on long spikes, that literally cover the plant. The finest variety and one of the most ornamental plants in cultivation. Pkt. 5c., 3 pkts. 12c.

Salvia Patens-The flowers of a rich, intense blue. The plant is not so vigorous or compact in growth as the Splendens. Pkt. 15c., 3 pkts. 35c.

SANVITALIA.

A very pretty bright yellow flower growing on a half creeping plant in the greatest abundance. The flowers resemble a double daisy, and are bright, attractive and

"STELLA" SUNFLOWER.

so easily grown that no flower garden should be without them. Cultivate like Phlox.

Sanvitalia Procumbens, fl. pl.—The finest double flowers. Pkt. 5c., 3 pkts. 12c.

SALPIGLOSSIS.

A very graceful orchid-like flower, growing about two or three feet high, with large bell-shaped flowers. The new and large flowering varieties have flowers measuring three inches in diameter, and of the most beautiful colors. The combinations of shades of color and the beautiful markings on the flowers are truly wonderful. Cultivation same as Aster.

Grandiflora, Large Flowering-Mixed colors. Flowers large, beautifully colored and marked. In their coloring and general appearance they much resemble orchids. Seed of our own growing. Pkt. 8c., 3 pkts. 20c.

SWEET WILLIAM—(Dianthus Barbatus)

A universally admired perennial flower that when once started will last for years. Sow the seed in the open ground in the spring or fall.

Perfection-Extra large flowers of many beautiful colors and markings. Pkt. 5c., 3 pkts. 12c.

TEN WEEKS STOCK.

A very popular flower and easily raised. The plants grow about a foot high and produce the flowers in clusters on the stems. Culture the same as Asters.

New Large Flowering Dwarf-Flowers of the largest size and perfectly double, and of many beautiful colors and delicate fragrance. The finest of all stocks. Pkt. 10c., 3 pkts. 25c.

English Stock-Mixed colors. Pkt. 5c., 3 pkts. 12c.

VERBENA.

This beautiful flower can easily be raised from seed by sowing it in boxes and transplanting the plants to the open ground when danger of frost is past, when they will flower abundantly all summer.

Verbena Hybrida-Mixed colors. Pkt. 8c., 3 pkts. 20c. NEW MAMMOTH-This new strain produces the largest and handsomest flowers, and is the finest strain of Verbenas in cultivation. Mixed colors. Pkt. 10c., 3 pkts, 25c.

WALLFLOWER.

A half-hardy perennial, easily grown from good seed either in a box in the house or in the open ground. Get

SALPIGLOSSIS.

three packets of the seed. Sow one packet in a box in the house and the other two in a warm border in the garden. The plants are perennial, but in this climate need to be taken up for the winter.

Wallflower, Largest Flowered, Single, Mixed Colors Pkt. 5c., 3 pkts. 12c.

Covent Carden-The finest double variety. Pkt. 10c., 3 pkts. 25c.

ZINNIA.

The Zinnia is admirably adapted to our climate. It is remarkably healthy and vigorous, easily grown and

flowers abundantly. It has been vastly improved. Many of the flowers are as large and double as a dahlia, and of beautiful colors. Sow early in the spring in rows 15 or 20 inches apart and thin out the plants before they begin to crowd.

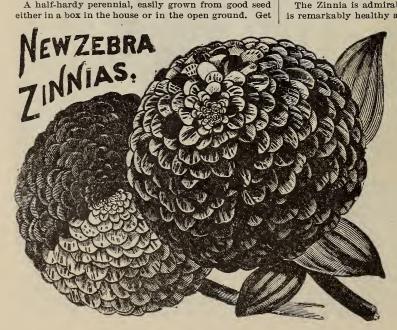

NEW ZEBRA ZINNIAS-

Very large double flowers, many of which are striped with two or three different colors, which gives a very attractive appearance to the flowers. Pkt. 5c., 3 pkts. 12c.

Dwarf Double Zinnia-Dwarf plant, double flowers of beautiful colors. Pkt. 5c., 3 pkts.

NEW DOUBLE GIANT-

(Grandistora Robusta Plenissima-Mixed colors. A splendid new variety with flowers of great size and beauty. Pkt. 5c. 3 pkts. 12c.

Flowering Plants and Bulbs.

The following flowers are best grown from roots set out in the spring. We pack the roots carefully and guarantee their delivery in good condition.

BEGONIAS.

These new, large flowering Begonias are magnificent plants for beds in the open ground. One who has not seen them can hardly imagine the brilliant and georgous effect produced by their large richly-colored foliage, and their beautiful, waxy flowers of bright and varied colors. If the bulbs are started early the plants will commence to flower in July and continue in constant bloom until frost. The flowers are from three to four inches across, and are produced in great profusion, almost covering the plant from sight. A bed of these Begonias will excite the admiration of all beholders, and be a constant delight to its owner. The bulbs should be started about the first of April in small pots plunged in boxes of earth in the house or hot-bed, and the plants set out in open ground as soon as all danger of frost is over.

Bulbs—Mixed colors, 10c. each, dozen 70c., 2 dozen \$1.25, postpaid.

CANNAS.

For lawn decorations there is no plant equal to the improved varieties of Cannas. Their bright, luxuriant foliage and long spikes of brilliant flowers make a beautiful display in beds and borders.

CULTURE—To get early flowering plants the bulbs should be started in pots plunged in earth and placed in a warm window or in a hot-bed about April 1st, and the plants put out in the open ground when danger of frost is over. Or set out the bulbs in the spring when the ground has become warm. The soil should be made very rich by applying manure or fertilizers. Set out the bulbs 18 inches apart each way, and cover them 2 inches deep with earth. The bed should be watered during dry weather.

ITALIA CANNA.

NEW LARGE-FLOWERING FRENCH CANNAS

These new improved Cannas are so much superior to the old varieties that they are now universally used. They bloom early and the flowers are twice the size of the common Cannas. We offer a few of the best varieties.

Madam Crozy—The most popular variety.
Plants grow only 3 to 4 feet high, and produce flowers of the largest size. Color deep scarlet, edged with gold. The foliage is green and very handsome. Dormant bulbs 10c, each, \$1.00 per dozen, postpaid.

Alphonse Bouvier—Flowers a rich glowing crimson; large and handsome; foliage dark green. Plant grows six feet tall, and is best suited for the center of the bed, where it is very effective. Dormant bulbs 10c. each, \$1.00 per dozen.

Charles Henderson — The finest crimson-flowered canna of dwarf habit; grows about three feet high; foliage dark green with purple stems. Flowers large and of a rich glowing crimson with yellow at the throat, Bulbs 10c, each, \$100 per dozen.

Florence Vaughan - Flowers deep yellow, mottled with crimson. A profuse bloomer and flowers of the largest size. Bulbs 10c. each, \$1.00 per dozen.

We will send one bulb of each of the above four varieties for 35c., or two bulbs of each kind for 60c.

Canna Bulbs by Express—We will send any of the Cannas named above, by express, for 75c. per dozen. The bulbs can be sent with seeds, etc., with little or no additional expense.

NEW ORCHID-FLOWERING CANNAS.

These new varieties produce flowers of the largest size and of the most perfect form. The flowers are produced in clusters on the spikes, presenting a mass of bloom when well grown.

BURBANK—One of the most beautiful of all

Cannas. The flowers are of immense size, clear

golden yellow, except in the center, where they are spotted with crimson. The plant grows about five feet high, and produces numerous spikes of flowers. The foliage is bright green, strong and healthy. Bulbs 15c. each, 3 for 49c, dozen \$1.30, postpaid.

ITALIA—This is like the Burbank, except that the flowers are brilliant red bordered with yellow, as shown in our cut. A very ornamental flowering plant. Height about five feet. Bulbs 15c. each, 3 for 40c., dozen \$1.30.

DAHLIAS.

The new Cactus Dahlias are the most beautiful of all the varieties of this popular flower. The flowers grow on long stems and have peculiar twisted petals, which relieves the stiffness so objectionable in the other kinds. The flowers are of the largest size. We offer a few of the most desirable kinds.

Fireball—Yellow, edged and striped with red. Very showy and handsome.

Clifford W. Bruton—A beautiful shade of rich golden yellow. Flowers very large and handsome.

very large and handsome.

Henry Patrick—Pure white; has very long stems and fine form. Blooms early and profusely.

Miss Arnold—Deep pink; flowers large and blooms early.

Prices of above Dahlias—We send large, field-grown roots of any of the above varieties, postpaid, for 20c. each; 4 for 70c.; or by express not prepaid, \$1.25 per dozen.

GLADIOLUS.

The Gladiolus is one of the most ornamental and attractive of flowering bulbs. The spikes of flowers grow two feet or more high, the flowers being of every shade of color and beautifully marked. When planted in beds or borders they make a most gorgeous show. The bulbs can be set out any time from the middle of April to the first of June, and will always flower the first year. Set out the bulbs about 8 to 10 inches apart and 3 or 4 inches deep. In the fall, after they have flowered, they should be taken up and stored in a dry place over winter.

finest large-flowering varieties of Gladiolus. About half are of light shades of color. This mixture is much superior to ordinary seedling gladiolus, and is equal or superior to any mixture obtainable. Price, postpaid, 2 bulbs 10c., dozen 4.c., 10 bulbs \$1.60. By express, 50 bulbs \$1.25, 100 bulbs \$2.00. 100 bulbs \$2.00.

RUDBECKIA-"GOLDEN GLOW."

GLADIOLUS.

PÆONIES.

The new large-flowering pæonies produce most magnificent flowers, resembling immense roses. and are of beautiful colors, being very much superior to the old fashioned kind. They are perfectly hardy and will improve year after year. We offer some of the best new colors, all with very large double flowers.

FESTIVA MAXIMA-White with dashes of red in center. Magnificent large double flowers.

Limbata-Rose color, large flowers.

Fragrans-One of the finest pink varieties.

Fulgrans-Bright crimson, large flowers.

Price-Strong plants 25c. each, or the four for 85c., postpaid,

TUBEROSES.

Tuberoses are very easily raised in the open ground in the summer, and are very ornamental. The flowers have an intensely sweet fragrance. The bulbs should be set out as soon as the soil is warm in spring, and will flower in August and September.

Excelsior Dwarf Pearl-The best variety. Flowers large, pure white and double, and crowded on the stalk. Large bulbs 5c. each, per dozen 40c., by mail, postpaid.

RUDBECKIA—"GOLDEN GLOW."

This new hardy plant is very ornamental, growing 4 to 5 feet high, with bright yellow double flowers. The flowers are shown in our engraving, which is from a photograph. They have long stems and are not only handsome on the plant but also make beautiful cut flowers. The plants grow very rapidly and bloom early in the summer and continue in bloom until killed by frost. They are perfectly hardy and bloom more profusely each year. The plants should be watered in very dry weather. Strong roots 10c. each, 6 for 50c., 12 for S5c., postpaid.

LARGE HARDY PLANTS . BAT OF PRICES.

Everyone who has a garden or lawn should have a few Hardy Hybrid Perpetual Roses. Everyone admires a beautiful rose, but few appreciate how easily they can be raised and what a pleasure it is to have an abundance of magnificent, large, fragrant roses on their own grounds. In our experience we have found that the only really satisfactory plants to set out are good, strong outdoor grown plants of varieties classed as "hybrid perpetuals." The small, greenhouse grown plants offered by most dealers do not as a rule amount to much, and even if they live do not flower the first season. Monthly or ever-blooming roses cannot be grown in the open ground in the Northern States with any degree of satisfaction by the ordinary gardener. Hybrid perpetual roses are all perfectly hardy and flower in June and July and again in September and October, and the flowers are very large and beautiful, much superior to the old "June roses."

We have selected ten of the most satisfactory varieties, such as have flowers of the best form and colors, and that have hardy, vigorous plants not affected with mildew. The plants we offer are 2 years old, grown in the open ground and will flower the first season if set out early in the spring. These plants are dormant and must be set out early before the leaves come out. Order early and the plants will be sent at the proper time to set out. If ordered late in the spring we cannot guarantee the plants to live.

If ordered fate in the spring we cannot guarantee the plants to five

THE BEST HARDY ROSES.

We especially recommend the varieties printed in capitals. Our plants (excepting one variety) are all grown "on their own roots" so they will not "sport" or throw up suckers that soon destroy the plants if left to grow, as do budded or grafted plants.

ANNE DE DIESBACH—An exquisite shade of bright pink; flowers very large, fragrant and of beautiful form. Plant a vigorous grower. One of the very best kinds.

John Hopper-Bright rose color, very large and

MARCARET DICKSON—A new white rose of great beauty. The flowers are of the handsomest form; large and deliciously fragrant; perfectly hardy and a profuse bloomer.

CLIO—A new *light pink* rose of great beauty. Flowers very large and of most delicate texture and coloring.

MARCHIONESS OF LORNE—A new bright red rose remarkable for its *perpetual flowering*. Flowers large, cup-shaped and very fragrant. Plant of vigorous growth and healthy.

Magna Charta—A beautiful flesh-colored rose;

CENERAL JACQUEM: NOT—Flowers brilliant crimson, large and very fragrant; a strong grower and perfectly hardy. On the whole, the very best and most popular red rose.

MME. CABRIEL LUIZET—A new rose of great beauty; color silvery pink. The flowers are large and full, with curled petals. One of the most beautiful of all hardy roses. Budded plants.

Prince Camille de Rohan—One of the darkest of all red roses; petals have a beautiful velvety texture; very fragrant.

Ulrich Brunner—Bright cherry red; flowers large, cup-shaped and fragrant; a vigorous grower. Very handsome.

PRICE OF PLANTS.

We offer large, 2 years old, field-grown plants of the above varieties at the following low prices:

Plants by mail, or express, prepaid, any of the above varieties, £5c. each; 6 plants for \$1.10, or your selection of 10 plants for \$1.85.

Plants by express, not prepaid, 10 plants \$1.50, or any greater number at 12c. each.

NEW CLIMBING ROSES,

CRIMSON AND YELLOW RAMBLERS.

These new Climbing Roses are of wonderful vigor, growing, when well established, eight or ten feet in a single season. The flowers are produced in immense clusters. The individual flowers are of medium size, fine form and perfectly double. These Roses will be

MARGARET DICKSON.

found very useful for decorative plants, as they can be trained to grow over the side of a house or piazza. They are perfectly hardy and will bloom for a long time during the summer and fall.

Crimson Rambler—Color deep red; strong two-year old plants, from open ground. By mail, postpaid, 30c. each, 3 plants 75c.

Yellow Rambler—New. The finest hardy yellow climbing rose. Strong one-year old plants from open ground 30c. each, 3 plants 75c., postpaid.

One plant each of Crimson and Yellow Rambler, postpaid, for 50c., or 3 Crimson and 2 Yellow for \$1.00.

SMALL FRUIT PLANTS.

Do Not Buy Plants From Agents, but get them direct from the grower. The plants will not only be much better but they will cost you very much less. We should be glad to quote special prices on any list of plants that you may want, even if it includes some varieties which are not in our catalogue. Rochester is one of the largest nursery centers in this country, and we are always able to get first-class stock of most varieties from other growers here at low prices.

Order Early. Early orders are of course filled first, and the plants sent in the best possible condition. All plants except strawberries should be ordered before April 1st. Later orders will be filled as fast as possible, but the plants are never as satisfactory as those sent before the buds start.

STRAWBERRIES.

The best time to set out strawberries is in the spring when they will grow all summer and form a good bed of plants that will bear profusely the following year.

The plants should be set out in good rich ground in rows 2½ to 3 feet apart and the plants a foot apart in the rows. When setting the plants in dry soil take a spade and run it straight down into the ground, making a narrow deep hole; into this place the roots of the plant spread fan-shaped, with the crown of the plant slightly below the surface of the ground, and with the spade placed in the ground six inches away, press the earth up against the plant firmly. It is best to set out the plants as soon as the ground can be gotten into good condition in the spring, but they will do very well if set out as late as the middle of May.

Varieties marked (P) have pistillate or imperfect flowers and should have some other perfect-flowering variety growing near to fertilize the flowers. Use one perfectflowering plant to every three or four imperfect-flowering plants.

ECHO.

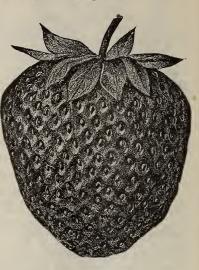

A New Strawberry of Exquisite Flavor.

There is not enough attention paid to quality in strawberries. Varieties that are raised to sell in market must be large and showy, but the quality is a secondary matter. For home use, however, we want a really fine flavored berry. This we have in the ECHO. This strawberry is not only of very high flavor but it is also productive and of large size, a combination we have not hitherto seen. It is medium early. Everyone who appreciates a good strawberry should have some of the ECHO. The flowers are perfect or self-fertilizing. By mall, dozen 35c., 50 plants \$1.00, 100 plants \$1.75. By express, \$1.50 per 100.

VAN DEMAN. The Earliest.—On our grounds this has proved to be the earliest strawberry. It does not merely give a few early berries but ripens the whole crop very early and within a short time. The berries are of good size, bright crimson, firm and of excellent flavor. The plants are vigorous and productive. By mail, dozen 35c., 100\$1.25. By express, 100\$1.00, 1000\$6.00.

BRANDYWINE—This new variety has proved to be one of the best medium to late strawberries. The berries are very large, firm, bright red, and of first-class quality. The plants are remarkably vigorous and healthy and produce very large crops and continue bearing late in the season. Its fine quality, large size and productiveness make it a superior variety for home use or market. By mail, dozen 30c., 100 85c. By express, 100 65c., 1,000 \$4.50.

CANDY—It is just as important to have a very late strawberry as a very early one. The late ones, in fact, are often the most profitable for market, and for home use we want strawberries as long as we can get them. The Gandy supplies this want. It is a very late berry and the fruit is large, firm, of fine color and good quality. The plants are vigorous and productive. Flowers perfect By mail, dozen 25c., 100 85c. By express, 100 65c., 1,000 \$4.00.

BUBACH (P)—One of the largest of all strawberries. The berries are often 1½ to 2 inches in diameter and of good quality. The vines are very vigorous and productive. The fruit is rather soft for shipping long distances, but for near market its great size and handsome appearance make it command the highest prices By mail, dozen 25c., 100 85c. By express, 100 65c., 1,000 \$4.00.

CLYDE — Probably the most productive variety having large size berries. Plants very vigorous and they produce enormous quantities of fruit of good quality. The berries are of large size and handsome shape, and quite firm. This is a great market variety as well as a good one for home use. By mail, dozen 25c., 100 85c. By express, 100 65c., 1,000 \$4.00.

NICK OHMER—A new variety of immense size. Fruit dark glossy red and quite firm. Plants of vigorous, robust habit and very productive. One of the finest new strawberries and should be largely grown. By mail, dozen 30c., 100 \$1.25. By express, 100 \$1.00, 1,000 \$7.00.

CREENVILLE (P)—This is a magnificent strawberry. The plants are stocky, with large, vigorous, dark green leaves. The quality is excellent. The plants are very vigorous and wonderfully productive. This, together with its large, showy fruit and good shipping qualities, places the Greenville in the front rank. By mall, dozen 25c., 100 85c. By express, 100 65c., 1000\$4.

Wilson—There is still no variety equal to the old Wilson for canning. When fully ripe it is of high flavor and 'excellent for the table. It is early and productive. By mail, dozen 25c., 100 85c. By express, 100 65c., 1,000 \$3.75.

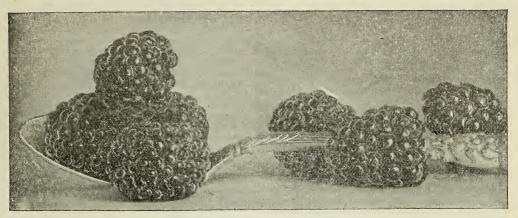

SPECIAL COLLECTION

Of the Three Best Strawberries.

We will send a collection of 20 Plants of VAN DEMAN (the earliest), 40 of BRANDY-WINE (medium) and 40 of GANDY (the latest), 100 plants in all, BY MAIL, POSTPAID, for \$1.00. These will make a nice strawberry bed of the finest varieties grown.

BLACK RASPBERRIES, or Black Caps.

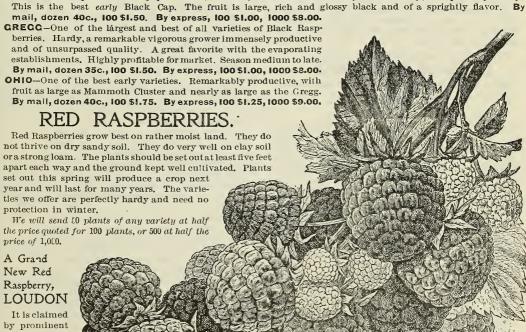

"Black Caps" are so easily grown and bear so enormously that every one should have some in the garde... They do best on moist or rather heavy land, but will succeed almost anywhere.

CUMBERLAND RASPBERRY COMPARED WITH WILSON BLACKBERRY.

CUMBERLAND-A New Black Cap of Immense Size.

Black Caps are apt to be small and seedy as every one knows, so the new variety will be most welcome. The berries grow larger than any other variety and resemble Blackberries in size and shape, as shown in the photograph. The Cumberland, in fact, is supposed to have a little blackberry blood in it, which gives the fruit its enormous size and elongated form. The plant is of remarkable vigor and wonderfully productive. The fruit sold for 10c. per quart when other varieties were selling for act to 7c. The Cumberland is a medium early variety following closely after Palmer and Ohio. The plant is perfectly hardy. This is certainly the finest Black Cap ever produced and every one should have some of them. PRICE-By mail, each loc., dozen 75c. By express, \$4.00 per 100. PALMER—The plants are very productive, more so, it is claimed than any other variety, and perfectly hardy.

horticulturists that this is the coming Red Raspberry. Mr. E. S. Carman, editor of the Rural New Yorker, and

an authority on fruits, says: "As judged at the Rural grounds, the Loudon is the best Red Raspberry in existence." The plants are very vigorous and produce enormous crops of fruit, which commences to ripen very early and continue as long as the latest varieties. The fruit is large, of fine color and very firm. The Loudon seems likely to supersede all other varieties for the market.

Mr. J. H. Hale, the well-known Horticulturist, says: "The Loudon certainly is the largest, firmest and best flavored mid-season Red Raspberry now well tested." Strong, transplanted plants by mail, IOc. each, dozen 50c. By express, dozen 35c., 100 \$2.00.

CUTHBERT—A remarkable hardy, prolific, firm red raspberry. When you have the Cuthbert you are nearly always sure of a crop. The berries are extra large, sometimes three inches in circumference, remarkably firm and of excellent quality, conical in shape, of a rich crimson color. Season medium to late. Canes vigorous and perfectly hardy. By mail, 1-2 dozen 20c., dozen 35c., 100 \$1.35. By express, 100 \$1.00, 1000 \$7.50.

COLDEN QUEEN—This is the finest Yellow Raspberry. It resembles the Cuthbert in all respects except in color which is a beautiful golden yellow, making the berries very attractive in appearance. By mail, dozen 40c., 50 \$1.00. By express, 100 \$1.50.

MARLBORO—One of the largest and best early raspberries. Hardy and productive. The berries are bright scarlet and very attractive; quality first-class. Dozen 40c., 100 \$1.85. By express, 100 \$1.50.

Shaffer's Colossal—Supposed to be a cross between a Black Cap and a Red Raspberry. The plant has the habit of the Black Cap varieties, being propagated by layers, while the fruit has the size and general characteristics of the red varieties. The berries are very large soft, juicy and fine flavored. Color very dark red; plant perfectly hardy, a vigorous grower and very productive. An excellent variety for canning. By mail, 1-2 dozen 20c., dozen 35c., 100 \$1.75. By express, 100 \$1.25, 1000 \$9.00.

BLACKBERRIES.

Plant in rows 6 feet apart and 4 feet apart in the rows.

RATHBUN.

A Wonderfully Large Blackberry.

This new Blackberry is so distinct in appearance and habit of growth that it might almost be considered a new fruit. Instead of producing "suckers" from the roots like other Blackberries it propagates itself by rooting at the tips of the branches like a Black Cap Raspberry.

The Fruit is simply enormous, far larger than other Blackberries and the *quality is superb*. There is no hard core as in other varieties, the whole fruit being soft, luscious and high flavored, and yet sufficiently firm to stand handling well.

The plants are very hardy, robust and vigorous growers and produce very few suckers. This is a remarkable fruit and should be extensively planted.

By mail, 10c. each, dozen 75c., 100 \$4.50. By express, \$4 per 100.

which has become very popular. It is not only very hardy but the berries are large and of fine quality, while the plant is a wonderfully vigorous grower and remarkably productive. Season medium to late. Undoubtedly one of the best varieties for market or home use. By mail, dozen 50c., 100 \$3. By express, 100 \$2.50.

LAWTON-A well-known variety. Canes not as hardy as the Kittatinny. Fruit large, and when ripe is sweet, juicy and of the highest quality. By mail, dozen 50c., 100 \$2.50. By express, 100 \$2.00.

KITTATINNY—This is one of the best varieties. Canes very vigorous, hardy and exceedingly productive. Fruit of the largest size, specimens measuring 1½ inches long. Firm, sweet, rich flavor, juicy and of the highest quality. By mail, dozen 50c., 100 \$2.50. By express, 100 \$2.00.

SNYDER—A very hardy Blackberry, standing our most severe winters without protection. Berries rather small but ripen early and are sweet, juicy and good flavored. One of the very best varieties for the North. By mail, dozen 50c., 100 \$2.00. By express, 100 \$1.50.

Ripensa week to 10 days earlier than other blackberry. Ripensa week to 10 days earlier than other blackberries. Fruit very large, soft, juicy and of fine flavor. A vigorous grower and perfectly hardy. The fruit is perhaps too soft for market, but fine for home use. By mail, each 10c., dozen 80c., 100 \$4.00.

CURRANTS.

Set the plants 4 feet apart in the row and the rows 6 feet apart. Give clean culture and mulch with coarse manure.

VICTORIA CURRANT—The Victoria is the most popular variety of Currants. The bush is of great vigor and hardiness and the fruit is of good size and produced on long stems. In our experience it is by far the most productive variety, bushes of the same age as Cherry or Fay's yielding nearly double the quantity of fruit. Another great advantage is that it is late in ripening, and therefore, can be marketed after other Currants are gone, when much higher prices are obtained. We have always sold our later pickings at higher prices than those sold first. They are a very profitable crop. PRICE—By mail, good, strong, one-year old plants, each loc., dozen 55c. By express, one-year-old plants, dozen 40c., 100 \$3.25.

Red Dutch—The M.chigan Experiment Station, after growing all the different varieties of currants, says: "Red Dutch, although one of the oldest varieties, yet stands first among the red currants so far as quality as well as productiveness is concerned."

PRICE-Same as Victoria.

Cherry—The largest and most popular currant. Bushes not as vigorous as Red Dutch. Needs the best of soil and culture. When it does well it is one of the most profitable varieties. PRICE—Same as Victoria.

White Grape—Fruit white; bunches not so long as Red Dutch, but the fruit is of good size, remarkably handsome and of the highest quality. Best variety for the table. It also makes beautiful and delicately flavored jelly. PRICE—Same as Victoria,

FAY'S PROLIFIC—This is a much talked of and highly praised variety. Fruit about the size of the Cherry Currant, but with larger bunches. PRICE—Same as Victoria.

RED CROSS—A new Red Currant of large size and great productiveness. We have not yet fruited it, but it is claimed to be a perfect wonder in size and yield. It should be given a trial. PRICE—One-year-old plants, by mall, 15c. each, dozen \$1.00.

Black Naples—The best variety of Black Currants. A vigorous grower; fruit very large, sometimes nearly three-fourths inch in diameter. There is quite a demand for Black Currants, and their cultivation is highly profitable. They are not attacked by the currant worm. PRICE—Same as Victoria.

GOOSEBERRIES,

The best American varieties of gooseberries are as easily raised as currants, and produce very nice fruit, which is delicious in pies, jams, etc., and sells for profitable prices in the market. The cultivation of Gooseberries is the same as that of currants.

PEARL GOOSEBERRY.

A Large, White Gooseberry that Does NOT Mildew.

The editor of the Rural New Yorker, says: "The Pearl is as productive as anything we have on trial. The berries are larger than Downing and of excellent quality. Neither the foliage nor the berries show the slightest trace of mildew."

This new gooseberry is of such wonderful productiveness that the bushes present a perfect mass of fruit. But nevertheless the fruit is of large size and first-class quality. The fruit resembles the Downing, but is larger and the bush much more prolific, and is not affected by mildew. This is the coming green gooseberry, and will prove very profitable to all who grow it.

PRICE—By mail, strong plants, each 15c., dozen 75c. By express, fine 1 year old plants, dozen 60c., 100 \$3.50.

RED JACKET—This is the largest and most vigorous red gooseberry. The fruit is as large and fine as the English varieties, while the plant is entirely free from the mildew which is so destructive to these varieties when grown in this country. The plants are very productive and the fruit is handsome and of the best quality. A superior variety for home use and very profitable for market.

PRICE-Strong plants by mail, postpaid, 20c. each, dozen \$1.25. By express, dozen \$1.00, 100 \$6.50.

Smith's improved—With good cultivation, a vigorous grower and immensely productive. Fruit large, pale yellow, and of superior quality.

PRICE—Strong plants by mail, each 15c., dozen \$1.25. By express, dozen 85c.

Downing—This has long been considered the best American green gooseberry. Fruit large, green when ripe, and of excellent quality. Bush a vigorous grower and seldom affected by the mildew.

PRICE—Strong plants by mail, each loc., dozen 50c. By express, dozen 40c., 100 \$3.50.

Houghton—The standard variety, Enormously productive; free from mildew. Fruit medium size, pale red, sweet and good. No garden should be without it.

PRICE—Strong plants by mail, each loc., dozen 50c. By express, dozen 40c., 100 \$3.50.

SPECIAL LOW PRICES given for larger lots of Currants and Cooseberries. Please write us giving the varletles and about the quantities wanted.

GRAPE VINES.

Everyone who has any land at all should set out a few grape vines. After the vines are once started they last for a great many years, and it is little trouble to take care of them. We have had large crops from a vine which runs wild over an apple tree. Send for a few vines; they will come postpaid by mail. Set them out, and in a few years you will be enjoying their delicious fruit. Recollect, the vines we offer are not small one-year-olds, such as are usually sent by mail, but good two-year-old vines that will grow and give good satisfaction.

Delaware—Light red. One of the most delicious and high-flavored grapes. No one should be without it.

Worden—A magnificent and delicious grape, very similar to Concord, but earlier and larger and equally hardy and prolific, and of far better quality.

Concord—Black. The best known and most popular of all grapes. Early, hardy, a vigorous grower and enormously productive.

Salem—Red. A superb grape; one of the best of Rogers seedlings. Large and of very fine quality. Vines hardy, vigorous and productive. Medium early.

Brighton—Red. A magnificent grape; large, handsome, and nearly if not quite equal in flavor to the Delaware, and far larger. Vines vigorous and hardy and very productive. We can confidently recommend it,

Moore's Early-Black. Of all the early grapes this is the largest and best. Vines hardy and productive.

Niagara—White. One of the most popular of white grapes; as vigorous and hardy as Concord. Fruit very large and handsome.

moore's Diamond—White. New; the best and most promising of all varieties of white grapes. It is a fine native grape, a cross between Concord and Iona. In size it is as large as Concord, with compact, handsome bunches, and the quality is superb. They are far superior to any other white grape we have ever tasted.

PRICE OF ABOVE CRAPES.

Large two-year-old plants, by mail, each 20c., dozen \$1.25. By express, dozen \$1.00, 25 plants \$1.85.

VEGETABLE PLANTS.

CABBAGE, CAULIFLOWER, and CELERY Plants Crown in Enormous Quantities. TOMATO Plants, in any Quantity, by Mail or Express.

We grow great quantities of late Cabbage, Cauliflower and Celery plants, and can furnish them in any quantity desired at very low prices. The Cabbage and Cauliflower plants will be ready to ship about June 1st, and from then until August 1st we aim to have a constant supply of plants in the best condition. Celery plants ready the last of June. Orders booked at any time and plants sent when wanted. We make no charge for packing and guarantee the safe delivery of the plants in good condition.

When in need of plants, please write us for prices on the quantity desired.

	By Mail, Postpaid.	By Express, not Prepaid.

Hardy Bronze Curkeys.

Pure Mammoth Bronze Crossed with Wild Curkey

YOUNG HARDY BRONZE TURKEYS.—(Photograph taken November, 1899.)

A few years ago the Rhode Island Experiment Station discovered by experiments that Bronze Turkeys crossed with wild stock produced hardier, healthier and more vigorous Turkeys than the pure Bronze. We have now been raising these Bronze-Wild crosses for three or four years and are much pleased with them. They are not only healthy and vigorous but they mature earlier than the pure Bronze, so that the young turkeys attain nearly their full size by Christmas time, and they are nearly if not quite as large as the largest turkeys raised.

We have a very fine half-wild gobbler. He was raised in Pennsylvania from a pure wild turkey. Having a flock of very large pure Bronze hens, we are able to offer some exceptionally fine stock having one-fourth wild blood. We did not lose a single young turkey from disease of any kind the past season. We highly recommend this strain for crossing with Bronze or other breeds to give health and vigor to the young turkeys. We offer a limited number of extra fine young gobblers and hens as follows:

> Gobbiers, early hatched, large and handsome, each \$6.00 We do not Sell Turkey Eggs.

We have to-day (Dec. 20th) received the following letter:

have to-day (Dec. 20th) received the following letter:

"Portchester, N. Y., Dec. 19, 1899.

"Dear Sirs—The gobbler arrived here in fine condition last Friday. He is a beautiful bird and I am very much pleased CHAS. E. PURDY."

Cotswold Sheep - Our Improved American Strain.

The Cotswold Sheep, as is well known, is one of the very largest breeds, and has the capacity of laying on more fat than any other kind. The objections to them are that they grow too large and coarse, and their wool is too coarse and not thick enough. These objections apply to the English and Canadian Cotswolds, but by careful breeding for over 30 years we have developed a strain that is so superior to the old Cotswolds that it could with propriety be classed as a distinct breed.

The principal characteristics of our Cotswolds are:

A HEAVY FLEECE of medium coarse, long wool. Rams shear from 12 to 18 lbs. of wool and ewes 10 to 15 lbs. The wool sells at the very highest price.

Head fine with small ears and heavy foretop. Rapid growth and capacity for taking on fat that is remarkable. Some of our lambs weighed last summer over 100 lbs. when 4 months old, and 135 lbs. on October 1st.

Vigor and Hardiness.-In this respect they are far superior to any other Cotswolds we have ever seen.

To Cross with Common Sheep.

For this purpose there is nothing equal to our strain of Cotswolds. The cross with sheep of the finer wool type give lambs of greatly increased size, rapid growth and remarkable capacity for getting fat. In addition to this, the cross gives sheep with very heavy fleeces. The Cotswold blood gives the length or staple so lacking in the finer wool breeds. We do not advise anyone to raise pure-bred sheep for market or wool. But we do advise the use of pure-bred rams always. Never use a cross-bred ram. Get good ewes of as near a uniform type as possible and cross with one of our Improved Cotswold rams and the results will be satisfactory every time. Every breeder who has made this cross has been more than satisfied with the results.

Stock For Sale.

We have some very fine rams for sale and hope to have a lot of ram lambs in the fall of 1900. Description and prices given by letter at any time. If you are interested in sheep, please send us your name and address and we will send you description and prices of the rams we have to offer next summer.

Pure Unmixed Fertilizing Materials.

WE have for many years been advising farmers to mix their own fertilizers, instead of buying the mixed or so-called "complete fertilizers," so commonly sold. We have been using the unmixed materials for many years and have found that we could save nearly one-half what we would have to pay for the same materials mixed together and sold under some "brand." There is very little trouble in mixing the materials together if it is more convenient to use them mixed than separately. The mixing can be done on a "rainy day," and practically costs nothing, while there is a difference in the cost of the materials bought separately and bought ready mixed of \$8.00 to \$15.00 per ton.

Hdvantages of Buying In summing up the advantages of buying plant-food in the form of unmixed materials instead of in mixed or "complete" fertilizers, we have: First-A Unmixed Materials. great saving in cost. This is a very important point, and often makes

the difference between profit and loss in the use of fertilizers. Second-The nitrogen (ammonia) can be obtained in the form most suited to the crop and other conditions. This is also very important, as in most mixed fertilizers the nitrogen is in a form that is not immediately available, and so does not produce as good results as are obtained from the use of a more soluble and available form. Third-The different ingredients can be applied either together or separately, as most convenient, and at the time and manner most suited to the conditions under which they are used.

We shall be glad to send to anyone who has not already received it, a 40-Directions for Using page pamphlet entitled "Food for Plants," containing complete directions Fertilizing Materials. for mixing and applying fertilizers, and suggestions as to what to use on different crops. We can furnish fertilizing materials of the best grade, delivered on cars at New York City or at Rochester, at lowest market rates. Prices depend a great deal upon the quantity required. It costs nearly as much to ship a bag as a ton. Very small quantities that have to be re-bagged have to be shipped from Rochester, and the cost is necessarily considerably greater than for larger quantities.

TERMS-Strictly Cash with Order.

Nitrate of Soda.

Nitrate comes from South America in bags of When shipped to this about 300 pounds each. country the original bags are covered with an outside bag which prevents loss. When ordered in side bag which prevents loss. When ordered in even bag lots—300 pounds, 600 pounds, 900 pounds, etc.—we ship direct from New York. Smaller quantities than 300 pounds are shipped from Rochester.

Guaranteed Analysis-95 to 97 per cent. pure nitrate of soda, containing 15% to 16 per cent. pure interest of soda, containing 15% to 16 per cent. nitrogen (equal to 18 or 19 per cent. of ammonia).

Pure Bone Meal, or Bone Dust.

This is an economical fertilizer for fruit trees, This is an economical fertilizer for fruit trees, grass lands, small fruits, and wherever a lasting fertilizer is needed. The phosphoric acid is not soluble as in superphosphate, but becomes slowly available to the plants. The bone meal we offer is ground very fine and contains 27 to 30 per cent, phosphoric acid and 1 to 1½ per cent, nitrogen, The New York Experiment Station gives the analysis as nitrogen 1 47 per cent., phosphoric acid 31.12 per cent. This makes a value of \$29.00 per ton. We can furnish this bone meal as follows:

Shipped from Rochester. 50 pounds, \$1.00 100 pounds, \$1.75 10 pounds, 35c Shipped from New York.

Barrels containing 250 pounds......\$ 3.50

Superphosphate.

This superphosphate of lime is of high grade and in perfect condition for drilling, being very fine and dry

Fertilizers for

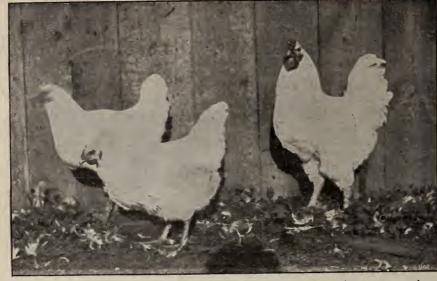

A thrifty, dark green, luxuriant growth of grass on a lawn adds more to the attractiveness and beauty of grounds than almost anything else. To obtain Lawns and Gardens. this, people often cover their lawns with stable manure, and endure the foul

odors and disreputable appearance of their grounds all winter. This discomfort and annoyance is entirely unnecessary. The same amount of plant food contained in the manure can be furnished to the grass in the form of odorless chemical fertilizers, which will produce just as luxuriant growth of grass and lasting effect as the manure. The fertilizers should be applied early in the spring broadcast, at the rate of about two pounds of the mixture per 100 square feet. In order to accommodate our customers who do not want the trouble of mixing the materials, we will send a mixture composed of superphosphate, nitrate of soda and muriate of potash in the proper proportions at the following prices:

100 lbs.....\$2,75 200 lbs.....\$5.00 50 lbs.....\$1.75

This mixture will be found very effective as a fertilizer for all garden crops, as well as for small fruits, roses and other flowers.

White Wyandotte Chickens.

Photograph of Our White Wyandotte Chickens When Only 7 Months Old.-(November, 1899.)

There are other kinds that have some good qualities, but are lacking in others, while the White Wyandottes seem to possess all the most desirable qualities in a marked degree. In the first place they are very handsome birds to have about the place. Their snow-white plumage, handsome shape, bright red combs and yellow legs make them very ornamental. But what is more important, they are wonderful winter layers. Last winter we had two weeks of very cold weather in February, when very few people got any eggs from their hens and the price went up to 40 cents per dozen. During this time, as well as before and after it, we got an average of 60 eggs (5 dozen) a day from 100 White Wyandotte hens in an ordinary hen house with no heat. Our hens also layed well during the whole summer and fall. The Leghorns are supposed to be the best layers, but they only lay in the spring and summer when eggs are cheap, while the White Wyandottes keep at it all the year around. In addition to all this they are perfection for early brollers. They mature with great rapidity and make nice plump chickens with yellow skin and legs, that always command the highest prices in market.

The White Plymouth Rocks are the White Wyandottes' most formidable rivals. Their only advantage, if it can be called one, is that they grow a little larger than the Wyandottes. But on the other hand they do not mature as

rapidly or make as plump a broiler as do the White Wyandottes, nor do they lay as well.

After raising Plymouth Rocks for a good many years we decided to try White Wyandottes, and have found them so superior that we have discarded all others. As we have but one breed on the place, we can let our chickens have free range and do not keep them shut up in yards, as others who breed more than one kind have to do. Our White Wyandottes are bred from the finest strains in this country and are perfectly pure. Not being confined in yards, as most pure-bred chickens are, our stock is remarkably vigorous and healthy, and is as fine as can be procured anywhere at double the prices we charge.

Crossing With Other Breeds. It is of great benefit to introduce White Wyandotte blood into flocks of common mixed breeds. The nearer they can be bred to the White Wyandotte type the better they will be, both as layers and for the table or market. To do this use nothing but pure-bred White Wyandotte cocks. By doing this for a few years the whole flock will soon get to possess all the good qualities of the pure White Wyandottes.

Prices of White Wyandottes.

We offer some very fine, strong, healthy, early-hatched birds at the following prices:

Cockerels -7 to 8 lbs., extra fine, handsome birds, such as are usually sold for \$5.00, - . - \$2.50 each Cockerels—Not quite so "fancy" as above, but good strong birds, suitable for crossing with common hens, - . - . \$1.50 each, 2 for \$2.50 Palr—One extra fine Cockerel and Pullet, - \$4.00 Trio—" " " 2 Pullets, - 5.50

Eggs for Hatching.

We can furnish Eggs from our own breeding stock, which has been selected with the greatest care. Our hens have open "scratching sheds" in which to exercise

in the winter, and every other advantage which tends to make the eggs fertile and the chickens strong and healthy. After March 1st we guarantee the eggs to be at least 80 per cent. fertile. We can furnish eggs before that date but they usually are not as fertile as those laid in the spring. The eggs will be carefully packed and we guarantee them to reach the purchaser in good order.

Prices—At the prices named the eggs are to be sent by express at the purchaser's expense.
